CHAPTER XXXV.

INSTITUTIONS FOR HIGHER EDUCATION.

CHANGES IN INSTITUTIONS.

- Georgia Female Seminary, Gainesville, Ga.—Name changed to Brenau College.
Chaddock College, Quincy, Ill.—Changed to Boys' Industrial School.
Oswego College for Young Ladies, Oswego, Kans.—Closed.
Keatchie College, Keatchie, La.—Changed to Louisiana Female College.
Minden Female College, Minden, La.—Closed.
Hamilton College, Watervalley, Miss.—Closed.
Northwest Missouri College, Albany, Mo.—Changed to Central Academy.
College of Montana, Deerlodge, Mont.—Closed.
Lafayette Seminary, Lafayette, Oreg.—Removed to Dallas, Oreg., and name changed to Dallas College.
Portland University, University Park, Oreg.—Consolidated with Willamette University, Salem, Oreg.
Black Hills College, Hot Springs, S. Dak.—Closed.
Nashville College for Young Ladies, Nashville, Tenn.—Closed.
Norfolk College for Young Ladies, Norfolk, Va.—Closed.
Colfax College, Colfax, Wash.—Closed.

CHANGES IN COURSES OF STUDY.

- Athens (Ala.) Female College.*—The course has been raised at least one year.
Southern University, Greensboro, Ala.—Requirements for admission to college classes raised to the amount of nearly a year's work.
University of Alabama.—Pedagogy has been added and options have been extended so that now students in college courses have practically free choice above sophomore year.
Central Baptist College, Conway, Ark.—The courses in French and German have each been changed from a two years' to a three years' course.
Hendrix College, Conway, Ark.—Master's degree will no longer be conferred. The college will devote its energies solely to undergraduate work.
University of Arkansas.—Department of elocution and physical culture (for girls mainly) has been organized.
California College, Oakland, Cal.—Henceforth to be a college only and strictly. After next year it will confer degrees of associate of arts and associate of letters for two years' course, demanding very high entrance requirements.
Trinity College, Hartford, Conn.—Established a complete department of natural history and appointed a professor and assistants in natural history.
Yale University, New Haven, Conn.—The following statement, taken from the Yale Alumni Weekly for February 6, 1901, shows the changes recently made in the curriculum of the academical department:

As a result of long and careful discussion by the academic faculty, the following changes in the college curriculum have been sanctioned by the corporation at their

meeting on January 20, 1901. They are embodied in the following general rules, which will go into effect with the beginning of the next academic year:

I. A candidate for the degree of bachelor of arts must successfully complete courses aggregating 60 hours per week through a year, but under the following conditions:

II. Freshmen shall take 15 hours per week, sophomores and juniors from 15 to 18 hours, seniors at least 12 hours.

(a) A student will be enrolled in the freshman class until he has completed at least 12 hours of work; he will then be enrolled in the sophomore class until he has completed at least 26 hours, including all requirements of freshman year; then in the junior class until he has completed at least 41 hours; then in the senior class until he has completed 60 hours.

(b) A student who is enrolled as freshman a second year may, if he desires, take 18 hours.

(c) A student in any of the three upper classes who desires to anticipate a course of the class in which he is enrolled by passing a special examination in it at the beginning of the year must apply to the dean, in writing, not later than September 1, for such an examination. The privilege is not open to those who have deficiencies due to failure in courses previously taken.

A course thus anticipated may, with the consent of the faculty, be counted as part of the requisite 60 hours. In its place the student may take an equal number of hours from the courses open to his own or to the next higher class, if he is otherwise qualified to do so. The course or courses chosen in place of the one anticipated must be stated in the application for the special examination.

Members of the incoming class desiring to avail themselves of this privilege must apply to the freshman committee, which is given power to carry these provisions into effect.

III. Each student must complete or offer the equivalent of connected courses of Grades A, B, and C, aggregating at least 7 hours, in one of the following three departments of study, and connected courses of Grades A and B, aggregating at least 5 hours, in each of the two other departments:

1. Languages and literature.
2. Mathematics and natural science.
3. Mental, historical, and political science.

IV. Each student must, in his freshman year, complete or offer the equivalent of courses in English, Greek, Latin, and mathematics, and in either French or German, aggregating $3 \times 5 = 15$ hours per week.

V. English A, Greek A, Latin A, and mathematics A must be taken not later than freshman year.

French A and German A not later than sophomore year.

History A not later than junior year.

Mental science not earlier than sophomore year.

Political science not earlier than junior year.

These rules are necessarily expressed in concise and technical language, and call for a general explanation, which is furnished by a member of the faculty.

Hereafter, the requirements for the bachelor's degree are divided under three heads:

First. Requirement as to quality of work.

Second. Requirement as to quantity of work.

Third. Requirement as to specific courses to be taken.

First. Requirement as to quality of work. In view of the growing range of subjects of study open to students, the danger of their dissipating their energies among a number of elementary courses, and of their not following a consistent plan in the selection of their work, has led to the adoption of a general rule which requires a high attainment in the pursuit of one line of work, and a less attainment in the pursuit of two other different lines of work.

For this purpose most of the important studies have been grouped under three departments:

I. Languages and literature, which includes the ancient languages, the modern languages, and English.

II. Mathematics and the natural sciences, namely, physics, chemistry, physiology, botany, geology, and mineralogy.

III. The mental, historical, and political sciences.

Within each of these three departments the courses are arranged in successive grades, corresponding with the successive grade of advancement in the pursuit of that line; for instance, freshman mathematics is Grade A, sophomore mathematics is Grade B, and the present advanced elective courses in mathematics are Grade C. Sophomore mediæval history is Grade A; junior American history, Grade B, and senior European history is Grade C.

In the case of each course of study, the other course or courses which it presupposes are indicated. So, for instance, elementary physics presupposes freshman mathematics and itself is introductory to laboratory physics; elementary physiology presupposes the inorganic chemistry course, and is introductory to the course in biology; the large junior course in elementary economics must precede those in money, banking, and industrial history, and these open the way to more advanced courses. A student is required to have completed courses of the first, second, and third grade in one of these three general departments, and courses of the first and second grade in each of the other two, following the sequence of courses as far as that will be indicated. In the case of some courses, their sequence will not be laid down, and they will stand by themselves. Other courses will not be grouped under any of the three general departments, such as those in Biblical literature, art, and music.

On the one hand, this rule will call for a certain degree of specialization on the part of each student, he being compelled to acquire a considerable degree of proficiency along a connected line of study. On the other hand, too great specialization will be prevented by the requirement that he also devote considerable time to two other lines of study not directly connected with his major courses.

The rule is aimed, then, at correcting the tendency on the part of some men to spread their work too much and scatter their energies in a variety of elementary courses, and also at that small class of men who devote all their energies exclusively to one line of study. The first class of students are the ones who, under the present arrangement, are in danger of not getting enough out of their college course; the other class of getting, so to speak, too much, in that they become fully equipped in one line to the exclusion of sufficient knowledge of other subjects.

When the prospectus of courses for 1901-1902 appears, it will arrange all the courses of study under these three grades and indicate the years when the first grade may be begun. So, for instance, languages and literature will, as heretofore, form the bulk of the work of the freshman year. The natural sciences may be begun in the sophomore year. Historical and philosophical studies may also be begun by sophomores, and political science, as heretofore, by juniors. The above quality requirement puts the emphasis upon the progressive character of the work done, not upon the amount of information accumulated by the student. It aims to educate him by developing his powers of reasoning and observation, instead of filling his mind with a mass of unrelated, though perhaps valuable, facts.

Second. Requirement as to quantity of work. The unit of computation is an hour per week in the class room during one year. A candidate for the degree of bachelor of arts must have completed sixty of these hours, which he will naturally distribute among the four years of his college course.

He will take 15 hours in freshman year, which will be devoted to five courses of 3 hours each, in mathematics, Latin, Greek, English, and in either French or German. A sophomore will choose between 15 and 18 hours of class-room work, taking five or six courses of 3 hours each, from among twelve offered him, in continuation of his freshman courses, and in physics, chemistry, history, and mental science. A junior will take from 15 to 18 hours a week of class-room work, choosing from a wide range of courses, either in continuation of his freshman and sophomore studies, or in beginning political science, or in the minor subjects of study, such as art, music, Biblical literature, etc. A senior will choose from 12 to 19 hours from a still wider range of courses. * * *

Heretofore a number of men have been admitted to the freshman class who were especially well prepared in some subjects and quite able to omit the course in those subjects offered to their class, and pass on at once to the advanced course in the subjects offered to sophomores. Under the new plan, these men would be encouraged to at once anticipate that part of their freshman year's work by an examination, getting credit for so many hours toward the total of sixty, and be admitted at once to an advanced course, for instance, in one of the modern languages or in mathematics. Another small class of men come to college well prepared and able and willing to do more than the successive work of each class calls for, with a view of attaining their degree in less than four years. Under the new plan, these men are encouraged to anticipate a part of their freshman year work at once and enough of the work of later years, during subsequent summer vacations, to enable them to complete the 60 hours within three years. This class of men is necessarily small, but made up of mature and earnest students to whom it is a matter of serious importance to complete their course in less than the four years.

Heretofore the requirement as to specific courses to be taken has been the central one in the curriculum. In fact, as is well known, up to 1884 practically all the curriculum was made up of so-called "required" courses. In that year one-

third of the work of the college course was made elective, the choice being limited to a small range of subjects. The fraction has grown by the dropping of natural science in 1894, and of mental and moral science in this year, and by the changes in sophomore year made a few years ago, amounting to the introduction of a limited choice of courses. The required courses that remain under the new curriculum are, as said above, exclusively those of the freshman year, the requirement now covering only one-year courses in Greek, Latin, English, mathematics, and in either German or French.

In the Sheffield Scientific School a course in sanitary engineering and a course in studies preparatory to the study of forestry have been established.

The Yale Forest School was established during the year and has an endowment of \$150,000 given by Mr. James W. Pinchot and his family.

St. John's College, Washington, D. C.—Henceforth the classical course will be eliminated from the curriculum; modern languages will be substituted and the scientific and commercial courses will be enhanced. Our own language with its literature will receive very special attention. The aim is to make it an English science school with a good business course.

Florida Agricultural College, Lake City, Fla.—Provision has been made for a classical course of study.

St. Leo (Fla.) Military College.—Spanish has been made obligatory in the commercial course.

Seminary West of the Suwanee River, Tallahassee, Fla.—Two years of Spanish and two years of Italian introduced into the curriculum. Four years in Greek and six years in Latin required for A. B. degree. Electives in senior class. A department for teachers was inaugurated last year.

Atlanta (Ga.) University.—The former subnormal class has been dropped, leaving no regular work of grammar school type. An English high school course of three years has been added.

North Georgia Agricultural College, Dahlonega, Ga.—The entrance requirements have been made to conform to those of the College Association of Georgia.

La Grange (Ga.) Female College.—The course of study has been changed so as to conform to the course adopted by the New England Association of Colleges, to go into full effect in 1901-1902. This is by order of the board of education of the Methodist Episcopal Church South.

Mercer University, Macon, Ga.—Elective studies allowed in junior and senior years.

Emory College, Oxford, Ga.—Elective studies allowed in junior and senior years.

Ewing (Ill.) College.—The classical and scientific courses have been rearranged and strengthened. More attention will be given hereafter to political science.

Knox College, Galesburg, Ill.—The courses of study have been changed to the group system.

McKendree College, Lebanon, Ill.—The required mathematics ends with trigonometry at the close of freshman year.

Rockford (Ill.) College.—Introduction of courses in Spanish, hygiene, and domestic science. For the coming year new courses are offered in bacteriology, pedagogy, and geology.

Union Christian College, Merom, Ind.—The curriculum has been strengthened and electives added in the junior and senior years.

Henry Kendall College, Muscogee, Ind. T.—Normal and business courses have been added.

State University of Iowa, Iowa City, Iowa.—The following additions to courses are to take effect in 1900-1901: Greek art and archaeology and Sanskrit added to courses in Greek; several courses in Scandinavian languages and literature added to courses in German; lectures on journalism and bookmaking added to English; a full course in public speaking.

Graceland College, Lamoni, Iowa.—The scientific course has been displaced by a philosophical course, owing to insufficient scientific apparatus and equipment.

Tabor (Iowa) College.—A larger use of elective system.

University of Kansas, Lawrence, Kans.—A two-year medical course, including only the scientific branches, first offered.

Washburn College, Topeka, Kans.—Creation of department of philosophy, giving new courses in psychology, philosophy and logic. Drops degree and course leading to bachelor of letters.

Berea (Ky.) College.—Equipped domestic science building and employed a special teacher. Established courses in farm economy and home economy, two years each. Special teachers' normal course to fill six months of each year not occupied by public schools.

Georgetown (Ky.) College.—Added a new course, called the fine arts course, leading to the A. B. degree. In this course musical study plays an important part.

Millersburg (Ky.) Female College.—A Bible course has been added.

Centenary College, Jackson, La.—A course for the Ph. B. degree has been added.

Bates College, Lewiston, Me.—The study of French has been introduced during the freshman year and may be continued either as required work or electives throughout the course. German may be taken for three years. Chemistry has been strengthened by the addition of two courses and now has six courses. Botany has an additional course; also physics. Argumentation is represented by a course in English.

University of Maine, Orono, Me.—The classical course was established in the fall of 1899.

Colby College, Waterville, Me.—A course in books and libraries, one hour per week, one term, is given to all sophomore students.

Rock Hill College, Ellicott City, Md.—Greek was suppressed and eliminated from the course of study in sophomore and freshman classes, and the study of German was substituted in its stead.

Woman's College, Frederick, Md.—Requirements for admission raised with a view to uniformity with that of colleges generally.

Mount Holyoke College, South Hadley, Mass.—Established a department of pedagogy.

Wellesley (Mass.) College.—An enlargement of work in archaeology.

University of Michigan.—New courses established in marine engineering, in higher commercial education, and in administrative law.

Albert Lea (Minn.) College.—Established a chair of pedagogy.

Gustavus Adolphus College, St. Peter, Minn.—Established a literary course with degree of B. Lit., and raised the standard of admission into the academy course to be in full line with requirements for entrance into high schools.

East Mississippi Female College, Meridian, Miss.—The course of study has been raised one year, so as to correspond with that of the Association of Southern Colleges.

University of Mississippi.—Introduction of courses in electrical and civil engineering and provision for their instruction.

Central Christian College, Albany, Mo.—An English Bible course is provided for. The commercial course is extended to two years, making it a means of more thorough preparation for business life.

Central College, Fayette, Mo.—A large part of the work in Latin, Greek, and English, formerly classed as freshman, was put back into the academy and the courses broadened by putting in more electives. The German course was lengthened one year.

Missouri Valley College, Marshall, Mo.—Beginning May 31, 1900, this college follows the continuous sessions plan, dividing the year into four terms of twelve

weeks each, the summer term offering advantages to public-school teachers and irregular students.

Christian Brothers College, St. Louis, Mo.—French, German, and Spanish, six years' course, will be substituted in the future for Greek and Latin.

Drury College, Springfield, Mo.—Reduced requirements in mathematics in classical course, so that only trigonometry following advanced algebra and solid geometry are required for graduation.

Tarkio (Mo.) College.—The scientific course is being lengthened to four years.

Montana College of Agriculture and Mechanic Arts, Bozeman, Mont.—Established a course in civil engineering.

Dartmouth College, Hanover, N. H.—Established the Amos Tuck School of Administration and Finance, a graduate school of two years' course.

Newark (N. J.) Technical School.—A course in theoretical and applied electricity was opened at the beginning of the school year 1899-1900.

St. Stephen's College, Annandale, N. Y.—Abolished a three years' special course. Do away with preparatory course when those now taking it go into college. Extended the course in chemistry by 100 per cent, and require adequate laboratory work. Extended courses in philosophy. Established a four years' course in oratory.

Adelphi College, Brooklyn, N. Y.—Added a normal art course for students who wish to become teachers of drawing, and a school of musical art.

St. John's College, Brooklyn, N. Y.—Raised the requirements for admission to the preparatory department and added one year to the Greek course in that department.

Clarkson School of Technology, Potsdam, N. Y.—Established a civil engineering course.

Wake Forest (N. C.) College.—Laboratory work now required in physics. More English required for graduation.

Kenyon College, Gambier, Ohio.—A new course of study has been added in the collegiate department leading to the degree of bachelor of letters. The languages required for admission are three years of German and one year of Latin. The work emphasizes modern languages, English literature, and history.

Western College, Oxford, Ohio.—The literary course of three years leading to the English diploma has been dropped.

Lake Erie College, Painesville, Ohio.—New courses in Italian, history of music, and Anglo-Saxon.

Heidelberg University, Tiffin, Ohio.—Changed from group system during junior and senior years to an average of eight hours of elective work per week. The work of the lower classes is entirely required.

Beaver (Pa.) College.—Course of study changed from seminary to full college course.

Bryn Mawr (Pa.) College.—Solid geometry and trigonometry have been withdrawn from the subjects required for the A. B. degree. A graduate course in German literature is given for the first time. A course in law (law of contract) is given for the first time. A graduate course in constitutional law has been arranged. A department of applied mathematics has been organized, giving both graduate and undergraduate courses. Graduate work in archæology has been organized and added to the subjects which may be offered for the Ph. D. degree. Practice courses in connection with the graduate work in education have been organized.

Franklin and Marshall College, Lancaster, Pa.—The course of study was changed at the beginning of the year so as to make Greek elective or allow students to begin Greek in the freshman year. The list of electives was also enlarged. Students who take Greek receive the degree of A. B.; others receive Ph. B.

Lehigh University, South Bethlehem, Pa.—Added a course in marine engineering. *Swarthmore (Pa.) College.*—New courses offered in English, history, economics, and Biblical literature.

Waynesburg (Pa.) College.—Added a number of electives in junior and senior years.

Erskine College, Due West, S. C.—The doors of the literary and scientific departments will hereafter be open to women.

Converse College, Spartanburg, S. C.—Abolished the preparatory department.

University of South Dakota, Vermilion, S. Dak.—The B. L. degree has been dropped and the Ph. B. degree has been substituted.

Grant University, Athens, Tenn.—The standard of requirement in English has been raised as established by the joint conference of colleges and secondary schools.

Knoxville College, Knoxville, Tenn.—One year added to the normal course, making it equal to the preparatory course.

University of Tennessee, Knoxville, Tenn.—The regular course in agricultural science was rearranged and strengthened and the short course in agriculture of six weeks established, designed especially for farmers.

Milligan (Tenn.) College.—The tendency is toward fewer studies and longer time on a study, leaving chemistry, electricity, and more elaborate physical science to State schools and universities, and to make our own a fuller English, classical, political or economical, and philosophical course.

Fisk University, Nashville, Tenn.—One year has been added to the normal course.

Greenville and Tusculum (Tenn.) College.—More liberty for elective work in junior and senior years.

Trinity University, Tehuacana, Tex.—All students required to take courses in English Bible to be credited on work for A. B., B. S., or B. L. degrees.

Hampden-Sidney (Va.) College.—Added courses in physics and chemistry and doubled instruction in logic, history of philosophy, geology, German, and French.

Randolph-Macon Woman's College, Lynchburg, Va.—Students granted three hours of free electives in junior and five in senior year; other electives are by groups.

University of Washington, Seattle, Wash.—Added a school of pharmacy.

Gonzaga College, Spokane, Wash.—A commercial course of three years was added. A complete course of philosophy and theology established for divinity students.

Whitman College, Walla Walla, Wash.—A development of scientific work through increased facilities afforded by new building and equipment.

University of Wisconsin, Madison, Wis.—Established a school of commerce.

HIGHER COMMERCIAL EDUCATION.

The movement for the establishment of courses or departments of instruction in commerce in connection with the higher institutions of learning in this country, a description of which was published in the Report of the Commissioner of Education for 1897-98, page 2441 et seq., has continued during the past few years. In addition to the institutions mentioned in that report, courses in commerce have been established in New York University, New York City; Louisiana State University, Baton Rouge, La.; Dartmouth College, Hanover, N. H.; University of Vermont, Burlington, Vt.; University of Wisconsin, Madison, Wis.; Ohio State University, Columbus, Ohio; University of Michigan, Ann Arbor, Mich.

The purpose or aim of the courses in commerce is to prepare men for the modern forms of business and for the consular, diplomatic, or other service in which a knowledge of business is essential to a successful career. These courses in nearly all of the above mentioned institutions were established in 1900, and are therefore in the first year of their existence. This line of work being entirely new to the

institutions, the courses of instruction as outlined must be regarded as merely tentative, to be changed and enlarged as experience and the needs of students shall suggest. In order to show the nature of the work offered, the courses of instruction in commerce, so far as outlined by several of the institutions, are given in the following pages:

Louisiana State University.

The degree of B. S. is granted on the completion of the above course.

AMOS TUCK SCHOOL OF ADMINISTRATION AND FINANCE OF DARTMOUTH COLLEGE,
HANOVER, N. H.

This school was established in 1900 on an endowment of \$300,000 given to Dartmouth College by Mr. Edward Tuck, a graduate of the college in the class of 1862. Candidates for admission who wish to obtain the certificate of the school must present a bachelor's degree or must have completed three years of an undergraduate course, including certain work in history, economics, political science, sociology, English composition and argumentation, and elementary courses in two of the three languages, German, French, and Spanish.

The aim of the school, as stated in the catalogue for 1900-1901, is to give:

First. A body of knowledge and principles applicable to any form of business organization and management—the training which is needed by the business man as such.

Second. A more special preparation for banking, insurance, and railroad service, as well as for domestic and foreign commerce, the diplomatic service, and public administration.

Third. Such further teaching and training as will prepare men for journalism or for participation in civic affairs.

The courses appropriate to the three interests are identical for the first year, and are as follows:

Modern history.—European political history, 1789-1878; United States political history, 1783-1877.

Economics.—American industrial development: Especial attention given to the period since the civil war, and a careful study made of modern industrial organization, including the development of the great manufacturing industries, the growth of corporations, trusts, and monopolies; the history and problem of transportation; stock and produce exchanges; relations of capital and labor, and the effect of modern methods of business on producer and consumer. History and theory of money; development of economic theory.

Political science.—American constitutional law.

Sociology.—Anthropological geography; social statistics and applied sociology.

Language.—Advanced study in two of the three languages, German, French, and Spanish.

English composition and speaking.—Business forms and commercial correspondence; discussion of current questions.

In the second year of the course the studies are assigned to students according to the career which they intend to adopt, and are selected from the following:

MODERN HISTORY AND DIPLOMACY.

3. *Modern history.*—Lectures on the political history of Canada, Mexico, and the South American States, Asia and Africa, with special emphasis on recent developments and particular reference to the phases of their history which might bear on their relations with this country. Under the direction of the instructor the students will do constructive work in the political history of Europe since 1878, each student covering a given period, and profiting from the results of the work of other students.

4. *Diplomacy.*—Origin and evolution of modern diplomacy; qualifications and methods of typical modern diplomats; the course of certain specially noteworthy negotiations from the Congress of Vienna to the Venezuela case, including the evolution and history of the Monroe doctrine, the organization of American and foreign diplomatic and consular services, principles of diplomatic procedure, the duties laid down by the United States Government for its agents in foreign countries. Constructive work in the history of Europe since 1878 will be done by the students.

BUSINESS ORGANIZATION AND MANAGEMENT.

1. *Corporation finance.*—Forms of investment securities, methods of corporation "financiering," consolidation, bankruptcy, receivership, reorganization, general principles of investment. See also course 1 (c) under "Transportation."

2. *Money markets and speculation.*—Movements of money and rates of domestic exchange. New York as a financial center and the influences affecting interest rates. Note and bill brokers. Foreign exchange movements, including a study of the English money market. Panics, signs of their approach and the methods of meeting them. Detailed study of stock and produce exchanges, including a comparison of the exchanges of England and the continental countries.

3. *Industrial resources and industrial organization.*—Detailed study of the important raw products of the United States from the standpoint of costs, markets, and transportation facilities. Consideration of the more important manufacturing industries of the country, especially iron and steel. A study of the methods of business organization devised for the conduct of these industries. See also course 1 (a) under "Transportation," and course 1 (b) under "Finance" for typical instances of the organization of great undertakings.

4. *Accounting and auditing.*—General principles of accounting; nature of the balance sheet and determination of what constitutes a profit. Accounting methods of corporations. General principles of auditing. Theory of depreciation or the writing off of diminishing value. Going concerns *vs.* those that have ceased operations. Economic value of location. See also course 1 under "Accounting."

5. *Investments.*—A series of lectures by an experienced financier on the practical handling of investments.

FINANCE.

1. *Banking*.—(a) *Law*: Detailed study of the bank laws of the United States and of typical States and of generally accepted banking practice. (b) *Organization*: The organization of a bank for business, with the duties and liabilities of its officers and employees. Comparative study of national, State, private, and savings banks, and loan and trust companies: clearing houses, their functions and administration. (c) *Operation*: Practical methods of operation. Forms of credit transactions, note issues, domestic exchange. Comparative study of English and continental banks.

2. *Public finance*.—Methods of public administration. Public expenditure and revenue. Relation of the Treasury Department to the money market in the issuance of bonds and the placing of deposits. National, State, and municipal debt and taxation. Typical States and municipalities will be carefully studied.

TRANSPORTATION.

1. *Railroad service*.—(a) *Organization*: The organization of a railroad for business, with a discussion of the duties of officers and employees. (b) *Operation*: Practical methods of operation, including a careful study of the regulations governing all forms of railroad service. A study of the traffic department, including systems of car accounting. Theories of rates and methods of forming classifications and rate schedules. Fast freight lines, joint rates, and various forms of railroad associations. (c) *Accounting and auditing*: See courses 1 and 2 under "Accounting" and course 4 under "Business organization and management." (d) *Mechanics*: Study of the elements of railroad construction and maintenance and their costs. Details of locomotives and cars, their use, construction, and repair. Modern mechanical and safety devices, including brakes, couplers, signaling systems, and the like. Purchasing department, with consideration of properties of materials and railroad supplies. See also course 3 under "Business organization and management" for railroad materials produced by iron and steel industries. (e) *Management*: Competition, discrimination, pooling, combination, consolidation, State ownership or control. See also course 1 under "Business organization and management."

2. *Water transportation (inland)*.—(a) *Lakes and rivers*: The service as a competitor of railroads. The development of lake traffic, with a study of modern facilities. The deep waterways projects. Decline of river commerce. (b) *Canals*: Their economic value and the extent of their use.

3. *Foreign trade*.—(a) *Economic geography*: A survey of the present economic condition of the different parts of the world, their products, resources, and routes of trade, and the influence of physical and social causes in determining that condition. Economic phases of colonial development. (b) *Foreign exchange*: Theory of foreign exchange and the causes that determine rates. Methods of international payment, movements of capital, monetary standards of foreign countries as they influence international settlements. (c) *Foreign commerce of the United States*: Development of ocean shipping. Export and import trade of the United States and its competitive relation to other countries. Tariff conditions of the various countries and other forms of commercial interference. Commercial conventions and treaties. See also course 3 under "Business organization and management" and course 2 under "Statistics."

4. *Legal conditions of international trade*.—A series of lectures which aim to present the practical legal aspects of international dealing.

ACCOUNTING.

1. *Principles of accounting*.—A series of lectures on the principles of railroad and industrial accounting as applied to financial and operating administration. Methods of corporation bookkeeping and forms of financial organization and management briefly considered.

2. *Theory and practice of railroad statistics*.—(a) Revenue and expenses; why railroads are operated, how organized and administered, and the relation of accounting, auditing, and statistics to operation: general plan and technique of railroad accounting. (b) Revenue accounting, freight and ticket; how the money is collected and covered into the treasury; the safeguards provided. (c) Disbursement accounting, stages and methods of authorization; checks provided; significance of the different certifications; possibilities of fraud. (d) Stores and car accounting, various systems; watching balances; use of the car record in car distribution, car mileage, clearing houses, the home record, the foreign record, the interchange record. (e) Statistics of operation, revenue disbursement, motive

power, transportation, and maintenance of way; use of statistics in handling a property. (f) General books, ledger, side ledgers, journal, journal entries, accounts current, general balance sheet, organization and methods of the accounting office, the division and general office, the shops, the storehouse, the station agency.

INSURANCE.

A series of lectures designed to illustrate the practical workings of insurance as conducted to-day in all its important forms, with special reference to the United States. After a brief discussion of the economic conception of insurance, its history, development, problems, and social service, attention will be given to fire and casualty insurance, to employers' liability and corporate suretyship, but special study will be devoted to its most highly developed form in life insurance. This will involve consideration of fundamental assumptions, rate making, policy construction, varied benefits, field management, advertisements, compensation, solicitation, medical selection, practical accounting, investments, office work, corporate management, State supervision, insurance law, insurance by the State. A critical estimate will be presented of the leading theories and different practices related to these questions, the object being to give a just estimate of the business and a comprehensive knowledge of its present-day workings.

STATISTICS.

1. *History, theory, and technique of statistics.*—A course in statistical methods and results, with practical work in investigation and tabulation. An attempt to determine the laws that govern group actions of men. Sources and reliability of statistical data. The methods of distinguishing true and false inferences.

2. *Studies in American statistics.*—Critical study of the contributions of statistics to our knowledge of production, banking, coinage, prices, wages, and particularly domestic and foreign commerce.

LAW AND POLITICAL SCIENCE.

5. *Commercial law.*—An outline of the law of real property, including deeds, mortgages, and wills; of the law of contracts (Anson on Contracts); of negotiable instruments (Bigelow on Bills, Notes, and Cheques); of personal property, including sales and bailments; of agency, carriers, insurance, and trustees.

6. *Industrial and commercial corporations.*—A course of lectures treating of legal persons, natural and artificial; causes of the increase of artificial persons (corporations) since 1763 and the consequent development of corporation law; distinction between partnerships and corporations; modes of forming corporations; inviolability of charters; powers of corporations and their officers and agents; fiduciary relations of their officers and agents; rights of stockholders; relation of stockholders to each other; issue of stock and rights of creditors; industrial trusts.

7. *International law.*—This course is historical and explanatory of present international relations. It treats of the origin and development of the rules that generally govern the intercourse of modern civilized States, and specified topics of present interest, such as the effects of annexation upon international obligations, recent cases of intervention, the Hague Conference, contraband of war, and continuous voyages.

8. *Politics and administration.*—A study of American political parties since 1873; their organization and increasingly centralized control; their policies, and methods chosen for executing them; existing electoral machinery, its practical working and defects; some proposed remedies.

ADMINISTRATION.

1. *Municipal administration.*—A series of lectures in which the development of municipal policy will be traced with regard both to the forms and the aims of municipal government. The town meetings, the town council, the city system, and metropolitan administration will be considered in their constitutional bearings and in their practical operation. A comparison of typical city charters, American and foreign, will be made. The proper sphere of the municipality will be considered, first, in its traditional function as protector of person and property; secondly, in the extension of its functions to include the control of public utilities, the education of the electorate, and the care of the dependent classes. The lecturer will discuss the causes of municipal corruption, especially as found in economic conditions, and will trace the relation between municipal reform and social reform in general.

2. *Public administration*.—See course 4 under “Modern history and diplomacy,” course 2 under “Finance,” and course 8 under “Law and political science.”

DEMOGRAPHY AND SOCIAL INSTITUTIONS.

5. *Demography*.—This is a study of population or the units of all forms of social life. It involves a consideration of the economic value of various nations and peoples as producers and consumers of commodities. This is followed by an investigation of the social groups or classes into which population tends to fall, both those involved in the social division of labor and those which have a more natural basis.

6. *Psychology of men in association*.—Social phenomena are here viewed from the subjective side and interpreted as modifications of the individual mind due to contact. Human institutions are treated as an expression of the spiritual life of men. Public opinion is analyzed and an attempt is made to interpret sympathetically trade unionism, mass and class feeling, and all important group aspirations and rivalries. Social problems raised by racial contact are taken up, and the adaptation of political and social life to the peculiar psychic condition of each people. This is the study of the social environment, as expressing the mind of the individual and in turn modifying it.

LANGUAGE.

The work in language will be a continuation of that of the first year. Students will be expected to pursue throughout the year the study of one of the three modern languages, German, French, and Spanish.

THESIS.

A thesis may be required embodying original research and representing work in the field of study which the student has been especially pursuing.

The subjects of the second year have been assigned or classified as furnishing technical training for careers in general mercantile and commercial business, banking, railroad service, foreign trade, insurance, administration, journalism, and civic affairs.

SCHOOL OF COMMERCE, ACCOUNTS, AND FINANCE OF NEW YORK UNIVERSITY.

The course of study extends over a period of two years. The following outline of the subjects embraced in the curriculum is announced, subject to changes:

A. ACCOUNTING.

1. *Theory of accounts*.—Principles of accounting; purpose of accounts; single and double entry; the different books of accounts.

2. *Practice in accounting*.—Description and illustration of accounts of individuals; accounts of partners; accounts of corporations—commercial, financial, manufacturing, transportation, etc.; municipal accounts; Federal accounts; receivership; trusteeship; executorship; liquidation, etc.; statement of affairs.

3. *Auditing*.—Methods of procedure in examination of accounts of individuals, partners, corporations, municipalities, etc.; verification of balance sheets and statements of profit and loss; special reports.

B. COMMERCE.

1. *Foreign commercial relations*.—Trade policies of foreign governments to one another and to colonial dependencies; foreign commerce of United States; theory of international trade; economic aspects of colonial development; foreign trade of America as affected by recent acquisitions of territory; consular service and regulations as affecting commerce.

2. *Domestic commerce and transportation*.—History of transportation and of railway policies; economic and social bearings of present transportation problems; railway construction—speculative management—stocks and bonds; railway failures, receiverships, reorganizations, negotiations, profits; theories of rates, classification, discrimination, competition, combination railway; employers' liabilities,

labor relief, insurance, State ownership and management; comparative study of interests of inventors, of employees, of public, of State.

C. FINANCE.

1. *Money*.—History of money; nature and functions; theories of money supply; stability of prices; commercial prosperity; debtors' and creditors' standard of deferred payments; Government paper money; bimetallism; monetary legislation of United States.

2. *Banking and credit*.—History and theory of banking and credit operations; banking systems of principal foreign States; proposed methods of banking reform in United States; instruments of credit; classes of securities; stock and produce exchanges; current legislation upon banking.

3. *Public finance*.—Revenues and expenditures of the various political units in America (local, State, national); chief features of public financial administration; history of financial development (Federal, State, and municipal); recent problems of State taxation.

D. LAW.

1. Contracts: 2 hours weekly.
2. Sales: 1 hour weekly.
3. Agency: 1 hour weekly.
4. Partnership: 2 hours weekly.
5. Bills and notes: 2 hours weekly.

CENTRAL HIGH SCHOOL, PHILADELPHIA, PA.

The department of commerce was inaugurated in September, 1898. It has a four years' course of study, as follows:

FRESHMAN YEAR.

English.—Composition writing with a study of classical literature in translation, and of American literature. 4 hours.

Latin.—Elements of Latin and easy readings, 4 hours.

Mathematics.—Algebra, 5 hours.

History.—Greek and Roman history and European history to 800 A. D., 3 hours.

Science.—Raw materials of commerce (animal, vegetable, and mineral products), 4 hours.

Economics.—Philadelphia history, government, and business interests (lectures and quizzes), 2 hours.

Business technique.—Business forms, with penmanship. Practice, 2 hours.

SOPHOMORE YEAR.

English.—History of English literature, with composition writing, 3 hours.
German.—Grammar, reading, and conversation, 5 hours.
Mathematics.—Advanced commercial arithmetic, including mensuration and the metric system, 2 hours. Elements of geometry and trigonometry, 3 hours.
History.—English and modern European history, 3 hours.
Science and economics.—Commercial geography, 2 hours. Trade centers of the world—lectures in connection with the course on commercial geography, 1 hour.
Business technique.—Bookkeeping, 3 hours. Stenography, 2 hours. Typewriting (optional).

JUNIOR YEAR.

English.—Readings from English literature with essay writing, 2 hours.
German.—Reading, composition, and conversation, 3 hours.
Romance languages.—Spanish or French, 4 hours.
History.—American history, 2 hours.
Science.—Physics and chemistry, 4 hours.
Economics.—Political economy, 2 hours.
Business technique.—Mechanical drawing, 2 hours. Observation of and report on office practice, business methods, etc., 3 hours. Stenography, 2 hours. Typewriting (optional).

SENIOR YEAR.

English.—Readings from literature and thesis writing, 3 hours.
German.—Advanced reading, conversation, and correspondence, 3 hours.
Romance languages.—Spanish or French, 3 hours.
History.—Modern industrial and commercial history (of the United States and England), 3 hours.
Science.—Industrial chemistry, 2 hours.
Economics and political science.—Transportation, banking, and finance, 4 hours. Statistics (in connection with thesis writing), 1 hour. Study of government (chiefly of cities), 3 hours.
Business technique.—Ethics of business and commercial law, 2 hours.

SCHOOL OF COMMERCE OF THE UNIVERSITY OF WISCONSIN.

This school was established in 1900 for the purpose of supplying facilities for the training of young men who desire to enter business careers, especially in such fields as domestic and foreign commerce and banking, or branches of the public service, like the consular, in which a knowledge of business is essential. The course of study extends through four years, and is as follows: (The figures indicate number of hours per week.)

FRESHMAN YEAR.

First semester.—Economic geography, 4, or American history, 4;¹ German, French, or Spanish, 4; English, 3; trigonometry, 2; chemistry, 3; drill and gymnastics, 2.

Second semester.—Economic geography, 4, or American history, 4; economic history of England, 2; language continued, 4; English, 3; chemistry, 3; drill and gymnastics, 2.

SOPHOMORE YEAR.

First semester.—History of commerce, 2; mediæval history, 3; business methods and accounts, 2; language continued, 2; English, 2; physics, 5; drill and gymnastics, 2.

Second semester.—Business organization and management, 2; elementary economics, 3; modern history, 3; language continued, 2; physics, 5; elective, 2; drill and gymnastics, 2.

JUNIOR YEAR.

First semester.—Money and banking, 3; transportation, 2; generation and transmission of power, 3; language continued, 2; technical elective, 3; free electives, 5.

¹ Students who take economic geography the first semester will take American history the second, and vice versa.

Second semester.—Commercial law, 3; transportation, 2; nineteenth century history, 3; language continued, 2; technical elective, 3; free electives, 5.

SENIOR YEAR.

First semester.—Commercial law, 2; materials of commerce, 3; language continued, 2; thesis, 2; technical elective, 3; free electives, 6.

Second semester.—Commercial law, 2; materials of commerce, 3; language continued, 2; thesis, 2; technical elective, 3; free electives, 6.

TECHNICAL ELECTIVES.

The technical electives have been arranged in two groups, one of which must be elected by each student. The group preparatory to the business of banking consists of the following courses: (a) Elements of money and banking; (b) history of the currencies of the chief modern nations; (c) corporation finance and securities; (d) commercial crises with especial reference to their influence upon the banking business.

The consular group consists of the following courses: (a) International law; (b) commercial geography of Europe; (c) history of diplomacy; (d) history and characteristic features of the consular services of the chief foreign countries; (e) consular service of the United States.

OUTLINE OF COURSES IN ECONOMIC HISTORY, GEOGRAPHY, AND COMMERCE.

Economic history of England.—Begins with a study of the economic life of England as depicted in the doomsday survey, and, with this as a basis, traces the most important changes in the agricultural, manufacturing, and commercial life of the country from that time to the present. Scott's Syllabus of Lectures, and Gibbon's *Industry in England*. Repeated each semester. Lectures twice a week; quiz once a week.

The history of commerce: (a) The development of the world's commerce from ancient times to the Napoleonic era.—Special attention is given to the materials and the machinery of commerce, to trade routes, and to the relations between commercial development and other branches of the history of civilization. Lectures and assigned readings, first semester, twice a week.

(b) *Commercial policies.*—Study of commercial treaties and tariff history since the Napoleonic era. A sketch of the histories of the commercial policies pursued by the chief modern nations previous to the present century will be given by way of introduction. Lectures, assigned readings, and topics, second semester, three times a week.

Currency history.—Systematic presentation of the currency history of England, France, Germany, and the United States. Second semester, three times a week.

Commercial geography—(a) Introductory course.—A study of the technique of productive industry. Topical reports and lectures. Repeated each semester, four times a week.

(b) *Extractive industries of the United States.*—A study of the natural and social resources of the United States and of the chief extractive industries for the purposes of determining their location, condition, and relations to each other. Lectures and required readings. First semester, three times a week.

(c) *Manufacturing industries of the United States.*—The evolution, present location, and condition of the chief manufacturing industries, their relations to one another, to the extractive industries, to transportation, credit, and market agencies, and foreign trade. Lectures and required readings. Second semester, three times a week.

(d) *Commercial geography of Europe.*—Natural resources and industries of the chief European countries, with special emphasis on their location, their present state of development, and their relations to the commercial interests of the United States. Second semester, twice a week.

Business forms and accounts.—Various methods of accounting and auditing actually employed by and suitable to great corporations. Also a study of business forms, such as invoices, sales, accounts, custom-house documents, ships' reports and papers, bills of lading, warehouse receipts, charters, insurance policies, etc. First semester, twice a week.

Transportation—(a) Railroad transportation.—History of its development in the chief modern nations, with a discussion of its economic and legal aspects. Lectures and assigned readings. First semester, twice a week.

(b) *Water transportation*.—Brief historical survey of the growth of inland and ocean navigation, followed by a description of the leading water routes of the world and the industrial forces and geographical and political conditions determining them. Lectures and assigned readings. Second semester, twice a week.

Materials of commerce—(a) *Vegetable*.—Throughout the year two lectures per week and two hours per week of laboratory work.

(b) *Chemical*.—One lecture per week and two laboratory periods.

Economic crises.—Organization of the market, causes and characteristics of economic crises from the point of view of the business manager and the banker, history of crises, concrete study of the more important crises. First semester, 3 hours a week.

Corporation finance and securities.—Methods of financing employed in great corporations, with especial reference to the various sorts of negotiable securities which they issue and the circumstances which affect their value. A technical study of stock and produce exchanges and of their relations to the business of banking. Lectures and assigned reading. Second semester, twice a week.

Business organization and management.—Lectures, assigned readings, and topical reports. Second semester, twice a week.

Consular service—(a) *Foreign consular service*.—Brief outline of the growth of foreign relations, history of the consular services of the chief countries of the world, methods and work of the consular officers of the chief foreign countries. First semester, three times a week.

(b) *Consular service of the United States*.—Detailed study of the work and duties of the consular officers of the United States, combined with practical work in the investigation of existing industrial conditions and the making of such reports as are required of consuls. Second semester, three times a week.

South American and West Indian commerce.—Courses of lectures by specialists on commercial geography of the chief South American States, their systems of banking, exchange, currency, credits, transportation, tariff commercial law, etc.

1898-99	1,196	74	163	327	114	1,874
1899-1900	1,233	75	166	333	106	1,913

STATISTICAL REVIEW.

Students.—The total number of undergraduate and resident graduate students in universities and colleges for men and for both sexes, colleges for women, Division A, and in schools of technology for the year 1899-1900 is reported as 98,923, an increase of 6,538 students over the number for the preceding year. The number of such students for each year from 1889-90 to 1899-1900 is as follows:

Number of undergraduate and resident graduate students in universities, colleges, and schools of technology, from 1889-90 to 1899-1900.

Year.	Universities and colleges for men and for both sexes.		Colleges for women, Division A.	Schools of technology.		Total number.	
	Men.	Women.	Women.	Men.	Women.	Men.	Women.
1889-90	33,056	8,075	1,979	6,870	707	44,956	19,761
1890-91	40,089	9,439	2,205	6,131	481	46,220	12,185
1891-92	45,032	10,380	2,633	6,131	481	51,163	13,537
1892-93	45,639	11,489	3,198	8,616	843	55,305	15,590
1893-94	50,297	13,144	3,578	9,517	1,375	59,814	18,038
1894-95	52,586	14,298	3,667	9,467	1,106	62,653	19,071
1895-96	56,556	16,746	3,910	8,587	1,065	65,143	21,721
1896-97	55,755	16,533	3,913	8,907	1,694	64,662	21,543
1897-98	58,407	17,765	4,416	8,611	1,239	67,018	23,470
1898-99	58,467	18,948	4,593	9,068	1,339	67,505	24,880
1899-1900	61,812	20,452	4,872	10,347	1,440	72,159	26,764
Increase (per cent.)	62.4	153.3	146.2	50.6	103.7	60.6	148.7

These figures show that while the men students have increased during the period 60.6 per cent, the women students have increased 148.7 per cent. The number of undergraduate students pursuing various courses, so far as reported, is as follows:

Classical courses	37,658
Other general culture courses	19,391
General science courses	10,925
Agriculture	2,352
Mechanical engineering	4,459
Civil engineering	3,140
Electrical engineering	2,555
Mining engineering	1,261
Architecture	459
Pedagogy	9,524
Business	7,953

The number of students receiving instruction in military drill was 18,535.

Degrees.—The number of degrees conferred during the year was as follows:

Degrees conferred for work done.

Total.....	322	20	23

Property.—The total value of property possessed by institutions for higher education, including all colleges for women, amounts to \$360,594,595, a gain of \$17,706,234 over the amount for the preceding year. The endowment funds amount to \$166,193,529, and the remainder represents the value of grounds, buildings, apparatus, machinery, libraries, etc., used for instruction and research.

Income.—The total income for the year, excluding benefactions, amounted to \$28,558,463, derived from the following sources:

Tuition and other fees.....	\$11,171,127
Endowment funds.....	7,045,479
State and municipal appropriations.....	4,464,405
United States Government.....	2,984,177
From other sources.....	2,893,275

These figures show that students pay about 39.1 per cent of the cost of their college education.

Benefactions.—The value of gifts and bequests reported as having been received by the institutions for higher education during the year amounts to \$11,995,463. The amounts reported by the institutions of the several geographical divisions of the country are as follows:

North Atlantic Division.....	\$6,246,676
South Atlantic Division.....	642,002
South Central Division.....	587,128
North Central Division.....	3,956,355
Western Division.....	563,302

The institutions that received benefactions during the year amounting to \$100,000 or over are as follows:

Colorado College, Colorado Springs.....	\$203,000
Wesleyan University, Middletown, Conn.....	100,000
Yale University.....	641,224
University of Chicago.....	1,563,695
Monmouth (Ill.) College.....	100,000
Drake University, Des Moines, Iowa.....	115,000
Berea (Ky.) College.....	112,720
Massachusetts Institute of Technology.....	462,978
Harvard University.....	835,102
Tufts College (Mass.).....	110,000
Alma (Mich.) College.....	180,000
Washington University, St. Louis, Mo.....	193,600
Dartmouth College, Hanover, N. H.....	350,000
Princeton University.....	235,753
Cornell University.....	139,350
Columbia University.....	973,915
New York University.....	352,363
University of Cincinnati.....	115,000
Ohio Wesleyan University.....	105,015
Oberlin (Ohio) College.....	159,000
University of Pennsylvania.....	530,654
Brown University, Providence, R. I.....	151,815
Converse College, Spartanburg, S. C.....	103,000
Vanderbilt University, Nashville, Tenn.....	150,000
Whitworth College, Tacoma, Wash.....	100,000

a Including tuition.

b The real estate, libraries, museums, and securities have not been appraised within recent years. A reappraisal would add very largely to the estimated value, and such reappraisal will be made in the near future. [Provost Harrison.]

CHAPTER XXXVI.

PROFESSIONAL SCHOOLS.

The number of medical schools in 1900 was the same as the year before, 151; but the number of students was 25,213, an increase of 1,435, one-fifth of whom graduated, 5,219. Omitting three or four preparatory schools, all of the medical schools except 3 now require attendance during four years before graduation, and 39 schools have annual sessions of eight or nine months.

In the 96 law schools there were 12,516 students, an increase of 642. In 47 schools of law there are courses of three years, and practically all of the schools have annual sessions of eight or nine months.

The number of theological students decreased slightly, to 8,009, while dental students increased to 7,928, and students in pharmacy to 4,042. By comparison of the summaries, it will be seen that there are about twice as many students in medicine as in law, and three times as many as in theology or dentistry, and six times as many as in pharmacy. It is also noticeable that the percentage of students graduating in medicine is smaller than in any of the other classes.

In regard to the value of grounds and buildings, so far as reported to this Office, there is no great difference between theological and medical schools, the former having about fourteen millions and the latter twelve and one-half millions, while law schools have about one and one-half millions. But as regards endowments there is a marked difference, theological having about twenty millions, medical over two millions, and law schools only about half a million. It is true that some schools did not report as to this item, but when distributed in the different classes the proportion would probably remain unchanged. When the heavy expenses necessarily connected with laboratory and clinical instruction are considered, the endowment of medical schools here given dwindles into very inadequate proportions.

THE ENDOWMENT OF PROFESSIONAL SCHOOLS.

The Boston Medical and Surgical Journal, October 25, 1900, quotes the following from a recent article by Rev. James H. Ross, of Cambridge, Mass., relative to the question of the endowment of professional schools:

The question of the medical school and the law school receiving only those who have given themselves the advantage of a liberal education is a question of profound significance to American life. It is also, in particular, a question of gravity for every member of the professional faculty and for every member of the board of trust which manages a school of law or a school of medicine. For if the student is to give so large a share of his life's time to the preparation for his life's service, if he come up to the law school or to the school of medicine with powers well trained, with the capacity of appreciation large, with his character matured, he has a right to demand of the professional school that it shall give to him advantages adequate to the ripeness, richness, and maturity of his character. It is simply absurd for a medical school or a law school, such as can be found in many of our States, to demand that candidates for admission shall have a college training; for the schools can not offer adequate opportunities to men of these advanced attainments. For medical schools such as can be found in many of the great cities of this country to ask that students who are admitted shall be liberally educated, is quite as absurd as for a high school in New York or Boston to require that candidates for its junior class shall have already taken a college course. The medical

college which demands a liberal education from candidates for admission should offer as good teaching in the fundamental branches of anatomy, physiology, bacteriology, chemistry, histology, materia medica, therapeutics, and in special branches, as these candidates themselves have received in Latin, mathematics, philosophy, German, and history in the undergraduate colleges. These schools, furthermore, should offer the student a fitting scholastic environment. The medical colleges should offer to him hospitals and clinics having many cases and unique, and the law school should put into his hands a properly equipped library.

For schools of medicine and of law to offer the student such opportunities requires, primarily, money—and money, too, in large amounts. Professional education in this country has not yet received, with the exception of theological education, a fitting endowment. The theological schools of this country are now possessed of about \$20,000,000 of endowment, and the value of their buildings and grounds is about \$12,000,000. Be it said, also, that one-half of this amount is found vested in the theological seminaries of the North Atlantic States. Of the seminaries of the various churches the Presbyterian are the best endowed. About one-fifth of the entire amount of endowment funds of churches in America are found belonging to the Presbyterian Church. This endowment allows each professorship in these seminaries to have about \$10,000 in case there were an equal division of these funds. In the Congregational and Episcopal churches the endowment would be about \$35,000 for each chair. But the endowment of the medical and law schools is so slight that one hesitates to give any figures at all. In fact, the endowment is so slight that some schools of law and of medicine are unwilling to reveal their poverty. The largest endowment in this country belongs to the medical school of Johns Hopkins University; the next largest is that of Harvard Medical School, and the next largest, so far as reported, is that of Western Reserve University Medical College. In a recent year \$1,500,000 was given to endow professional education in this country, and of this sum 63 per cent was given to schools of theology, 17 per cent to schools of medicine, 14 per cent to schools of technology, and about 1 per cent to schools of law. For the improvement of professional education in medicine and law the American people must give of their wealth with a generosity akin to that with which they have poured out their millions each year to the undergraduate colleges. The great need of American life at the present time is better trained doctors and better trained lawyers. This need can be met only by the rich endowment of schools for the training of doctors and lawyers, for it is only such schools, well endowed and well equipped, that can worthily and fittingly ask men of a liberal education to become their students. The next movement in the endowment of American education should be directed toward the schools of law and the schools of medicine.

Washington University, Medical Department, St. Louis, Mo.—"Early in the year 1899 the respective faculties of the St. Louis Medical College and the Missouri Medical College took certain preliminary steps looking to the union of these two institutions. With this end in view both faculties resigned, and in due course combined to form the medical department of Washington University."

Keokuk Medical College and the College of Physicians and Surgeons, of Keokuk, Iowa, were consolidated in 1899.

Marion Sims Beaumont College of Medicine is the name of the institution formed by the consolidation of the two medical schools in St. Louis, Mo., May 1, 1901.

The State University of Iowa College of Medicine has decided to extend the course to four years of nine months each, the length of the session to be thirty-eight weeks, or thirty-six weeks exclusive of vacations.

A GIFT TO RUSH MEDICAL COLLEGE.

The Journal of the American Medical Association (November 10, 1900) says:

Friends of high standards in medicine will rejoice to learn that Dr. N. Senn has given \$50,000 to Rush Medical College for building purposes. This is not his first gift to medicine. A few years ago he gave to the Newberry Library, of Chicago, a unique and remarkable collection of medical books—that of Baum and Du Bois-Reymond. When Rush College became affiliated with the University of Chicago, he contributed \$25,000 toward wiping out the debt of the college, and only the other day a gift of \$10,000 was announced to St. Joseph's Hospital, in which Dr. Senn for years has done a large share of his private work. This makes a substantial return to the profession, in which but few acquire abundance of worldly estate. It is given only to few to further the medical weal as Dr. Senn is doing. The example is one that others will do well to follow, and it is to be hoped that this

gift of \$50,000 may mark the beginning of a series of endowments in the interest of higher education in medicine.

The foremost medical colleges in Chicago have received, up to this time, far less endowment than similar institutions of relatively the same standing in some other large cities. And large sums of money are necessary in order to build up these schools according to the high standards they have set for their work. Since its affiliation with the University of Chicago the career of Rush Medical College has been followed with great interest. By the introduction of the quarterly system and of elective methods of study it became a pioneer in revolution of the medical curriculum. Dr. Senn's gift will enable the college to meet one of the most crying needs at the present time, namely, more room and better facilities for clinical instruction.

The gradual development in various parts of the United States of medical schools with high scientific standards, adequate equipment, and proper methods is a better foretoken than anything else of a great future for medicine in this country. The history of the Johns Hopkins Medical School, of which every American may be proud, demonstrates that American soil is favorable for the growth of scientific medicine and not merely a hotbed for medical commercialism. The influences constantly going out from the medical schools of the large universities in New York, Boston, Philadelphia, Chicago, Ann Arbor, San Francisco, and elsewhere are powerful factors in the interests of higher medical standards. And there are other well-established institutions with their own hospitals—as in Philadelphia—working toward the same end. But the fact remains that the present number of medical schools in this country—156 or thereabouts—is excessive and abnormal. And what is abnormal must be subjected to active remedial measures, and not, as suggested in a recent presidential address, allowed to drag along until eventually eliminated by a kind of natural selection. One reason for the existence of poor schools is that their graduates as yet have comparatively little difficulty in obtaining the right to practice. The State examinations must be made more searching than now. And the character of the work of schools, graduation from which entitles to come up for State examination, must be accurately controlled. Heretofore such matters have been dealt with in only the most general terms.

The facilities for practical clinical instruction demand careful investigation and specification. Too few medical schools have their own hospitals. This is true of some of our most progressive institutions. A most essential part of the work of the medical school is practical instruction and training in medicine and surgery, and how can this be accomplished properly and in accord with modern pedagogic methods unless the schools have the necessary laboratory and other equipments, and also have full and absolute control of adequate hospital facilities? Large endowments are necessary for the establishment of well-equipped institutions and hospitals in which to teach and study medicine. May not such endowments be expected when it begins to be understood what the good medical school is trying to do? Gifts like Dr. Senn's, therefore, will do much to interest the public in these matters and to open its eyes to the magnitude of the work in hand.

Yale Medical School, New Haven, has received an anonymous donation of \$100,000, which is to be applied to the construction of a clinical building—a laboratory of clinical medicine and surgery.¹

*Four years in dentistry in the University of Michigan.*²—The board of regents at a meeting held May 17, 1900, authorized the dental faculty to provide a curriculum for a four years' course in dentistry in place of the present three years' course, to be inaugurated with the session beginning in 1901, and also, at the same time, to make the educational requirements for admission to the dental course a diploma from an accredited high school or other school of similar standing, or the equivalent of either in examination.

Four years in dentistry at Tufts College.—The faculty of the Tufts College Dental School, at its last meeting, passed a unanimous vote to extend the course in that school to four years, the change to apply to all students entering the school in 1902 and thereafter.³

Board of Law Examiners in Iowa.—According to an act approved April 16, 1900, "The attorney-general shall, by virtue of his office, be a member of and the chairman of the commission provided for by the chapter of the code above referred to as amended by this act, and the court shall appoint from the members of the bar

¹ Jour. A. M. A., March 9, 1901.

² Boston M. and S. Jour., March 21, 1901.

³ Announcement, 1901.

of this State at least four other persons, who, with the attorney-general, shall constitute said commission, and which shall be known as the Board of Law Examiners. Of the persons first appointed as commissioners, two shall be designated by the court to serve for one year; the remaining members shall serve for two years." Each applicant for admission to the bar must pay an examination fee of \$5 and must have "acquired a general education substantially equivalent to that involved in the completion of a high-school course of study of at least three years in extent."

Board of Law Examiners in Rhode Island.—A permanent board of State bar examiners has been appointed, consisting of five members. The full term of service for which a member of said board is appointed is five years. The term of office of one member expires each year.¹

In West Virginia "all applicants for admission to the bar are required to pass an examination before the law faculty of the State University. If they pass, a certificate of the fact is given and on that the supreme court of appeals grants a license to practice law. The system works well."

In Arkansas "the State Bar Association at its last two sessions has taken a bold stand in recommending that the requirements in the future be more exacting, and such examinations of the various applicants be given as will thoroughly test their qualifications as to knowledge of the law and moral standing."

Increased number of law students.—In regard to the increase in the number of law students Franklin M. Danaher, secretary of the New York Board of Examiners, says:²

The law schools have doubled the number of their students in five years, and the question has been asked why they are increasing so rapidly. I have studied that question very carefully and have come to the conclusion that it is due to the general raising of the standard of education among the students themselves; they know that under existing conditions a thorough education in the law can not be obtained in a law office; they also feel, at least in our State, that under the system of examinations established by the State board, it is almost impossible to qualify unless they are fully prepared, and they know that they can not get adequate preparation outside of a law school.

Seventy per cent of the applicants in the State of New York have had some law-school training. We find that the men who come from law schools are twice as well qualified nearly, as those who apply from law offices. Fourteen per cent fail who have had law-school training, while 26 per cent fail who come to the examinations from the law office solely.

FRAUDULENT DIPLOMAS.

The Commissioner of Education, in his Report for 1898-99, page 1681, called attention to the traffic in fraudulent diplomas, the chief offender being the Independent Medical College of Chicago, also known as the Metropolitan Medical College. At the time that Report went to press the officers of the institution had been placed under arrest but not brought to trial. The result, however, has since been announced by the Journal of the American Medical Association (December 22, 1900), which states that "the president of the 'diploma mill,' whose latest name was Metropolitan Medical College, was sentenced on December 15 to serve one year in the Dupage County jail and to pay a fine of \$500. Sentence on the other two defendants was deferred until the next term of court."

The Dental Cosmos, July 1900, says:

Illinois has long possessed a vicious law under which it was possible for irresponsible men to obtain charters for colleges authorized to confer degrees. This has made Chicago the headquarters for all the degree-selling colleges of the country. The matter was first publicly ventilated in the report of the committee on foreign relations of the National Association of Dental Faculties, at the annual meeting held two years ago in Omaha. This report was a scathing denunciation of the law, which it pronounced a disgrace to the State. The committee was continued by the National Association, and they were authorized to expend such sums of money as were necessary in the further prosecution of the investigation.

¹ From Report of Rhode Island Law School.

² Albany Law School circular, 1900, p. 16.

The report aroused a great deal of feeling among the educators of the State, and a meeting of representatives of the various degree-granting literary institutions was called and a committee was appointed, consisting of Presidents Harper, of Chicago University; Rogers, of Northwestern; and McClure, of Lake Forest, to memorialize the legislature, and to endeavor to place the educational affairs of Illinois on a better basis. The report of the foreign relations committee was widely circulated. It was presented before the legislature, and extracts from it were printed in circulars and in the newspapers.

The efforts of the committee failed, but the counsel of the foreign relations committee introduced another bill, which became a law, authorizing the annulling of the charters of any colleges which granted degrees improperly. The Illinois State Board of Health was already at work toward the same end, and the foreign relations committee joined forces with that body. The consequence has been that the conductors of the "Independent Medical College of Chicago," which has advertised openly in the newspapers that it would furnish diplomas for a consideration, have at last been caught and brought to book. It was found when they were arrested that they were in possession of twenty-four different charters, so that when one was annulled they could immediately operate under another.

These men are now in jail, and it is hoped that the worst of the fraudulent colleges is broken up, and that its fate will deter others. It is believed that this institution has sold in this country and in Europe more than a thousand diplomas.

The Dental Cosmos, April, 1901, under the heading, "The status of the American dental degree in Germany," says:

The Muenchener Neueste Nachrichten, of February 6, publishes an account of the arrest and trial of a dentist, Emil Gumpoldt, for advertising himself as "Amerikanischer Zahnarzt" upon the authority of a certificate of the dental examining board of the State of Illinois. He was the holder also of a diploma which, it is charged, was issued by a fraudulent diploma concern in Chicago.

The case enlisted the interest of the Hon. James H. Worman, United States consul at Munich, who has instituted active measures toward protecting the dignity and reputability of the American dental degree as conferred by legitimate American schools. We append certain correspondence relating to the matter which will clearly show the active steps which are being taken to rectify the harmful effects of the illicit diploma traffic, and to secure proper credit for the legitimate dental degree.

CONSULATE OF THE UNITED STATES OF AMERICA,
Munich, Germany, December 29, 1900.

Hon. DAVID J. HILL, etc.:

SIR: Referring most respectfully to my unnumbered dispatch of April 21, 1900, upon the subject of American dental degrees in Germany, to which I was honored with a reply by your Department under date of July 17, 1900, No. 36, I have the honor most respectfully to report at this time:

1. That I have since placed myself in relation with the organized associations of American dental graduates in southern Germany, and, in connection with the learned counsel of this consulate, have advised them how to conduct themselves in their relations with the Government and press, and in the defense of those of their members who have been or are being prosecuted for what is termed here an "unlawful" use of their honestly acquired titles of D. D. S.

2. That at the same time in all cases, whether of gentlemen holding legitimate diplomas or of persons holding illegal issues, I have been in constant communication with the Bavarian department of justice and the foreign office to protect the rights of all legitimate holders of such American degrees, correctly issued, to use and advertise their degrees, and to secure the prosecution and conviction of those illegally holding American certificates or honors.

My task has been a peculiarly difficult and delicate one, as there is, in the first place, even among educated and intelligent Germans, a misconception of the character of American universities and especially the schools of dentistry, on account of many of them being, as far as their original organization is concerned, in form at least, private concerns; and among the less informed a strong prejudice against American degrees on this account. It has, therefore, been a matter of propaganda to bring the authorities to understand that under the republican forms of government existing in the several States, where so much is necessarily left to private initiative, these institutions, although in form private enterprises, by virtue of their charters and the right of visitation and control by the State authorities, are, in fact, public institutions.

Another difficulty lies in the fact that the German universities, stimulated by the reputation and success of American dental colleges, have added dental depart-

ments to their curricula, which in theory, at least, are not inferior to the average American institutions; and, among others, the University of Munich has recently established such a department, which, in equipment and the character of its instruction, will prove inferior to no other.

The purpose of this instruction in dentistry at the German universities is to offer to Germans the opportunity of educating themselves thoroughly in that art, and to raise the estimation of German dental degrees to the American standard, so as to induce students to remain at home.

It is easy to comprehend how this jealousy of American degrees finds its expression, not only among prejudiced people, but also among holders of German dental degrees, in denunciation of American degrees and dental institutions, and also in their efforts to bring about a prohibition of their use in Germany.

I have good reason to believe that I have met these difficulties successfully and have been able to convince the authorities here of the value of legitimate American university honors and the titles of technical schools, and of the expediency of not prohibiting them; also of the sincere desire of the United States Government to do everything possible to prevent the issue of worthless diplomas and to effect the closing of institutions issuing them.

My main endeavor has been to secure such evidence as might be of service in proceedings against the institutions issuing illegitimate diplomas, and I have already obtained possession of original diplomas and certificates in two instances where they were purchased in America by Germans against whom proceedings are now pending.

In one of these cases I have had the diplomas copied by photography and typewritten copies of the certificates made. I have applied to the legal authorities to have the original diplomas and certificates in these cases delivered to me for transmission to the State Department, for use as evidence in any proceedings it may be deemed expedient to institute, and, though such a course is difficult to effect, I hope for a favorable answer.

On December 10, 1900, a very interesting case was settled in the courts of Munich against one Samuel Gumpoldt, once a "Zahn-techniker," now a full-fledged "American dentist," claiming also to be the holder of the American degree of doctor of dental surgery. He obtained the "doctorate" at one of those nonreputable dental schools of which two remain to be suppressed in Chicago. "Dr." Gumpoldt went to America some time last spring, remained a few weeks in Chicago, and came back with a certificate from the "State board of dental examiners" permitting him to practice dentistry in Illinois. The state's attorney here made the polite request that I should testify as an expert in the case in order to establish the illegality of the defendant's claim, and as a result the "doctor" was condemned for terming himself "Amerikanischer Zahnarzt" and heavily fined. The case, of course, will be appealed, but it is to be hoped that the governor of Illinois will cause an inquiry into the illegal practice prevailing in that State by issuing such certificates as in this instance, as the State board is only expected to admit to examination a candidate who has spent at least six months in a regular dental school. In this instance the "doctor" made certain claims as to studies in Rumania. * * *

Another case now in the courts is affording me the opportunity to secure by the aid of photography the needed evidence to convict of such illegal practice the other now remaining nonreputable institution in Illinois making a business of the sale of diplomas, and I shall have the honor to submit this report by an early post.

The rapidly growing tendency among the peoples of the German Empire to bar out as far as possible all foreign competition may, as I have already suggested, force the governments of the various States to a more determined warfare in behalf of the dentists educated in the schools of Germany only, against those bearing the distinctive honors of the American dental schools, thus ultimately affecting not only the good standing of American dentists abroad, but also destroying their usefulness, if not barring them altogether. It is to be hoped, therefore, that the course taken by this consulate, however great the sacrifice in labor and time, may prove both timely and judicious, maintain the integrity of our worthy schools of dentistry, and preserve them in honor abroad as well as at home.

To this end I would most respectfully ask you whether you do not deem it expedient that publicity be given through the press in America to such institutions, and in Germany to punish persons holding and advertising their diplomas, in order to deter foreigners from purchasing such titles, and thereby to destroy the market for them? I have abstained entirely from any communications whatever to the press, but believe that the widest publicity should be given the whole subject.

I have the honor, etc.,

JAMES H. WORMAN, *United States Consul.*

*A new dental regulation in Germany.*¹—The royal chief office of police has published under date of February 20, 1901, the following announcement in the newspapers:

"According to verdicts of the high courts of appeal, all persons who, without having graduated in Germany, style themselves Arzt, Wundarzt, Augenarzt, Geburtshelfer, Zahnarzt, Nervenarzt, Naturarzt, etc., or use any title containing the word 'Arzt,' are trespassers against the law. Also the culpability is not excluded by additions, as for instance, 'graduated abroad,' 'not graduated,' etc., which are intended to show that the person in question has not obtained approbation by license in Germany. Such persons may expect the same prosecution as those who style themselves in such a manner as to make people believe that the holder of the title has passed an official medical examination; and it is immaterial as to whether such person has so styled himself hitherto without being prosecuted."

Herewith the question again arises whether the titles "in Amerika approbierter Zahnarzt" or "amerikanischer Zahnarzt" are a misdemeanor against section 143 (R. G. O.), Trade Regulations of the Empire, and are again threatened with prosecution. According to the verdicts of the Berlin Kammergericht (court of appeal) the question of the culpability of the one styling himself "Zahnarzt," with explanatory addition or without, whenever such person uses it, not having graduated from a German university, must be finally confirmed.

After the Landes Central Behörden of the German Empire have made the use of a foreign title in future, as doctor, etc., dependent upon special permission, there has now been submitted by the home office of the Empire the draft of a decree to the competent committee of the Bundesrath, in accordance with which the further use of foreign titles, which hitherto have not been objected to, is forbidden, if the same have been acquired under conditions less stringent than they can be acquired in Germany. All American titles will be forbidden as soon as this decree is sanctioned.

Societies belonging to the union of German Zahnkünstler have proposed a private examination of their members and the bestowing upon them of a diploma as "examined dentist," but it is asserted that the Central Behörden intend taking energetic measures against this new styling of those who have not graduated from German universities, as soon as some one publicly makes use of this title, as a punishable contravention of the law is seen in it. The only persons allowed to style themselves "examined" are those who have passed an examination before a state commission, or a commission which has been authorized by the state authorities. The styling "dentist" is forbidden as well, because in other cultivated countries by the term "dentist" is understood a person duly licensed by the authorities (authorized) to practice dentistry.

CHAPTER XXXVII.

AGRICULTURAL AND MECHANICAL COLLEGES.

The reports for the year ending June 30, 1900, received from the presidents of the institutions endowed by the acts of Congress approved July 2, 1862, and August 30, 1890, for the establishment and for the more complete endowment and support of colleges for the benefit of agriculture and the mechanic arts show a decided increase in instructors, students, property, income, etc., as well as the inauguration of new lines of work. The number of such institutions has increased from 64 to 65 by the establishment in Oklahoma of the Colored Agricultural and Normal University at Langston, Okla., and its designation by the legislature to receive a portion of the funds authorized to be paid annually to the Territory of Oklahoma by the act of Congress approved August 30, 1890. Women are admitted to all but 10 of the 65 institutions. Those not admitting women are: Delaware College, Georgia State College of Agriculture and Mechanic Arts, Louisiana State University, Maryland Agricultural College, Alcorn Agricultural and Mechanical College (Mississippi), Rutgers Scientific School (New Jersey), North Carolina College of Agriculture and Mechanic Arts, Clemson College (South Carolina), Agricultural and Mechanical College of Texas, and Virginia Agricultural and Mechanical College.

TEXTILE INDUSTRY.

Instruction in textile industry with special reference to the manufacture of cotton fabrics has been undertaken by three of the agricultural colleges of the South.¹

The Clemson College of South Carolina established a textile course in 1898. The textile building is a two-story brick structure of modern cotton-mill design, protected from fire by automatic sprinklers and a 10,000-gallon water tank in the tower. The first floor is occupied by recitation rooms, carding and spinning rooms, and office. On the second floor are the dyeing and weaving departments. Much of the equipment of the textile building was donated to the school by manufacturers of machinery in the North and South. In the freshman and sophomore years the textile course is the same as the mechanical course, but specialization in textile subjects begins in the junior year. The course in textile industry, leading to the degree of bachelor of science, is as follows:

FRESHMAN YEAR.

Subjects.	Hours per week.		Subjects.	Hours per week.	
	First term.	Second term.		First term.	Second term.
Mathematics	5	5	Woodwork	3	3
English	4	4	Mechanical drawing	3	3
Composition and spelling	1	1	Free-hand drawing	4	4
History	3	3	Forge work	3	3
Agriculture	2	2	Military drill	2	2

SOPHOMORE YEAR.

Mathematics	5	5	Mechanical drawing	3	2
English	3	3	Foundry	3	3
Chemistry	3	3	Chemical laboratory	4	2
Natural philosophy	2	2	Descriptive geometry	0	2
History	2	2	Military drill	2	2
Woodwork	3	3			

¹ The State of Georgia has a textile department at the State School of Technology, Atlanta, Ga. a Chemistry first half; surveying second half.

JUNIOR YEAR.

Subjects.	Hours per week.		Subjects.	Hours per week.	
	First term.	Second term.		First term.	Second term.
Mathematics	5	5	English	2	2
Chemistry	2	2	Mechanics	2	0
Chemical laboratory	4	4	Machine shop	4	4
Textile industry	3	5	Military science	1	1
Textile industry (practice)	5	5	Military drill	2	2

SENIOR YEAR.

Textile industry	6	6	English	2	2
Textile industry (practice)	11	11	History	2	2
Mechanism	1	0	Military science	1	1
Steam engine	0	1	Military drill	2	2

The North Carolina College of Agriculture and Mechanic Arts established two courses of study in textile industry in 1899—a four years' course leading to the degree of bachelor of engineering, and a short or manual course of two years. As in the case of the Clemson College, specialization in the regular course begins in the junior year. The courses are as follows:

REGULAR COURSE.

Subjects.	Hours per week.			Subjects.	Hours per week.		
	First term.	Second term.	Third term.		First term.	Second term.	Third term.
FRESHMAN YEAR.				JUNIOR YEAR.			
Free-hand drawing	4			Cotton milling	5	5	5

				Military drill	3	3	3

The Mississippi Agricultural and Mechanical College announces the establishment of a textile department for the year 1900-1901, but has not yet published an outline of the course of study provided. The building for the textile school is to cost \$20,000.

The nature of the work included in the general term "textile industry" is shown in the following statement taken from the catalogue of Clemson College for the year 1899-1900:

Chemistry and dyeing.—Physical and chemical nature of the cotton fiber, bleaching agents, mordants and dyestuffs, coal-tar colors, aniline dyes, preparation and application of mordants and dyestuffs to cotton; experimental dyeing of loose cottons, yarns, and cloth; practical work in the dyehouse.

Carding and spinning.—The cottons of the world; their suitability for different yarns; botany of cotton; structure and composition of the fiber; selection of cotton for different classes of work; classification of cotton; conditions, favorable and unfavorable, to the manipulation of the fiber; strength of fiber; detection of faults in raw cotton; picking and handling of cotton; advantages and disadvantages of the saw gin, construction, speeds, etc.; roller gin, uses, speed, production, etc.; baling of cotton, square and cylindrical bales; compressing and its effects on the fiber; testing for cotton and other fibers.

Mixing.—Reasons for mixing cottons; hand and machine mixing; the advantages and disadvantages of each system; blending, methods of blending, combining of cottons of different characteristics to produce special effects in the yarns.

Picker room.—The arrangement and construction of picker rooms; dust trunks, their forms, construction and use; automatic feeders, their construction, action of the feeder on the cotton, speeds and adjustments of the various parts; the breaker lapper, use, construction, different kinds of beaters, speeds and settings of the different parts of the machine; intermediate and finisher lappers, feed rolls, evener motions; different kinds of beaters, speeds, settings, etc., advantages of each; shape and setting of screens; regulation of air currents; formation of a good lap; care and operation of lapper; all calculations on the above machines, drafts, length of laps, etc.

Carding.—The principle and purpose of carding; different types of cards; construction of the feed plate, the licker-in, cylinder, doffer, coiler head, flats, screens, etc.; the different settings of the cards to produce the best results on different lengths and qualities of fibers; the regulation of waste made in the card; card clothing, and different methods of grinding the same; setting of the various parts of the card; calculations.

Railway heads and draw frames.—Object, use, construction, advantages, and disadvantages of railway heads; comparing metallic and leather rolls; explanation of stop motions and evener; calculations. Principle of drawing slivers; object and purpose of draw frames; method of setting the rolls; size and speed of rolls; distribution of draft between the rolls; stop motions and calculations.

Fly frames.—Slubber, intermediate, roving, and jack frames; construction of the modern fly frames; the bobbin and flyer lead, method of driving the bobbin in each; the differential motion and its purpose; traverse, builder, and stop motions; the formation of a bobbin; drawing rolls and their adjustment; calculations for drafts, twist, lay, tension, and other gears.

Spinning both on frames and mules.—Construction and use of the ring spinning frame: its principal parts, such as rings, spindles, travelers, builder motion, etc.; the effect of twist on the strength, color, and elasticity of the yarn; calculations; the spinning mule and its uses; special features; description of the head stock, cam shaft, and other parts; the coping rail and formation of a cop; different movements in the mule and timing of the same; calculations.

Miscellaneous.—Reelings; bandling; twisting; doubling; spooling; warping, etc.; calculations and information regarding each process.

Slashing.—The slasher, construction and use; necessity for slashing; creel, cylinders, size box, etc.; mixing of size; different sizing ingredients for special purposes; methods of preparing warps for the slasher.

Designing.—Principles generally used in the formation of weaves; design paper and the method of representing weaves on same; explanation of warp and filling; the plain or cotton weave; twill weaves, satin weaves, and methods of construction; foundation weave derived from plain weaves; rib weaves, basket weaves; weaves derived from twills and broken twills; steep or diagonal, skip, reclining and curve twills; combination steep twills, corkscrew twills, entwining twills, twills producing checker-board effects, pointed twills; the method of making drawing-in drafts, chain drafts; methods used in reducing weaves to the lowest number of harness; plain and fancy drafts—point, skip, mixed, or crossed draws; rules for finding number of heddles required for each harness; fancy effects produced with the plain weaves using colored warp and filling; effects produced by using two or more colors on ribs and basket weaves; weaves derived from satins, shading of satin weaves, figured effects produced by using warp and filling satins; honeycomb weaves; imitation gauze weaves; fabrics constructed by combining weaves with one system of warp and two systems of filling; figuring with two warps and one filling; double cloth, construction of double-cloth weaves, methods of indicating them on design paper, stitching of double-cloth weaves to give figured effects, the double plain weave to give reversible figured effects; weaves for special fabrics—Bedford cords, pique, matelasses.

Jacquard designing.—Explanation of the Jacquard machine; Jacquard harness, tying up of the harness—the straight through, center, French and English systems of tying up; the single and double lift Jacquard, the single and double cylinder machine; the open and closed shed machine explained; method of laying out patterns for Jacquard designs, size of sketch required; enlarging and reducing figures from sketches; comber board and method of figuring texture for same; casting out of hooks to reduce texture of goods; card cutting, lacing and wiring.

Cloth analysis.—Methods used for arranging cloth for analysis; figuring the size of cotton, woolen, worsted, and silk yarns; calculations for converting one system of yarns into that of another; finding the weights, counts, etc., from the analysis; reed calculations.

This work takes up all classes of weaves that can be woven on harness, and gives the student a thorough knowledge of figuring yarns, weights, ends, picks per inch, etc. The results obtained in this manner are very instructive, as they show the good and the bad qualities of the various weaves and color effects.

Power-loom weaving.—Construction of the plain loom; various shedding motions; open-shed machine; side-cam loom, setting the cams; pick motion, methods of picking; take-up and let-off motions; box motion, drop box, skip box; timing and setting box motion; the dobby and its uses, pattern chains for single and double index dobbies, setting and timing of the dobby; leno motion and setting of the same; doup harness and setting of same; Jacquard loom analyzed and explained.

The equipment of the textile department of Clemson College consists of the following:

Pickers.—1 Atherton automatic feeder; 1 Atherton combination breaker and finisher lapper with evener motion.

Cards.—1 Saco & Pettee 40-inch revolving flat card; 1 Mason 40-inch revolving flat card; 1 Entwistle traverse wheel grinder; 2 Entwistle drum grinders; stripping and burnishing rolls; complete set carder's tools.

Combing.—1 silver lap machine; 1 ribbon lapper; 1 combing machine.

Railway heads.—1 Saco & Pettee railway head with evening motion, stop motion, and metallic rolls; 1 Mason railway head with evening motion, stop motion, and metallic rolls.

Drawing.—1 Saco & Pettee drawing frame, 4 deliveries, stop motion, and metallic rolls; 1 Mason drawing frame, 4 deliveries, stop motion, and metallic rolls.

Fly frames.—1 Saco & Pettee 40-spindle slubber with latest improved differential motion; 1 Saco & Pettee 60-spindle intermediate roving frame with latest improved differential motion; 1 Saco & Pettee 80-spindle fine roving frame with latest improved differential motion.

Ring spinning.—1 Saco & Pettee combination warp and filling ring spinning frame, 128 spindles; 1 Mason combination warp and filling ring spinning frame, 112 spindles.

Mule spinning.—1 Mason spinning mule, 120 spindles, 1 $\frac{1}{4}$ -inch gauge, with all latest improvements.

Spooling.—1 Draper spooler, 40 spindles; 1 Saco & Pettee spooler, 72 spindles.

Twisting.—1 Draper combination wet and dry twister, 48 spindles.

Winding.—1 Schaum & Uhlringer bobbin winder; 1 Atwood-Morrison Company winder.

Reeling.—1 D. A. Tompkins Company 50-spindle adjustable reel.

Warping.—1 Draper beaming machine.

Hand looms.—Hand-loom weave room fully equipped with 4 by 4 box looms, fitted with 30 harness-shedding engines for fancy cottons; also drawing-in frames, warping frames, beaming frames, etc.

Power looms.—One 28-inch Northrop loom with warp stop motion and automatic filling magazine; one 40-inch Northrop loom with cams for weaving up to 5-harness fabrics; 1 Mason 4 by 1 drop-box loom with Stafford 20-harness dobby; 1 Mason 40-inch loom with Stafford 20-harness dobby; 1 Mason 24-harness dobby loom; 1 Stafford 20-harness loom with leno attachment; 1 Stafford dress-goods loom with Stafford 400-hook, single lift, swing cylinder, Jacquard.

Jacquard card cutting.—1 John Royle French index foot-power card cutter; 3 card-lacing frames.

STATISTICS.

The number of instructors in the agricultural and mechanical departments of these institutions has increased from 1,958 in 1899 to 2,321 in 1900. This increase is at the rate of 18.4 per cent. The increase in men is 12.7 per cent and in women 18.2 per cent.

The students in the undergraduate courses of the agricultural and mechanical departments have increased from 15,084 to 18,066, or at the rate of 19.8 per cent. The men have increased at a greater rate than the women—men 20.9 per cent and women 14.3 per cent. A considerable increase is shown in the number of students pursuing courses of study in agriculture and in the various branches of engineering.

The income shows an increase of \$918,733. This is due to greatly increased State appropriations and the increase in endowment funds.

Summary of statistics.

NEW BUILDINGS.

The reports of 27 institutions show that during the year there were erected or in course of construction new buildings costing \$1,159,224. A description of the buildings, together with their purpose and cost, so far as reported, are given in the following pages:

Alabama Polytechnic Institute.—The forge and foundry building of the mechanic arts department has been enlarged and the equipment increased. A separate building for the experiment station chemical laboratory has been built and the laboratory for instruction enlarged. A second greenhouse for the horticultural department has also been built. These improvements cost \$2,402.83.

University of Arizona.—A substantial brick dormitory has been built for the use of male students and teachers at a cost of \$12,000. It contains 40 rooms and has many modern conveniences.

University of Arkansas.—A valuable addition has been made to the chemical and physical laboratory. It is 60 by 30 feet, two stories high, with basement built of bricks with stone foundation. A neat cottage residence for the farm manager has been erected. Many important repairs and improvements have been made on the farm lands and buildings and on the station grounds.

University of California.—Additions to buildings have been made as follows: Chemical laboratory, cost \$5,167; students' observatory, cost \$1,575; gymnasium, cost \$13,387.

Florida Agricultural College.—Foster Hall has been erected as a residence for the director of the experiment station and as a home for a limited number of women students. The building will furnish accommodations for 30 young women. The cost of the building, grounds, fencing, and furniture will aggregate about \$9,000.

University of Idaho.—The State has completed and furnished the main building, which has been incomplete for a number of years. This was done at a cost of \$14,000. A farm house costing \$1,000 has been erected, and plans are now drawn for a new barn, to cost about \$1,300.

University of Illinois.—An agricultural building, costing \$150,000, will be ready for occupancy September 1, 1900. It consists of four separate structures built around an open court and connected by corridors. The main building is 248 feet long, from 50 to 100 feet in depth, and three stories high, and contains offices, class rooms, and laboratories for the departments of agronomy, animal husbandry, dairy husbandry, horticulture, and veterinary science; offices of the State entomologist; the chemical laboratory of the experiment station; commodious administration rooms; an assembly room with a seating capacity of 500; and on each floor a fireproof vault for records. The other three buildings are each 45 by 116 feet and two stories high; one is for dairy manufactures, one for farm machinery, and one for veterinary science and stock judging. An adjacent glass structure serves the departments of agronomy and horticulture. The building is of stone and brick, roofed with slate, and contains 113 rooms and a total floor space of nearly 2 acres.

Purdue University (Indiana).—A portion of the men's dormitory has been remodeled for recitation rooms. Eleven additional rooms are thus made available for class work. Over 11,000 square feet of cement walks have been laid on the campus, completing the work so far as present needs go. The equipment in all departments has been added to, to the value of not less than \$10,000.

Iowa State College of Agriculture and Mechanic Arts.—A horse barn, composed of brick walls, slate roof, and modern equipment, has been contracted for \$13,500. A house for the residence of the president of the college is building, and when completed will cost about \$12,000. The contract has been let for an engineering

hall, to house the civil, mechanical, electrical, and mining engineering departments. The building is four stories and fireproof. The contract price is \$154,800.

Kansas State Agricultural College.—The agricultural hall, 90 by 95 feet, two stories and basement, contains offices, class rooms, and laboratories for the department of agriculture. It is well equipped with modern improved machinery for butter and cheese making, milk testing, etc. All the workrooms are lined with opalite tiling. The building cost \$23,000; equipment and apparatus \$19,286. The dairy barn is 40 by 175 feet, and will be fitted up with modern swinging stalls for 80 head of cows, arranged in two rows, with driveway between. Cost of building \$3,000. Additions have been made to Mechanics Hall at a cost of \$9,000, and to the heating plant at a cost of \$5,000.

Louisiana State University.—Garig Hall, costing about \$10,000, is a handsome brick building facing the parade ground on the east. It is a gift to the university from Mr. William Garig, of Baton Rouge, and is used as an assembly hall, having a seating capacity of about 1,200. A two-story wooden laboratory for the experiment station, costing \$2,500, and a two-story wooden addition to the mechanical workshop, costing \$3,200, were also erected during the year.

University of Maine.—A drill hall is in process of erection at a cost of about \$25,000.

Michigan Agricultural College.—Three buildings are now in course of construction, and will be ready for occupancy during the next school year.

The women's building will cost when completed, with the furnishings, \$95,000. It is well constructed of finely pressed brick and red sandstone, and has hard wood floors, red-oak trimmings, and adamant plaster throughout. The heating, plumbing, and lighting are of modern design and of first-class quality of material. In this building are the offices and private rooms of the dean and of the various women instructors; a suite of four rooms for the department of domestic art; a kitchen laboratory, with adjacent dining room for classes in cooking; a large recitation room; pleasant parlors; a large dining room, kitchen, and serving room on third floor; a two-story gymnasium; music rooms; waiting and reception rooms; toilet and bath rooms; living rooms for 120 young women.

The dairy building is a brick structure of 64 by 70 feet, two stories high, with basement. In the basement are the storerooms, cold storage, cheese-curing rooms, lockers, and wash rooms for students. On the first floor, are the home dairy room, butter room, cheese room, wash room, and testing room. The second floor is given up to class rooms, offices, and laboratories. The cost of the building is \$15,000.

The barn is a two-story building, 44 by 72 feet, with a wing 40 by 76 feet.

University of Minnesota.—A building for instruction in horticulture and forestry, costing \$30,000, was erected. It consists of a three-story brick building, 80 by 50 feet, with adjoining greenhouses 66 by 125 feet in area.

Mississippi Agricultural and Mechanical College.—Since the last report there has been erected a new creamery building at a cost of more than \$2,000, and equipped at an additional cost of more than \$2,000. There is in course of construction now a new textile school building to cost \$20,000; also a new dormitory and chapel to cost about \$30,000.

Alcorn Agricultural and Mechanical College.—About \$4,000 has been expended in erecting a professor's residence and making general repairs.

Missouri School of Mines and Metallurgy.—Erected one temporary building for lecture and drawing purposes; also extended the building used for shops by a 50-foot addition. Both buildings are temporary in nature and were necessitated by the crowded condition of the school.

Montana College of Agriculture and Mechanic Arts.—A new building has been erected for a gymnasium at a cost of \$1,100. Additional ground has been pur-

chased amounting to 35 acres, at a cost of \$4,000, as an addition to the college campus.

University of Nebraska.—University Soldiers' Memorial Hall, an addition to Grant Memorial Hall (armory and gymnasium), is now in course of construction. It is designed for use in giving enlarged accommodations for the military department, and also as a women's gymnasium, but for a time will provide a temporary auditorium and chapel, with a seating capacity of 1,500.

New Mexico College of Agriculture and Mechanic Arts.—A large adobe corral, for the accommodation of the horses, cattle, feed, agricultural implements, etc., with a well and windmill, is partly completed, and will cost, when finished, about \$2,000.

North Dakota Agricultural College.—A new building, 40 feet square, has been added to the drill hall, giving the building now the shape of the letter T. The new portion corresponds in general appearance to the main building, and has been fitted up with lockers, dressing rooms, and shower baths for the benefit of the athletic association; also a room for the custodian of the gymnasium. The new building is steam heated and has water connections.

Oklahoma Agricultural and Mechanical College.—Two two-story brick buildings, with basements, have been erected; a library building, costing \$20,000; and a chemistry building, costing \$8,000. The library building will contain, besides the library, the departments of languages, history, and biology.

Oregon State Agricultural College.—The mechanical hall has been completed at an additional cost of \$8,416. A steam heating plant has been put in at a cost of \$18,877.

Colored Normal, Industrial, Agricultural and Mechanical College (South Carolina).—A barn and stables have been erected, at a cost of \$1,500. There is now in course of construction a manual-training building 125 by 90 feet, three stories high. The first floor of the north wing will contain the woodworking by machinery, and the south wing the blacksmith, wheelwright, and machine shops. The second floor of the north wing will contain the textile school, and the third floor the saddling, shoemaking, and tailoring shops. The second floor of the south wing will contain the plumbing and tinning shops, and the third floor the painting and glazing shops. The cost of the building will amount to about \$10,000.

South Dakota Agricultural College.—Two new buildings have been completed and occupied during the year. The gymnasium is a brick structure 66 by 70 feet and two stories high. The ground floor is devoted to a girls' gymnasium, offices, bath rooms, etc. The second floor consists of one room without posts and is used as a drill hall and gymnasium for the cadets. The cost of the building was \$12,500. The dairy building, costing \$7,500, is also two stories and of brick, 32 by 52 feet. The ground floor is occupied by the dairy proper, and has the usual machinery, such as separators, vats, churns, etc. Off from the main room are the laboratory, cheese-making room, and storage room. The second floor contains class rooms, offices, and the agricultural dairy museum.

Agricultural and Mechanical College of Texas.—There have been completed during the year Foster Hall, costing \$28,000, three professors' residences and a bachelors' hall, costing \$6,500, and an artesian well, costing \$2,500. Nearing completion are an agricultural and horticultural building, costing \$31,000, and a sewer system, costing \$8,000. Foster Hall is a brick dormitory, and consists of three separate parts; the central one is four stories high and contains 19 rooms; the two ends are three stories high and contain 18 rooms each. The building has a capacity for 165 students. The Agricultural and Horticultural Building is planned to accommodate the agricultural and horticultural features of the college and experiment station by furnishing specially designed rooms for class instruction, laboratory investigations, museum purposes, butter and cheese making,

pasteurizing milk, canning fruits and vegetables, seed storeroom, photographic room, and the necessary offices for the accommodation of these departments. The building is 160 by 77 feet, covered with slate, two stories high, and built of brick. It will contain 27 rooms fitted with the best apparatus and machinery now in use for the instruction of students in the several branches of agriculture. The live-stock room will permit the introduction of animal subjects for the purposes of class instruction.

Prairie View State Normal and Industrial College, Prairie View, Tex.—A new three-story brick dormitory for boys, 29 rooms, cost \$10,000.

Virginia Agricultural and Mechanical College.—New barn, costing \$8,000, largely for experimental purposes; Y. M. C. A. Hall, cost \$20,000.

Washington Agricultural College.—Science Hall, costing \$53,000 and devoted to the departments of botany, zoology, agriculture, horticulture, bacteriology, geology, and museum, has been completed. It is 170 by 80 feet, three stories, pressed brick and sandstone. Ferry Hall, the boys' dormitory, costing \$40,000, is four stories, 140 by 90 feet, and is arranged for 180 students, with dining hall, kitchen, etc. The Mechanical Building has been enlarged by an addition 65 by 95 feet. A hospital has been fitted up for the veterinary department and 110 animals received for treatment during the year.

West Virginia Colored Institute.—There has been erected a new boys' dormitory, brick and stone, at a cost of \$16,000, and a brick addition to the Academic Building, at a cost of \$7,000. The third story of the girls' dormitory has been finished at a cost of \$500.

University of Wisconsin.—The horse barn of the Agricultural College has been thoroughly rebuilt at an expenditure of about \$10,000. A central heating plant, costing \$17,000, has been installed in a separate building, heat being conducted by steam pipes through tunnels to buildings near enough to make this practicable. A cheese-curing room, costing about \$7,000, is in process of erection for experimental work on the curing of cheese. In this new cheese-curing building facilities will be provided for the manufacture of so-called foreign cheese. A building for the College of Engineering, to cost \$100,000, is in process of erection, to be completed about October 1, 1900.

University of Wyoming.—A new science hall, to cost \$35,000, is in course of construction. About 20 acres of land have been added to the campus and 80 acres to the experiment-station farm.

CHANGES IN COURSES OR METHODS OF INSTRUCTION.

The work of the agricultural and mechanical colleges is constantly broadened by the strengthening of existing courses of study and by the establishment of new courses. The past few years have witnessed the organization of special courses of study in a large number of the institutions, prominent among which are the short winter courses in agriculture for farmers and the special courses in dairying. These courses are of special benefit to and intended for persons who can not spare the time to complete a regular college course. The new courses established during the year by the various institutions, as well as the changes in courses or methods of instruction, are as follows:

University of Arizona.—Courses in domestic science were added to the curriculum, and classes were maintained through the year in cooking, plain sewing, and dressmaking. The young women showed much enthusiasm in the prosecution of this work.

University of Arkansas.—A department of elocution and physical culture has been organized. This has been attended mainly and quite largely by women. Besides various experiments in farm crops, increased attention has been devoted to horticulture and pomology.

Colorado Agricultural College.—The preparatory year has been dropped.

Connecticut Agricultural College.—The only change made in the course of study was from the regular course for the senior class to three elective courses, beginning with the winter term: (a) General course; (b) course in agriculture; (c) course in horticulture. In these courses students were permitted to specialize to a certain extent.

Florida Agricultural College.—Provision has been made for the study of Greek and the adoption of a full classical course.

Purdue University (Indiana).—The winter course in agriculture put into active operation for the first time industrial courses especially designed for women, as follows: Floriculture, household economy, household sanitation, domestic economy, botany, drawing, studies in literature. About 20 women attended one or another of these courses.

Iowa State College of Agriculture and Mechanic Arts.—A two-year course in mining engineering, a review course in mining engineering, a two-year course in ceramics, and a course in technology have been added. The review course in mining engineering is designed to assist young men to meet the requirements of the law passed by the last legislature requiring examinations of mine foremen, pit bosses, and hoisting engineers.

Kansas State Agricultural College.—The requirements for admission were raised by the addition of physiology, composition, one-term algebra, and bookkeeping. The work of the first year was made the same in all courses except such difference as sex requires. An electrical engineering course was added.

Louisiana State University.—A commercial course of four years leading to the degree of B. S. has been established.

Southern University (Louisiana).—The printing department has been made more elaborate and it has done much better work. The boys of the printing class, who learned all they know in that line at the institution, have all secured work for the summer vacation, on good pay, as printers, in New Orleans.

University of Maine.—The classical course was inaugurated in the fall of 1899.

Massachusetts Agricultural College.—The only changes in the course have been making French, German, and geology required studies in freshman, sophomore, and junior years, respectively, and electives in senior year. The course in chemistry has been greatly extended.

Massachusetts Institute of Technology.—Two new courses have been established, one in landscape architecture and the other in heating and ventilation. In the former, besides the time spent in the general courses given in the course in architecture, time is given to horticulture, surveying, topographical drawing, biology, and botany, natural landscape, curves and earthworks, geology, landscape design, landscape gardening, sanitary engineering and drainage, and masonry. In the latter, besides the subjects followed in the course in mechanical engineering, the subjects of hygiene of ventilation, dynamo electric machinery, and heating and ventilation in a less elementary way are treated.

University of Minnesota.—Texts or class bulletins have been prepared by members of the faculty of the School of Agriculture and of the College of Agriculture on the following subjects: Soils and Fertilizers; Sheep in Minnesota; Forage Crops; Feeding Dairy Cattle, and Sewing. The need of texts and class helps is fully appreciated, and several other text-books on the industrial and scientific lines taught in the agricultural high school are nearing completion. Text-books are becoming an imperative necessity, since the School of Agriculture last year registered 407 students, the College of Agriculture 23 students, and the Dairy School 73 students. Women having been admitted to the Agricultural High School three years ago, the four-year college course was last year modified by the addition of subjects in household economics and other more general subjects, and

women graduates of the Agricultural High School are now admitted to the college course.

The work in mechanical engineering shows a healthy development. The courses in railroad engineering have been materially strengthened, and especial attention has been given to the practice of locomotive testing, with very satisfactory results. Cooperation with the railway companies in the vicinity has been found mutually advantageous.

Mississippi Agricultural and Mechanical College.—A course in dairy husbandry and a textile course are to be added.

Montana College of Agriculture and Mechanic Arts.—A course in civil engineering has been added.

University of Nebraska.—In the Industrial College no changes have been made in the curriculum, as the group system, consisting of the general scientific and general agricultural with 8 special and 4 technical groups, still prevails. The last of the 8 technical groups, namely, that of chemistry and domestic science, was added this year. In the engineering groups the studies of the first three years have been more closely correlated. Owing to the advanced stage to which sugar culture in Nebraska has grown the past few years, the sugar school has been discontinued.

New Hampshire College of Agriculture and Mechanic Arts.—The standard is being raised as rapidly as possible, and an increasing number of the freshmen are graduates of good preparatory schools.

New Mexico College of Agriculture and Mechanic Arts.—The course of study has been revised so as to make a strong and well-balanced course in agriculture, beginning with the academic year 1900-1901, instead of the merely nominal course heretofore offered. Heretofore there had been no live stock on the college farm except the work horses, and all that related to animal husbandry had to be omitted from the course in agriculture, but even such theoretical instruction in scientific agriculture as might have been given was not offered, and the strength of the institution went into the scientific and mechanical engineering courses. Henceforth a good course in agriculture will be offered; the addition of a professor of civil engineering to the instructional force will make the civil engineering course a reality instead of a name; the mechanical engineering course will be stronger in the higher and post-graduate grades by reason of added equipment and an enlarged staff; and the general or scientific course has been so revised as to offer at the same time a more thorough and uniform educational foundation for all who take it and a wider range of election within the prescribed limits.

Cornell University, Ithaca, N. Y.—The legislature appropriated \$10,000 to the college of agriculture for promoting agricultural knowledge throughout the State from May 1 to October 1, 1900, and \$35,000 for continuing the work from October 1, 1900, to October 1, 1901. The work carried on by reason of these appropriations is divided into two bureaus—investigations and experiments, and university extension and nature-study work. Investigations are carried on through the cooperation of many farmers, who give their time and attention to the experiments mapped out by the field agents. These investigations are divided into two general groups—one, the testing of soils through application of fertilizers of various kinds under different conditions and to different crops. In addition, many soils are analyzed. The tillage experiments have also been conducted by cooperation with the farmers. Three leading farm crops have been selected, all requiring interculture. The object of these investigations is to discover what effect superior tillage has on productivity. Judging from results, nothing which the college has done gives promise of improving tillage more than this class of investigation.

The extension of agricultural knowledge is also carried on by means of printed literature and lectures, and is arranged under six principal heads:

1. Farmers' reading course, on the correspondence plan.
2. Publication of teachers' leaflets on nature study, treating in a popular form many of the common things of country life.
3. Junior naturalist clubs, which consist of a cooperation with the teacher in interesting pupils to observe and study salient principles of life of some of the common things.
4. Home nature-study course, designed for teachers, on the correspondence plan.
5. Lectures at teachers' institutes on topics pertaining to rural life.
6. Summer schools.

The farmers' reading course shows a most gratifying development. Ten thousand copies of each reading lesson sufficed to supply the demand last year; now 20,000 copies of each edition do not meet all the wants. During the last year 175,000 pages of instructional printed matter and 20,000 circulars and circular letters were sent to the farmers' reading-course students.

During the year the teachers' leaflets on nature study have been changed, and they are now issued at regular intervals in the form of a quarterly. Four editions have been published, containing 250,000 pages.

The junior naturalist clubs have grown during the year from 2,000 members to 35,000.

The home nature-study course is a correspondence course, designed exclusively for teachers, and numbers some 2,500 members.

Many lectures at teachers' institutes have been given during the year, and about fifty lectures have been delivered before various farmers' organizations. It is estimated that more than 30,000 persons received instruction by means of these lectures.

North Carolina College of Agriculture and Mechanic Arts.—The course of instruction has been enlarged by the addition of a textile department for instruction in cotton manufacturing. All the courses of instruction have been somewhat enlarged by additional requirements of shop work, drawing and designing, laboratory and field work. Enlarged instruction has been provided in industrial chemistry and electrical engineering. The college will not receive, hereafter, students desiring merely general education without technical instruction.

Oklahoma Agricultural and Mechanical College.—The courses of study were materially revised and enlarged over previous years. Courses were offered as follows: General science and literature course; agricultural course; mechanical engineering course; courses in special sciences: 1, chemistry; 2, biology; 3, botany. All of these courses extend through four years and lead to the degree of bachelor of science. A ten weeks' course in agriculture and the mechanic arts was given, beginning January 1, 1900. Instruction was given in stenography and typewriting and printing.

Pennsylvania State College.—Three changes have been made during the past year in the organization of the work of the college, which are regarded as of more than passing importance:

1. The work of the college year has been divided into two semesters, with examinations at the close of each, in the place of three sessions with three examinations, as heretofore. Students enter the freshman year with very different qualities of preparation, representing almost every grade of preparatory work throughout the State (55 counties of Pennsylvania being represented in the college this year), and the consequence has been that many have proved unable to stand the test of examinations at the close of the fall session. Under the new arrangement, such students will continue advanced work until the Christmas holidays, and then return after a period of respite and refreshment to review and take examination on

the work of the first session. An additional advantage of the new arrangement is a better sequence and coordination of studies in different departments.

2. Increased provision has been made for electives in English, French, and German, history, political science, and philosophy, with a view to making the general courses as thorough and attractive as the technical courses already are. In the general courses students may now drop mathematics at the end of the freshman year—that is, on the completion of college algebra, solid geometry, and plane and solid trigonometry—with an option subsequently between higher mathematics and certain branches of the general subjects above named.

3. The classical course has been thoroughly recast and expanded, with a view to making ample provision for such students as desire to take full work in Latin and Greek.

South Dakota Agricultural College.—Several important changes have been perfected in the courses of study. Forty-three courses above subfreshman are required of all candidates for the B. S. degree. These courses are quite uniform through the subfreshman and freshman years. After that, students may elect one study each term of the junior year and two each term of the senior year. Five of these electives must be in some one line of work, in which the student has already completed the amount required for graduation. All students are required to take one course in agriculture and one in horticulture. These are prepared with special care, so as to emphasize the importance of these studies as life vocations and to show how scientific knowledge may be useful in the improvement of agricultural methods and processes. A short course of twelve weeks' work in domestic science and another of two terms of twenty-four weeks in public-school drawing have been established. The institution is also conducting home reading courses, which are becoming quite popular throughout the State.

University of Tennessee.—The four years' course leading to the degree of B. S. in agriculture has been rearranged and greatly strengthened. A twelve weeks' course in agriculture, beginning with the opening of the second term in January and continuing until its close, was established. This course is designed especially to present in a practical way the results of the scientific experiments, etc., in agriculture, horticulture, stock raising, dairying, etc. A professorship of horticulture and forestry was established and an enlarged course in horticulture was adopted. The session has been divided into three terms instead of two, as heretofore. This was done to bring the opening of the second term immediately after the Christmas holidays, and thus make provision for new students desiring to enter at that time.

Virginia Agricultural and Mechanical College.—New course in bacteriology, also in Latin, making a three years' course in this language.

Hampton Normal and Agricultural Institute.—While the courses in agriculture have been much the same as during the previous years, it is felt that advance has been made along the following lines: Instruction in agriculture has been given to a larger number of pupils than heretofore; the time devoted to the subject has been extended; the method of presenting the subject to the pupils has been improved; a greater interest in the subject has been developed in the pupils; the amount of subject-matter treated has been enlarged. The junior class, which formerly received only one lesson per week, and that at night, has received four lessons per week during the past year, and all in the daytime. All the girls in the day school, except the middle-class girls, received the same instruction that was given to the boys. The method of presenting the subject has been more of the laboratory and field-observation method. It has been nature teaching with a practical application to the farm.

Instruction in agriculture has been introduced into one of the county schools over which the institution has control. This school is located on the institute grounds and numbers from 300 to 400 pupils, ranging in age from 3 to 17 years.

This year a school garden was conducted for these children by way of experiment. The experiment was so successful that a permanent garden will be laid out this fall. One hundred and seventy beds, ranging in size from 3 by 4 feet to 10 by 20 feet, were laid out and two pupils assigned to each bed. Vegetables and flowers were planted. The children took great pride in having gardens of their own, and many gardens were started at home as a result of their work. Aside from this and the interest and pleasure the children took in the gardens, three ideas, important factors in the solving of the negro problem, seemed to stand out and develop in the minds of the children: (1) The idea of possession, brought out by the individual bed system; (2) the idea of production, brought out and strengthened by allowing the children to carry home the products of their gardens; (3) the idea of cooperation, by having much of the work done as class work, all doing the same kind of work during part of each period.

Washington Agricultural College.—The course in veterinary science has been extended to three years.

West Virginia Colored Institute.—The only change in methods of instruction was the correlation of subjects. This year, for the first time, it has been possible to place kindred subjects under the direction of one teacher.

University of Wisconsin.—At a meeting held April 17, 1900, the board of regents established a school of commerce to supply facilities for the training of young men who desire to enter business careers, especially in such fields as domestic and foreign commerce and banking, or branches of the public service, like the consular, in which a knowledge of business is essential. Students who complete the prescribed course of study will receive diplomas conferring upon them the degree of bachelor of commercial science.

FARMERS' INSTITUTES.

According to the reports received from the agricultural and mechanical colleges endowed by acts of Congress, thirty-five of them took part in farmers' institute work during the year. The institutes are growing rapidly in popularity, and the demand for them is becoming so great in some of the States that the question of supplying instructors at institutes by the agricultural colleges is becoming serious. The number of institutes held in Kansas has grown from 10 in 1888-89 to 136 in 1899-1900, and for the six months ending December 31, 1900, twenty-seven different speakers from the Kansas Agricultural College attended 153 farmers' institutes. One of the speakers attended 49 institutes, traveling 7,648 miles; another attended 20, traveling 3,346 miles. The number of institutes attended by the twenty-seven speakers is as follows:

Number of teachers.	Number of institutes attended.	Number of teachers.	Number of institutes attended.	Number of teachers.	Number of institutes attended.
1	49	1	11	1	5
1	47	1	10	3	4
1	43	2	9	1	3
2	20	1	8	3	2
1	16	1	7	7	1

In some of the States the farmers' institutes are under the direct control of the agricultural colleges, while in others they are under the management of the State secretary or commissioner of agriculture. Even when the institutes are not under the control of the colleges these institutions furnish a great many of the lecturers. The following statements, made by the presidents of the several institutions, give some idea as to the work done by the staffs thereof in the line of farmers' institute work:

Alabama Polytechnic Institute.—One of the professors in the agricultural department was, two years since, appointed director of farmers' institutes. Since then a large part of every vacation is spent in conducting institutes with the farmers in different sections of the State. In some localities much interest is developed, and large numbers attend. In the past two years 25 institutes were held in 21 counties. In this way 2,000 farmers have received instruction of value.

University of Arizona.—The experiment station staff has organized, conducted, or materially assisted in nine farmers' institutes or agricultural conventions during the year.

University of Arkansas.—A pomologist was appointed by the board of trustees last year. During the year he attended a number of agricultural meetings in the State and arranged with some half dozen farmers in different sections of the State to make experiments in fruit growing.

University of California.—About 80 farmers' institutes have been held during the year, with an average attendance of about 200. The localities visited are required to bear local expenses, such as hall rent, printing, etc. The university from its general fund bears the compensation and traveling expenses of university speakers. The expenditure is about \$4,000 per year, and there is no State appropriation for this work. The institutes are increasing in popularity from year to year.

Colorado Agricultural College.—Institutes were held at fifteen points in the State, with increased interest and number in attendance. Three things contributed to this increase: (1) The widening possibilities of the sugar-beet industry; (2) the threatened cantaloupe blight; (3) the renewed interest in stock interests on the part of the college. The best talent the college affords was sent to these gatherings. Help was given in arranging programmes.

Connecticut Agricultural College.—Nine of the college instructors have been in attendance upon farmers' institutes during the year. They always readily respond when called upon at institutes and grange meetings, speaking upon subjects related to agriculture, horticulture, and the mechanic arts.

Delaware College.—The staff of workers in the agricultural department devoted a great deal of time during the winter months to lecturing at farmers' institutes, grange meetings, and other gatherings of farmers and fruit growers.

Florida Agricultural College.—Several farmers' institutes have been held in different parts of the State. These have been under the direction of the professor of agriculture, and he has been assisted by several other members of the college faculty. The expenses of these meetings have been borne largely by the communities in which the institutes have been held. The attendance has been fair and the results gratifying.

Georgia State College of Agriculture and Mechanic Arts.—No systematic work in farmers' institutes was done this year. The president, on invitation and at his own expense, attended and addressed ten meetings of farmers.

Georgia State Industrial College.—A farmers' institute was held at the college on March 5, 1900. It was well attended and did much good.

University of Idaho.—Farmers' institutes have been held in nearly every important agricultural center in the State, which have been well attended and productive of much interest. A farmers' short course was given at the university also, which was regularly attended for a month by 31 practical farmers, none of whom were regular students.

Purdue University (Indiana).—The State appropriation of \$5,000 has been inadequate of late years to meet the increasing demands of farmers' institutes. This sum is supplemented by appropriations from the university funds which pay the salary of the superintendent and the general expenses of administration. The university also places its corps of professors at the disposal of the institutes as lecturers. During the past year there were held, under the direction of the superin-

tendent, 104 regular institutes, and in addition to these, about 45 independent or supplementary institutes.

Iowa State College of Agriculture and Mechanic Arts.—The members of the faculty, especially of the experiment station and agricultural departments, take an active part in institute work throughout the season. The law is such that the work is not under the supervision of the college, but the college authorities aid in every way practicable in the development and work of the farmers' institutes.

Kansas State Agricultural College.—Farmers' institutes have been organized in about 60 counties of the State, in which from two to four members of the faculty share with the people in lectures, essays, and discussions upon topics of most interest to farmers and their families. There were held during the year 136 institutes. The extraordinary growth of this work is shown by the following tabular statement:

Year.	Institutes.	Year.	Institutes.
1888-89	10	1894-95	22
1889-90	8	1895-96	22
1890-91	11	1896-97	19
1891-92	11	1897-98	30
1892-93	11	1898-99	63
1893-94	17	1899-1900	136

State Normal School for Colored Persons (Kentucky).—During commencement week "Agricultural Day" was a number on the programme. Farmers from the neighborhood were present and took part in the discussions. The following are some of the subjects discussed: Industrial development: How to manage a farm; Need of educated mechanics; Poultry raising by farmers' wives and daughters; Need of educated cooks; Dairying as a business; Sewing in the home.

Louisiana State University.—A very successful series of farmers' institutes was held during the summer and fall of 1899 by the State commissioner of agriculture, most of the work being done by members of the university faculty and experiment station staff.

University of Maine.—There have been given at the university a series of institutes, continuing four days, of a rather higher grade of work than the ordinary farmers' institutes. In addition the director of the experiment station, the professor of horticulture and the professor of animal industry have attended about 150 institutes.

Massachusetts Agricultural College.—Seven members of the faculty have participated in farmers' institute work, averaging seven or eight institutes each.

Michigan Agricultural College.—The college has always taken an active part in farmers' institutes. For a number of years the faculty carried on this work without State aid. In recent years, however, the State has made an appropriation for this purpose, the amount for last year being \$5,500. The director of the experiment station is also superintendent of farmers' institutes. In this way the college keeps in close touch with this work. The members of the faculty take an active part and go from county to county addressing the meetings. Quite a number of them give up several weeks each year to this work; also a number of graduates of the college, who are now successful farmers, are among the principal State speakers. About 67 two-day institutes and 90 one-day institutes were held during the past year in all but about half a dozen counties of the State.

Mississippi Agricultural and Mechanical College.—There were held during the year about 30 farmers' institutes, which were a great success from every standpoint. The last legislature made an appropriation for this work.

Montana College of Agriculture and Mechanic Arts.—Institutes were held in several localities of the State, but the attendance was small. The work was done entirely under the supervision of the director of the experiment station.

University of Nebraska.—Fifty-one farmers' institutes were held by the university during the months of January, February, and March, covering all portions of the State. For this purpose \$1,500 was expended by the State superintendent of farmers' institutes, Prof. E. A. Burnett, head of the department of animal husbandry in the university. He was assisted in his work by specialists from the United States experiment station and the university, by speakers employed for special addresses, and by various State societies. All railroads generously furnished a large amount of transportation for these institutes. The meetings were well attended and successful throughout the State.

New Mexico College of Agriculture and Mechanic Arts.—One farmers' institute was held in November, 1899, at Aztec, in the northwestern part of the Territory. This was gotten up by the superintendent of the branch station at Aztec and largely conducted by the professor of agriculture. The frequent changes in the headship of the agricultural department of the college have conspired with the sparse population of the Territory and its great extent to prevent the college from doing much in the way of institute work. The principal railroads of the Territory have agreed to grant free transportation to the members of the staff when engaged on agricultural experiment station business, and it is believed that this concession of the railroads will enable the college to do more in the way of institute work and other extension work than ever before.

North Carolina College of Agriculture and Mechanic Arts.—Institutes have been conducted by the professors of agriculture and horticulture and by the instructors in animal industry and horticulture in conjunction with the State department of agriculture.

North Dakota Agricultural College.—The farmers' institute work in North Dakota is in charge of the assistant dairy commissioner, Prof. E. E. Kaufman, who is at the head of the department of dairying in the college. For the year ending June 30, 1900, 25 institutes were held, at which the attendance numbered 3,710. The director and members of the station staff were called upon to speak at the different institutes, and their work was of great practical value to the farmers of the State. The principal subjects discussed were: Crop rotation, maintaining the fertility of our soil, the cultivation of cereal crops, the selection of seed, the prevention of plant diseases, weeds and how to destroy them, the growing of forage crops, dairying, breeding and feeding live stock, relation of the agricultural college and experiment station to the industrial interests of the State.

Ohio State University.—The president and members of the faculty, during the past year, have participated in 54 farmers' institutes and delivered 54 lectures.

Oklahoma Agricultural and Mechanical College.—A persistent effort was made during the year to organize a system of farmers' institutes, but resulted in complete failure. But one institute was attended, and the attendance at this was very small. In the absence of some definite institute organization, so that meetings may be arranged in a circuit and attended without wasteful loss of time and expense, it appears that the institution must seek another way of doing this work. This it is doing, to a large extent, through correspondence and by attendance at the meetings of the different agricultural and live-stock associations which are held in the Territory. Three of these associations will hold their next meetings here, all of them beginning on the 4th day of December and continuing for several days.

Oregon State Agricultural College.—During the past year 12 farmers' institutes have been held under the auspices of the experiment station, with a total attendance of about 1,650 persons. In addition to regular institutes, seven special

lectures on dairying and diversified agriculture have been given, with a total attendance of about 700 persons.

Pennsylvania State College.—The farmers' institutes in the State are under the control of the State department of agriculture, but the college regularly furnishes the full time of three or four of its men as lecturers and instructors for a period of about three months. Two members of the board of trustees are also engaged in the same way.

Clemson Agricultural College (South Carolina).—During the past year farmers' institutes were held, under the management of the college, in many counties of the State. The president and professors of agriculture, chemistry, horticulture, dairying, veterinary science, botany, and other members of the faculty have taken part in these institutes. The purpose has been to bring practical information to the farmer, and to give him the results of scientific investigation in the interest of agriculture. The success thus far attained is most encouraging, and leads to the hope that these institutes may become a permanent feature in the work of the college. A special institute of ten days' duration is held at the college during the month of August.

Colored Normal, Industrial, Agricultural and Mechanical College (South Carolina).—Farmers' institutes were held by Thomas E. Miller, director of farm and lecturer on farming, and J. W. Hoffman, professor of agriculture, in 22 counties of the State.

South Dakota Agricultural College.—The last legislature appropriated \$2,000 for farmers' institutes, making possible the employment of some help outside the college faculty for a part of the year. There were held during the year 24 very successful institutes, with an average attendance of 100 people.

University of Tennessee.—During the year the university assisted the State commissioner of agriculture in holding institutes in different portions of the State. Institutes were held thus at about 20 different points, at each of which two or more of the professors and assistants were present and took part in the exercises. The interest in farmers' institutes continues to grow, and it is believed that they are doing great good in awakening farmers to study their business as a profession. The trustees and officers of the university are greatly gratified to report that the State is furnishing good support for these institutes.

Agricultural College of Utah.—During the past year, as required by State law, farmers' institutes have been held in different counties of the State by members of the faculty. The State provides a fund of \$1,500 annually for this purpose. In addition to the meetings held in different counties, a central institute was held at Ogden lasting three days, at which agricultural questions were discussed by members of the faculty and others. The proceedings of this central institute have been published in pamphlet form, and are distributed free among the farmers of the State.

University of Vermont and State Agricultural College.—Members of the faculty have attended meetings of the board of agriculture, and have given addresses in connection with these meetings and on other occasions.

Virginia Agricultural and Mechanical College.—Professors spoke at 3 institutes during the year.

Washington Agricultural College.—About 20 farmers' institutes were held during the year with an average attendance of about 100. The interest has been very great in this work and the demand beyond the ability of the institution to supply.

West Virginia University.—The dean of the college of agriculture has attended and spoken at a large number of farmers' institutes. Members of the experiment station staff have also spoken at institutes.

University of Wisconsin.—A carefully supervised system of farmers' institutes is maintained. The institutes are in immediate charge of a superintendent, who

elaborates and controls the organization and execution of the institutes. He is aided by special conductors, who assist in perfecting the details and carrying the whole into effect. Members of the agricultural faculty render as much assistance as is consistent with their other duties. Experts in different departments are engaged to present special important themes. Lecturers are often brought from other States to treat on specific topics in which they are recognized authorities. Local talent is used to some extent, and not the least of the educational benefits is the development of latent ability in writing, speaking, and experimenting, which has followed as a natural result of the interest awakened by this important stimulus. Institutes are placed for the most part in localities which show the greatest interest in this movement. Applications for institutes will be received by the superintendent and presented to the agricultural committee by September 30. The committee goes over the list and carefully considers the needs and interests of each locality and places the institutes where in its judgment they will prove the most helpful. Generally, there have been far more applications for institutes than it was possible to supply. Institutes were conducted during the year as follows: Summer, 1899: 12 one-day institutes and 1 three-day closing institute; winter, 1899-1900: 100 two-day institutes and 1 three-day round-up institute; 10 cooking schools of two sessions each were held in connection with the winter institutes.

GOVERNING BOARDS.

The methods of choosing the governing boards of the several institutions endowed by the acts of Congress of July 2, 1862, and August 30, 1890, vary greatly in the different States and Territories. In three States—Illinois, Nebraska, and Nevada—the governing boards are elected by popular vote. In several States they are elected by the State legislatures; several are self-perpetuating, but in a large majority of the States they are appointed by the governor, by and with the advice and consent of the senate. In the following pages are given, under the names of the several institutions, the titles of the governing boards, the *ex officio* members, the number of other members, by whom chosen, the length of term, and such other particulars as it has been possible to obtain.

Alabama Polytechnic Institute.—Board of trustees consisting of governor, State superintendent of education, *ex officio*; 1 member appointed by the governor for a term of six years from each Congressional district, except that the district in which the institution is located is entitled to two members.

Agricultural and Mechanical College for Negroes (Alabama).—Board of commissioners consisting of 3 members named in the act establishing the institution and who may fill any vacancy that may occur in the board.

University of Arizona.—Board of regents consisting of governor, State superintendent of public instruction, *ex officio*; 4 members appointed by the governor.

University of Arkansas.—Board of trustees consisting of governor, *ex officio*; 6 members appointed by the governor and confirmed by the senate for terms of six years, the terms of 2 members expiring every two years.

Branch Normal College (Arkansas).—Governed by board of trustees of University of Arkansas. (See above).

University of California.—Board of regents consisting of governor, lieutenant-governor, speaker of assembly, State superintendent of public instruction, president of State Agricultural Society, president of Mechanics' Institute, president of the university, *ex officio*; 16 members appointed by the governor and approved by the senate for terms of sixteen years.

Colorado Agricultural College.—State board of agriculture consisting of governor, president of the agricultural college, *ex officio*; 8 members appointed by the

governor and confirmed by the senate for term of eight years, the terms of 2 members expiring every two years.

Connecticut Agricultural College.—Board of trustees consisting of governor, director of Connecticut Experiment Station, ex officio; 6 members elected by the State senate for terms of four years; 1 member elected by the alumni; 1 member elected annually by the State board of agriculture.

Delaware College.—Board of trustees consisting of governor, president of Delaware College, ex officio; 15 members representing the original board who have power to fill all vacancies arising in their number; 15 members appointed by the governor, 5 from each of the 3 counties in the State.

State College for Colored Students (Delaware).—Board of trustees consisting of the president of the college, ex officio; 6 members, 2 from each county in the State, appointed by the governor for terms of four years or until their successors shall be appointed.

Florida State Agricultural College.—Board of trustees consisting of 7 members appointed by the governor and confirmed by the senate for terms of four years. Not more than two may be appointed from the county in which the college is located.

Florida State Normal and Industrial College for Colored Students.—State board of education consisting of governor, State superintendent of public instruction, secretary of State, attorney-general, State treasurer, ex officio.

Georgia State College of Agriculture and Mechanic Arts.—Board of trustees of University of Georgia consisting of governor, president of board of trustees of State School of Technology, president of board of commissioners of Georgia Normal and Industrial College, president of board of commissioners of Georgia Industrial College for Colored Youths, ex officio; 1 member from each Congressional district, 4 from the State at large, and 2 from the city of Athens appointed by the governor and confirmed by the senate.

Georgia State Industrial College for Colored Youths.—Under control of the board of trustees of the University of Georgia. The local board of commissioners consists of 5 members originally appointed by the governor. They have power to fill all vacancies arising in their number.

University of Idaho.—Board of regents consisting of 9 members appointed by the governor and confirmed by the senate for terms of six years.

University of Illinois.—Board of trustees consisting of governor, president of State board of agriculture, State superintendent of public instruction, ex officio; 9 members elected by popular vote, 3 at each biennial election, for a period of six years.

Purdue University (Indiana).—Board of trustees consisting of 9 members appointed by the governor for terms of four years. The State board of agriculture has the privilege of nominating 2 members and the State horticultural society 1 member.

Iowa State College of Agriculture and Mechanic Arts.—Board of trustees consisting of governor, State superintendent of public instruction, ex officio; 1 member from each Congressional district, elected by the State legislature for a term of six years.

Kansas State Agricultural College.—Board of regents consisting of the president of the college ex officio, and 6 members appointed by the governor and confirmed by the senate for terms of four years.

Agricultural and Mechanical College of Kentucky.—Board of trustees consisting of governor, president of the college, ex officio; 15 members appointed by the governor, one-third every two years, for terms of four years.

State Normal School for Colored Persons (Kentucky).—Board of trustees con-

sisting of State superintendent of public instruction ex officio; 3 members, residents of Franklin County, appointed by the governor and approved by the senate, for terms of three years.

Louisiana State University.—Board of supervisors consisting of governor, State superintendent of public education, president of university, ex officio; 12 members appointed by the governor and confirmed by the senate, 3 being appointed each year for terms of four years.

Southern University (Louisiana).—Board of trustees consisting of 12 members appointed by the governor and confirmed by the senate for terms of four years; at least 4 of the 12 shall be appointed from the colored race.

University of Maine.—Board of trustees consisting of 7 members appointed by the governor for terms of seven years; 1 member named by the alumni for a term of three years.

Maryland Agricultural College.—Board of trustees consisting of governor, comptroller of treasury, attorney-general, State treasurer, president of the senate, speaker of the house of delegates, ex officio; 1 member appointed by the governor from each Congressional district for a term of six years; 5 members elected by the stockholders and serving for one year or until their successors are elected.

Massachusetts Agricultural College.—Corporation consisting of governor, president of college, secretary of the board of education, secretary of the board of agriculture, ex officio; 14 members appointed by the governor, 2 annually, for terms of seven years. The alumni exercise the right of recommendation of candidates.

Massachusetts Institute of Technology.—Corporation consisting of governor, chief justice of supreme court, secretary of the board of education, ex officio; not more than 47 members to hold office for life and to be chosen by vote of the corporation by ballot.

Michigan State Agricultural College.—State board of agriculture consisting of governor, president of college, ex officio; 6 members appointed by the governor for terms of six years.

University of Minnesota.—Board of regents consisting of Hon. John S. Pillsbury, life member; governor, State superintendent of public instruction, president of university, ex officio; 9 members appointed by the governor and confirmed by the senate for terms of six years.

Mississippi Agricultural and Mechanical College.—Board of trustees consisting of governor, State superintendent of education, ex officio; 9 members appointed for terms of six years by the governor with the consent of the senate, 1 to be chosen from each Congressional district and the remainder from the State at large, 5 of whom shall be chosen from practical agriculturists or mechanics, or selected from both, as may be deemed advisable; one-third are appointed every two years.

Alcorn Agricultural and Mechanical College (Mississippi).—Board of trustees consisting of governor, State superintendent of education, ex officio; 9 members appointed for terms of six years by the governor with the consent of the senate, 1 to be chosen from each Congressional district and the remainder from the State at large, 5 of whom shall be chosen from practical agriculturists or mechanics, or selected from both, as may be deemed advisable; one-third are appointed every two years.

University of the State of Missouri.—Board of curators consisting of 9 members appointed by the governor and confirmed by the senate for terms of six years, one-third of the members being appointed every two years; not more than 1 can be appointed from the same Congressional district.

Lincoln Institute (Missouri).—Board of regents consisting of State superintendent of public schools ex officio; 6 members appointed by the governor, 2 every two

years, for terms of six years, who shall reside in the normal-school district for which they are appointed.

Montana College of Agriculture and Mechanic Arts.—The general control of the institution is in the hands of the State board of education, consisting of governor, attorney-general, State superintendent of public instruction, ex officio; 8 members appointed by the governor and confirmed by the senate, 2 each year, for terms of four years.

The direct supervision is vested in an executive board of 5 members, 1 of whom is appointed yearly by the governor, subject to the approval of the State board of education.

University of Nebraska.—Board of regents consisting of 6 members, one-third elected every two years for terms of six years by popular vote.

Nevada State University.—Board of regents consisting of 3 members elected by popular vote, the terms of 2 members expiring every two years. At each election 1 member is elected for a term of two years and the other for a term of four years.

New Hampshire College of Agriculture and Mechanic Arts.—Board of trustees consisting of governor, president of college, ex officio; 1 member elected by the alumni for a term of three years; 10 members appointed by the governor with the advice of the council, 1 at least from each councilor district and so classified and commissioned that the terms of 3 trustees shall become vacant annually. Not more than 5 of the trustees appointed by the governor and council shall belong to the same political party, and at least 7 of them shall be practical farmers.

Rutgers Scientific School (New Jersey).—Board of trustees of Rutgers College consisting of governor, chief justice, attorney-general, ex officio; 36 members, of whom two-thirds must be communicants in the Reformed (Dutch) Church.

Under supervision of a board of visitors consisting of 2 members from each Congressional district, appointed by the governor for a term of two years.

New Mexico College of Agriculture and Mechanic Arts.—Board of regents consisting of 5 members appointed by the governor and confirmed by the legislature for terms of five years, the term of 1 member expiring each year. The governor and Territorial superintendent of public instruction are ex officio advisory members of the board.

Cornell University (New York).—Board of trustees consisting of eldest male lineal descendant of Ezra Cornell, president of university, governor, lieutenant-governor, speaker of the assembly, State superintendent of public instruction, commissioner of agriculture, president of State Agricultural Society, librarian of Cornell library, ex officio; 20 members elected by the board, 4 each year, for terms of five years; 10 members elected by the alumni, 2 each year, for terms of five years.

North Carolina College of Agriculture and Mechanic Arts.—Board of trustees consisting of president of college ex officio; 21 members elected by the State legislature for terms of six years, 1 from each Congressional district and 12 from the State at large.

Agricultural and Mechanical College for the Colored Race (North Carolina).—Board of trustees consisting of 15 members elected by the State legislature for terms of six years, 1 from each Congressional district and 6 from the State at large.

North Dakota Agricultural College.—Board of trustees consisting of 7 members appointed by the governor and confirmed by the legislature for terms of six years.

Ohio State University.—Board of trustees consisting of 7 members appointed by the governor and confirmed by the senate for terms of seven years, the term of 1 member expiring each year.

Oklahoma Agricultural and Mechanical College.—Board of regents consisting of governor ex officio; 5 members appointed by the governor, with the approval of the council, for a term of two years or until their successors are appointed.

Colored Agricultural and Normal University (Oklahoma).—Board of regents consisting of Territorial superintendent of public instruction, Territorial treasurer, ex officio; 3 members appointed by the governor.

Oregon State Agricultural College.—Board of regents consisting of governor, secretary of state, State superintendent of public instruction, master of State grange, ex officio; 9 members appointed by the governor and confirmed by the senate for terms of nine years.

Pennsylvania State College.—Board of trustees consisting of governor, secretary of state, president of college, president of State Agricultural Society, secretary of internal affairs, adjutant-general, State superintendent of public instruction, president of Franklin Institute, secretary of State board of agriculture, ex officio; 3 members, 1 elected annually by the alumni; 12 members, 4 elected annually by a body of electors composed of the executive committee of the Pennsylvania State Agricultural Society, the managers of the Franklin Institute of Pennsylvania, 3 representatives duly chosen by each county agricultural society which shall have been organized at least three months preceding the time of election, and 3 representatives duly chosen by each association, not exceeding one in each county, which shall have for its principal object the promotion and encouragement of the mining and manufacturing interests of the Commonwealth and the mechanical and useful arts and which shall, in like manner, have been organized at least three months preceding the time of election.

Rhode Island College of Agriculture and Mechanic Arts.—Board of managers consisting of 5 members appointed by the governor.

Clemson College (South Carolina).—Board of trustees consisting of 7 life members originally designated by will who have the right to fill all vacancies happening in their number and 6 members elected by the State legislature.

Colored Normal, Industrial, Agricultural and Mechanical College (South Carolina).—Board of trustees consisting of governor ex officio; 6 members elected by the State legislature, 2 every two years, for terms of six years.

South Dakota Agricultural College.—Regents of education consisting of 5 members appointed by the governor and confirmed by the Senate for a term of six years. The immediate supervision of the college is delegated to a committee, consisting at present of 2 members.

University of Tennessee.—Board of trustees consisting of governor, secretary of state, State superintendent of public instruction, ex officio; 30 members elected by the board for life from the different Congressional districts and approved by the legislature. The president of the university is ex-officio president of the board of trustees.

Agricultural and Mechanical College of Texas.—Board of directors consisting of 8 members appointed by the governor from the different portions of the State for terms of six years.

Prairie View State Normal and Industrial College (Texas).—Controlled by the board of directors of the Agricultural and Mechanical College of Texas. (See above.)

Agricultural College of Utah.—Board of trustees consisting of 7 members appointed by the governor and confirmed by the senate for terms of four years.

University of Vermont and State Agricultural College.—Board of trustees consisting of governor, president of university, ex officio; 9 members who have the right to fill all vacancies arising in their number; 9 members elected by the State legislature, 3 every two years, for terms of six years.

Virginia Agricultural and Mechanical College and Polytechnic Institute.—Board of visitors consisting of State superintendent of public instruction ex officio; 8 members appointed by the governor and confirmed by the senate, 4 every two years, for terms of four years.

Hampton Normal and Agricultural Institute (Virginia).—Board of trustees,

self-perpetuating, consisting of 17 members. The State curators, 6 in number, appointed by the governor for a term of four years, attend the annual meetings of the trustees, examine the condition of the school, its finances, etc.

Washington Agricultural College.—Board of regents consisting of 5 members appointed by the governor and confirmed by the senate for terms of six years. The governor is ex officio an advisory member of the board.

West Virginia University.—Board of regents consisting of 9 members appointed by the governor for terms of six years.

West Virginia Colored Institute.—Board of regents consisting of 5 members, not more than 3 of whom shall belong to the same political party, appointed by the governor, from time to time, as the occasion may require.

University of Wisconsin.—Board of regents consisting of president of university, State superintendent of public instruction, ex officio; 1 member from each Congressional district, and 2 from the State at large, appointed by the governor for terms of three years.

University of Wyoming.—Board of trustees consisting of State superintendent of public instruction, president of university, ex officio; 9 members appointed by the governor and confirmed by the Senate for terms of six years, 3 being appointed every two years.

CHAPTER XXXVIII.

STATISTICS OF NORMAL SCHOOLS.

This chapter summarizes and gives in detail the statistics of public and private normal schools. A list is given of the universities and colleges having departments of pedagogy and those offering courses for the training of teachers. A table appears in the summaries giving the number of public and private high schools having teachers' training courses and the number of students pursuing such courses.

The public and private normal schools reported for the year 1899-1900 students in the training courses for teachers proper to the number of 69,593, while in all other institutions there were 28,749 students pursuing such courses of study, making a grand total of 98,342 normal students for the United States.

The 172 public normal schools had 2,171 instructors, 47,421 students, and 9,072 graduates, while the 134 private normal schools had 917 instructors, 22,172 students, and 2,321 graduates.

The following table will give some indication of the progress made by the public and private normal schools since 1890:

	1889-90.				1899-1900.			
	Schools.	Instructors.	Normal students.	Normal graduates.	Schools.	Instructors.	Normal students.	Normal graduates.
Public normal schools.....	135	1,182	26,917	4,413	172	2,171	47,421	9,072
Private normal schools.....	43	274	7,897	824	134	917	22,172	2,321
Total	278	1,456	34,814	5,237	306	3,088	69,593	11,393

The growth of public normal schools has been constant, while the progress of private normal schools has shown many variations. Since 1896-97 the number of private normal schools has fallen from 198 to 134. Some weaker institutions have ceased to exist, while others have become private secondary schools. The 134 remaining schools have become stronger, having reported 22,172 normal students for 1899-1900 as against the 21,293 reported by the 193 schools in 1896-97.

The steady growth of the public normal school is well illustrated by the following table, which shows the amounts of public appropriations received each year since 1890 for support and for buildings and improvements:

Public appropriations to public normal schools for 11 years.

Year.	For support.	For buildings.	Year.	For support.	For buildings.
1889-90.....	\$1,312,419	\$300,533	1895-96.....	\$2,187,875	\$1,124,834
1890-91.....	1,235,700	469,913	1896-97.....	2,426,185	743,933
1891-92.....	1,567,082	394,635	1897-98.....	2,563,132	417,866
1892-93.....	1,452,914	816,823	1898-99.....	2,510,934	560,896
1893-94.....	1,996,271	1,583,369	1899-1900.....	2,769,093	718,507
1894-95.....	1,917,375	1,003,933			

With two exceptions all the States and organized Territories have public normal schools. Nevada and Wyoming have no public normal schools, but their State universities have departments for the free education of teachers.

The number of students graduating from the normal courses of public and private normal schools in 1900 was 11,393. The normal graduates of other institutions were not reported to this office, but it may be estimated that the number of students graduating from the courses for the training of teachers in all the institutions, including the normal schools, was not less than 15,500.

The following table shows the number of institutions of each class and the number of normal students in each class for four scholastic years:

Normal students reported for four years.

Classes of institutions.	1896-97.		1897-98.		1898-99.		1899-1900.	
	Institu- tions.	Stu- dents.	Institu- tions.	Stu- dents.	Institu- tions.	Stu- dents.	Institu- tions.	Stu- dents.
Public normal schools.....	164	43,199	167	46,245	166	44,803	172	47,421
Private normal schools.....	198	24,181	178	21,293	165	23,572	134	22,172
Public universities and colleges..	30	1,839	23	2,255	29	2,541	26	2,004
Private universities and colleges..	166	4,650	188	6,065	206	6,950	221	7,520
Public high schools.....	507	9,001	494	7,378	544	8,930	506	10,703
Private high schools.....	422	7,064	326	5,989	378	6,886	417	8,522
Grand total.....	1,487	89,934	1,376	89,225	1,488	93,687	1,476	98,342
In all public institutions.....	701	51,039	624	55,878	739	53,279	704	60,128
In all private institutions.....	786	38,895	692	33,347	749	37,408	772	38,214

The 172 public normal schools had an average of 276 students to the school, and the 134 private normal schools an average of 135 to the school. The 26 public universities and colleges reporting normal students had an average of 77 to the institution, while 221 private universities and colleges had an average of nearly 34. The average number of normal students in 506 public high schools was 21 and the average number in 417 private high schools 20. These averages have reference only to students pursuing training courses for teachers. Students in other courses are enumerated elsewhere.

PUBLIC NORMAL SCHOOLS.

The summarized statistics of the 172 public normal schools will be found in Tables 1 to 8, while detailed information concerning the schools will be found in Table 19.

The number of public normal schools in each State is shown in the first column of Table 1. Twelve States and Territories support only 1 school each. Massachusetts has 10 schools, New York 16, and Pennsylvania 15. These three States have nearly one-fourth the public normal schools in the United States and more than one-third of the normal students. In the 172 schools there were 2,171 teachers employed in instructing students in normal departments and 744 engaged wholly in other departments. The North Atlantic Division had 915 of the teachers for normal students, the North Central Division 656, the two Southern divisions 200 and 202, and the Western Division 198. Of the 2,171 teachers, 935 are men and 1,236 are women.

Tables 2 and 3 summarize the enrollment of students in the public normal schools. Of the 47,421 students in the normal departments, there were 12,432 males and 34,989 females. The North Atlantic Division has 17,679 students, 14,679 of these being in Massachusetts, New York, and Pennsylvania. In the North Central Division the students in normal departments numbered 17,537, quite evenly distributed. The South Atlantic Division had 4,228, the South Central 4,092, and the Western Division 3,885. The public normal schools had 709

students in business courses, 2,955 in secondary grades equivalent to high school grades, and 20,406 pupils in elementary grades. The grand total, as shown in the first column of Table 3, was 71,491. The number of colored normal students included was 2,707, nearly all in the public normal schools for educating colored teachers in the Southern States.

Many of the public normal schools use their elementary departments as model schools, while some maintain no model schools of their own, but use for the same purpose the elementary grades in convenient public day schools.

Table 4 shows that in 1900 the number of teachers graduating from the public normal schools was 9,072, the number of male graduates being 1,851 and the number of female graduates 7,221. The North Atlantic Division alone had more than half of these graduates, or 4,924. The North Central Division had 2,033 graduates, the South Atlantic 687, the South Central 478, and the Western Division 950. These schools had 193 graduates from business courses and 651 from other courses.

The income of the public normal schools for each State is shown in Table 5. The appropriations from States, counties, and cities for support for the 144 schools reporting this item aggregated \$2,769,003. The total income for the year from appropriations, tuition fees, productive funds, and from other sources reported by 152 schools was \$3,749,750. Tuition fees received by 115 schools aggregated \$549,933, and the greater part of this sum must have been paid by students not in normal courses. The amount received from productive funds by 14 schools was \$69,425. It is probable that the \$361,389 reported by 47 schools as receipts from "other sources and unclassified" came directly or indirectly from public funds.

The value of buildings, grounds, and other property of 148 of the public normal schools reporting to this office in 1899-1900 was \$23,061,077. As shown in Table 6, the number of volumes reported in the libraries of 149 of these schools was 637,529, valued at \$734,995. Eight schools received during the year benefactions amounting to \$345,733. Twelve schools have endowments aggregating \$3,230,222. The aggregate of public appropriations for buildings and improvements received by 60 schools was \$718,507.

Table 7 shows the amount of public appropriations received each year for the last six years by the public normal schools for support, while Table 8 shows the public appropriations for buildings and improvements in the same period.

PRIVATE NORMAL SCHOOLS.

Table 9 shows that the 134 private normal schools had 917 teachers for normal students. The number of teachers wholly for other departments was 540.

Private normal schools are not reported from 18 States and Territories. Only 7 such schools are credited to the North Atlantic Division, where there are 59 public normal schools. In the North Central Division there are 61 private normal schools with 16,488 normal students, while the 48 public normal schools of that division have 17,537 normal students. The two Southern divisions have together 64 private normal schools with 4,609 normal students, while the 51 public normal schools of that section have 8,320 normal students.

From Table 10 it may be seen that 11,737 of the 22,172 normal students in the private normal schools were men and 10,435 were women. Of the total number 16,483, or about 74 per cent, are in the North Atlantic Division.

The total enrollment in the private normal schools was 45,193, including 5,948 in business courses, 6,615 in secondary grades, and 10,458 in elementary grades.

It is shown in Table 11 that there were 2,250 colored students in the normal departments, nearly all being in private normal schools for the colored race in the two Southern divisions.

The number of graduates from teachers' training courses was 2,321, as shown in Table 12, the number of men being 1,154 and the number of women 1,167. There were 1,067 graduates from business courses and 574 from other courses.

Table 13 shows that 20 private normal schools received State, county, or city aid aggregating \$17,120. The tuition fees of 80 schools amounted to \$472,747, while 13 schools received \$34,138 from productive funds. The aggregate income of 90 schools was \$768,599.

The value of grounds, buildings, and other property owned by 100 private normal schools was reported as \$5,099,223, and 24 schools possessed endowments to the value of \$2,676,456, as shown in Table 14. During the year 16 schools received benefactions amounting to \$487,789. The libraries of 104 schools had 170,834 volumes, valued at \$173,410.

DISTRIBUTION OF NORMAL STUDENTS.

It is shown in Table 15 that about 26 per cent of the normal students in public normal schools were men and nearly 74 per cent were women, while in the private normal schools 53 per cent were men and 47 per cent women. Nearly 20 per cent of the normal students attending public normal schools in 1899-1900 graduated, while in the private normal schools less than 11 per cent graduated.

The number of students pursuing teachers' training courses in universities and colleges, in public high schools, and in private high schools and academies is summarized by States in Table 16. Table 17 is a summary of all the students in the five classes of institutions reported to this office as pursuing normal or teachers' training courses in 1899-1900.

Table 18 contains a list of the universities and colleges in which courses designed for the professional training of teachers are maintained. The number of normal students for each year for the past six years is given. Institutions which are public are so designated.

CHAPTER XXXIX.

STATISTICS OF SECONDARY SCHOOLS.

The total number of secondary students in institutions of all classes reporting to this Office for the scholastic year ending June, 1900, was 719,241, or more than 4 per cent of the aggregate enrollment in all the schools and colleges of the United States which was 17,020,710. There was a gain of 64,014, or nearly 10 per cent, over the preceding year in the number of secondary students enrolled. The secondary students enumerated were distributed among eight classes of institutions as follows:

Institutions.	Male.	Female.	Total.
Public high schools	216,207	303,044	519,251
Public normal schools	1,049	1,906	2,955
Public universities and colleges	6,132	2,087	8,219
Private high schools	55,734	55,063	110,797
Private normal schools	3,817	2,728	6,545
Private universities and colleges	23,082	19,384	42,466
Private colleges for women		13,817	13,817
Manual training schools	5,588	3,833	9,421
Total	317,509	402,032	719,241

The enrollment of secondary students for the year 1899-1900 was almost 1 per cent of the total population, or 9,460 in every million of population. The number reported as enrolled is something less than the actual number of secondary students in the United States. In localities in most of the States where high schools are not accessible there are many students pursuing secondary studies under the direction of teachers of the elementary schools. The 91,549 students in commercial schools are not here included.

Since 1890 the rate of increase of secondary students has been more rapid than the rate of increase in population. The number of secondary students in private institutions has about kept pace with the growth of population from year to year, while the number of such students in public institutions has increased from about 3,600 to the million in 1890 to over 7,000 to the million in 1900. The following table shows the remarkable growth in the number of secondary students in the past ten years:

Secondary students and per cent of population.

Year.	In public institutions.		In private institutions.		In both classes.	
	Secondary students.	Per cent of population.	Secondary students.	Per cent of population.	Secondary students.	Per cent of population.
1889-90	221,522	0.36	145,481	0.23	367,003	0.59
1890-91	222,868	.35	147,567	.23	370,435	.55
1891-92	247,660	.38	154,429	.24	402,089	.62
1892-93	256,628	.39	153,792	.23	410,420	.62
1893-94	302,006	.45	178,352	.26	480,358	.71
1894-95	361,370	.53	178,342	.26	539,712	.79
1895-96	392,729	.56	166,274	.23	559,003	.79
1896-97	420,459	.59	161,445	.23	584,904	.82
1897-98	459,813	.63	166,302	.23	626,115	.86
1898-99	488,549	.66	163,678	.23	652,227	.89
1899-1900	530,425	.70	188,816	.25	719,241	.95

The aggregate number of secondary students increased from 367,003 in 1889-90 to 719,241 in 1899-1900, or nearly 96 per cent. The increase in the number of such students in public institutions was from 221,522 in 1889-90 to 530,425 in 1899-1900, or over 139 per cent, while the increase in the number of secondary students in private institutions was from 145,481 in 1889-90 to 188,816 in 1899-1900, or nearly 30 per cent. These figures for the United States and corresponding figures for each geographical division are given in the following table:

Students receiving secondary instruction in public and private high schools and academies and in preparatory departments of colleges and other institutions.

	1889-90.			1899-1900.			Per cent of increase.		
	Public.	Private.	Total.	Public.	Private.	Total.	Public.	Private.	Total.

a Decrease.

The growth of secondary education is further indicated by the increase in the value of property owned by public and private high schools. In 1890 property to the value of \$49,171,542 was reported by 2,257 of the 2,526 public high schools, while 1,334 of the 1,632 private high schools and academies reported property to the value of \$37,521,576, making an aggregate of \$86,693,118 for the value of property owned by both classes of schools. In 1900 property to the value of \$96,131,695 was reported by 4,742 of the 6,005 public high schools, while 1,390 of the 1,978 private high schools and academies reported property to the value of \$53,854,136, making an aggregate of \$149,985,136 for the value of property owned by both classes. This was an increase of \$63,292,713 in ten years.

It has been found impracticable to collect complete statistics of secondary students in the preparatory departments of colleges and other institutions, such as the number of students pursuing certain studies, and certain other details. For this reason this chapter is devoted almost exclusively to the statistics of the 6,005 public high schools and the 1,978 private high schools, academies, and seminaries reporting directly to this Bureau for the year 1899-1900. The following table shows the remarkable growth of public and private high schools since 1889-90:

Year reported.	Public.			Private.			Total.		
	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.

In 1889-90 there were 2,526 public high schools with 502,963 students, while in 1899-1900 the number of schools had increased to 6,005 and the number of students to 519,351. This was an increase of nearly 138 per cent in the number of schools and nearly 156 per cent in the number of secondary students. Up to the middle of the decade there was an increase in the number of private high schools and academies, but after 1895 there was a small decrease annually until 1899-1900, when there was a small increase over the preceding year and a considerable increase in the number of secondary students in these private institutions. In 1889-90 the public high schools had about 68 per cent of the number of students and the private high schools about 32 per cent, while in 1899-1900 the former had over 82 per cent and the latter less than 18 per cent of the secondary students. The relative progress of public and private high schools since 1889-90 is shown in the following table, which gives the proportion of the number of schools, teachers, and students of the two classes:

Year reported.	Per cent of number of schools.		Per cent of number of teachers.		Per cent of number of students.	
	Public.	Private.	Public.	Private.	Public.	Private.
1889-90	60.75	39.25	55.85	44.15	68.13	31.87
1890-91	61.78	38.22	57.03	42.97	68.26	31.74
1891-92	66.19	33.81	57.42	42.58	70.40	29.60
1892-93	66.23	33.77	60.25	39.75	70.78	29.22
1893-94	66.67	33.33	60.21	39.79	70.91	29.09
1894-95	68.37	31.63	62.26	37.74	74.74	25.26
1895-96	70.25	29.75	64.21	35.79	78.11	21.89

1897-98	72.76	27.24	65.72	34.28	81.03	18.97
1898-99	73.74	26.26	66.55	33.45	82.10	17.90
1899-1900	75.22	24.78	66.82	33.18	82.41	17.59

PUBLIC HIGH SCHOOLS.

Tables 1 to 15 in this chapter summarize the statistics of the public high schools reporting to this Office, while the information concerning each school is given in detail in Table 42.

For the scholastic year 1899-1900 there were 6,005 public high schools reporting to this Office, a gain of 510 over the preceding year. The number of these schools reported as departments of public systems was 5,738, while only 268 were reported as independent. These are generally outside the cities or villages. Of the number belonging to city or village systems 691 are in cities which have 8,000 population or over.

As shown in Table 1, there were 20,372 teachers instructing secondary students in the public high schools, the number of men being 10,172 and the number of women 10,200. This was an increase of 1,654 in the number of teachers over the preceding year. It is shown in the same table that the public high schools had 519,351 secondary students, 216,207 males and 303,044 females, a gain of 43,034 in the total number. The male students comprised 41.64 per cent of the whole number, and the female students 58.36 per cent.

Of the total number of students in the public high schools of the United States, 254,816, or nearly 50 per cent, are found in the 3,163 schools of the North Central Division. The 1,448 public high schools of the North Atlantic Division had 169,405 secondary students, the 675 schools of the South Central had 39,669, the 449 schools of the South Atlantic had 27,013, and the 270 schools of the Western Division had 28,348 secondary students.

In the total number of students reported, there were included 8,395 colored secondary students. Of this number only 4,393 were in the colored high schools of the two Southern divisions, while the other divisions had 4,002. In the colored high schools of Missouri, a former slave State, there were 632 secondary students. If this number be subtracted from the North Central Division and added to the total in the two Southern divisions the number would be 5,075 for the Southern and 3,320 for the other sections of the United States.

STUDENTS AND COURSES OF STUDY.

The number of secondary students in classical and scientific courses known to be preparing for college, the number of graduates in 1900, the number of college preparatory students in the graduating classes, and the number of public high-school students in military drill, are shown in Table 2. The number preparing for college was 56,202, or 10.82 per cent of the whole number. The number of graduates was 61,737, or 11.89 per cent of the total enrollment. The number of graduates prepared for college was 18,693, or 30.28 per cent of the total number of graduates for the year. The number of students in military drill was 10,455, an increase of only 59 over the preceding year.

The table which follows is a synopsis of the summaries exhibited in tables 2 to 11. The per cent of male students preparing for college was 13.44, and the per cent of female students 8.95. Over 10 per cent of the male students enrolled and nearly 13 per cent of the female students graduated in 1900. The per cent of male graduates who had prepared for college was 33.06, and the per cent of female graduates 25.79.

Students in certain courses and studies in public high schools.

a Per cent of number of graduates.

The above table shows that there were 332,767 public high-school students studying Latin, or 50.61 per cent of the whole number. It may be noted that a greater proportion of female than of male students were studying Latin. There were 101,894, or 47.13 per cent, of the male students and 160,873, or 53.09 per cent, of the female students in Latin. Only 3.70 per cent of the male students and 2.25 per cent of the female students were studying Greek. The per cent of male students studying algebra was 57.04, and the per cent of female students in the same study was 55.76. The total number studying algebra was 292,287, or more than 56 per cent of the total public high-school enrollment. The numbers and percentages of the other leading high-school studies are given in the above table for the United States, and for the States in detail in Tables 3 to 11.

As shown in Table 3, Latin was taught in 5,154 of the 6,005 public high schools. This was an increase of 448 in the number of schools in which Latin was taught.

The number of students was 23,736 more than the preceding year.

The per cent of students in each of the leading high-school studies reported annually for the past eleven years is given in the table which follows. It will be noted that the per cent of students in Latin has increased from 34.69 in 1889-90 to 50.61 in 1899-1900. In the same period the per cent in algebra increased from 45.40 to 56.29, the per cent in German from 10.51 to 14.33, and the per cent in general history from 27.31 to 38.16. The proportion of students in Greek, which had remained at a fraction above 3 per cent for ten years, fell to 2.85 per cent in 1899-1900.

Per cent of total number of secondary students in public high schools in certain courses and studies, etc.

a Per cent of total number of graduates.

The actual number of students reported as preparing for college has greatly increased each year, but there has been a falling off in the percentage in the last ten years. In 1889-90 the per cent of public high-school students preparing for college was 14.44, and in 1899-1900 only 10.82.

Tables 12, 13, and 14 compare the statistics of public high schools in cities and outside of cities. In cities of 8,000 population and over there were 691 public high schools, with 7,874 instructors and 235,139 students. Outside of these cities there were 5,314 public high schools, with 12,498 instructors and 284,112 students. In the cities the high schools had an average of 340 students to the school, while the average outside of the cities was 54 students to a school.

EQUIPMENT AND INCOME.

The equipment and income of the public high schools in each State may be found summarized in Table 15, so far as the items were reported to this Office. The number of volumes in the libraries of 4,899 schools was 2,727,003; the value of grounds, buildings, scientific apparatus, etc., owned by 4,742 schools was \$96,131,695. Owing to the fact that in most cases separate accounts are not kept of the proportion of public appropriations used by the high schools, only 2,067 of these schools were able to report the amounts of State or municipal aid received. The aggregate of these amounts was \$5,545,246. The aggregate received from tuition by 1,688 schools was \$337,576. The amount received by 782 schools from sources reported as unclassified was \$1,337,420. Nearly all of the latter item should be credited to State, county, or city appropriations. The total income of 2,280 schools reporting this item was \$7,561,121.

PRIVATE HIGH SCHOOLS AND ACADEMIES.

Tables 16 to 29 summarize the statistics of private high schools, academies, and seminaries. Tables 16 to 26 are similar in form to Tables 1 to 11, relating to public high schools, and the two series may be compared. Tables 27 and 15 may also be compared. Table 30 is a comparative showing of the average number of teachers and students in public and private high schools.

For the year 1899-1900 there were 1,978 private secondary schools reporting to this Office, or 21 more than the number reporting the previous year. These schools had 10,117 teachers for secondary students, an increase of 707, and 110,797 secondary students, an increase of 6,959. The total number of private secondary students included 2,390 colored students—2,125 in private colored schools in the two southern divisions, and 265 in the other divisions. The 1,978 schools reported 126,886 in the elementary grades.

STUDENTS AND COURSES OF STUDY.

In the private secondary schools there were 35,315 students preparing for college, or nearly 32 per cent of the number enrolled. As shown in Table 17, the number of these college preparatory students preparing for the classical course was 21,126, and the number preparing for scientific courses 14,189. The number of graduates in 1900 was 12,216, or more than 11 per cent of the secondary students enrolled. In the classes that graduated there were 5,673 students prepared for college, or over 46 per cent of the graduates. There were 8,900 students in military drill, an increase of 441 over the preceding year.

The number of students in each of 18 high-school studies in each State will be found in Tables 18 to 23, while the percentages of students in these studies are shown in Tables 24, 25, and 26. The following table gives a synopsis of the number and per cent of students, by sex, in college preparatory courses, and in the leading high-school studies in private secondary schools in 1899-1900:

Students in certain courses and studies in private high schools and academies.

Courses, studies, etc.	Number of students.	Per cent of total number.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.

a Per cent of total number of graduates.

An interesting comparison may be made with the above table and a similar synopsis on a preceding page relating to public high schools. It is shown that nearly 32 per cent of the private high-school students were preparing for college, while less than 11 per cent of the public high-school students were making such preparation. In both the public and private high schools over 50 per cent studied Latin. The per cent studying algebra in the private high schools was 49.40 and in the public high schools 56.29.

The following table shows the progress made by the private high schools and academies in the past ten years as indicated in the increased percentages of students in certain courses and studies:

Per cent of total number secondary students in private high schools and academies in certain courses and studies.

									15.74	15.95	18.41

The above table shows that in the private secondary schools the per cent of graduates has increased from 8.50 in 1890 to 11.02 in 1900, while the proportion of graduates prepared for colleges has decreased from 61.37 per cent in 1891 to 46.52 per cent in 1900. As in the case of public high schools, there has been a marked increase in the number of students in certain studies. The per cent studying Latin increased from 31.32 in 1889-90 to 46.92 in 1899-1900, and the per cent in algebra from 37.12 in 1889-90 to 49.40 in 1899-1900. In the public high schools it has been noted that about 3 per cent of the students reported each year for ten years have been studying Greek. In the private high schools the percentage increased from 7.03 in 1889-90 to 9.77 in 1899-1900.

EQUIPMENT AND INCOME.

Table 27 exhibits the equipment, income, benefactions, value of endowment, etc., of the private secondary schools. The number of volumes in the libraries of 1,372 of these schools was 1,784,026. The value of buildings, grounds, scientific apparatus, etc., owned by 1,390 schools was \$33,854,136. The amount of aid from public funds received by 272 of these schools was \$155,874. The tuition fees of 1,207 schools aggregated \$6,061,285, while 302 schools derived \$1,660,640 from productive funds. Receipts from sources not named amounted to \$1,238,206 for 478 schools. The aggregate income of 1,281 schools was \$9,079,805. During the year 178 schools received benefactions amounting to \$913,832. The total money value of the endowments of 361 schools is reported as \$29,751,577.

DENOMINATIONAL SCHOOLS.

Of the 1,978 private secondary schools reported, 945 are controlled by religious denominations. In these denominational schools there were 5,074 instructors and 53,624 secondary students, as against 5,043 instructors and 57,173 students in the 1,033 nonsectarian schools. In Table 43, which gives in detail the statistics of private secondary schools, the name of the religious denomination controlling each school is given in column 4. Tables 28 and 29 show the number of schools in each State controlled by each religious denomination. The following synopsis is made from these tables:

Religious denomination and nonsectarian.	Schools.	Instructors.	Students.
Nonsectarian	1,033	5,043	57,173
Roman Catholic	361	1,910	15,872
Episcopal	98	714	5,145
Baptist	96	529	7,173
Presbyterian	93	402	4,574
Methodist	65	324	5,522
Friends	55	296	3,428
Congregational	51	242	2,671
Methodist Episcopal South	38	154	2,863
Lutheran	32	175	2,032
Other denominations	56	328	4,344
Total	1,978	10,117	110,797

PUBLIC AND PRIVATE SECONDARY SCHOOLS.

The statistical summaries of public and private secondary schools are combined in Tables 31 to 38. Table 30 presents a comparison of certain statistics. It is shown that in the public high schools there are about 87 students to a school and 26 students to a teacher, while in the private schools there are 56 students to a school and only 11 secondary students to a teacher. Table 31 shows that the 7,983 public and private secondary schools had 50,489 teachers and 630,048 students. Nearly 57 per cent, or 358,107, of these students were females. The number of students preparing for college was 91,517, or nearly 15 per cent of the total secondary enrollment. The graduates for 1900 numbered 73,953, or nearly 12 per cent of the number enrolled for the year. The number of graduates who had prepared for college was 24,366, or nearly 33 per cent of the total number of graduates.

Tables 33 to 38 give the number and per cent of students in each of the 18 leading high-school studies in each State. The following synopsis shows the number of male and female students in certain courses and studies for the United States in 1899-1900:

Students in certain courses and studies in public and private high schools and academies.

a Per cent of number of graduates.

For several years attention has been directed to the steady increase of the number of students in Latin. In 1889-90 there were 100,152 students in public and private high schools studying Latin. This was 33.62 per cent of the total. In 1899-1900 the number had increased to 314,856, or about 50 per cent of the total number of secondary students in these schools. There has been but little variation in the percentage of students in Greek, the highest for any year being 4.99 and the lowest 4.27, until 1899-1900 when the percentage fell to 3.95. There has been a small increase in the percentage in French. The number studying German increased from 11.48 in 1889-90 to 15.06 in 1899-1900. In the ten years the per cent of students in algebra increased from 42.77 to 55.08, and the per cent in geometry increased from 20.07 to 26.75. The percentage of students in general

history increased from 27.83 in 1889-90 to 37.80 in 1899-1900. The following synopsis exhibits these percentages for each of the eleven years:

Per cent of the total number of secondary students in public and private high schools and academies in certain courses and studies, etc.

Students and studies.	1889-90	1890-91	1891-92	1892-93	1893-94	1894-95	1895-96	1896-97	1897-98	1898-99	1899-1900.

a Per cent of total number of graduates.

DISTRIBUTION OF SECONDARY STUDENTS.

Tables 39 and 40 show the distribution of secondary students enrolled in 1899-1900 in the eight classes of institutions mentioned on the first page of this chapter. It is shown that of the 719,241 secondary students reported to this Bureau for the scholastic year, 530,425 were in public institutions and 188,816 were in private institutions. In the public institutions 519,251 were in public high schools, 8,219 in preparatory departments of public universities and colleges, and 2,955 in public normal schools. In the private institutions 110,797 were in private high schools and academies, 48,066 in preparatory departments of private universities and colleges, 6,615 in private normal schools, and 9,521 in manual training schools.

Table 41 shows that the number of secondary students to each 1,000 of population in the United States was 9.46.

The same table shows that the number of students in higher education was 155,667, or an average of 2.05 to the 1,000 of population. This number includes all students who in 1899-1900 were receiving higher instruction in colleges, resident graduate students in universities and colleges, and all professional students in theology, medicine, and law. The independent professional schools are included, as well as those classed as departments of universities and colleges. Students of normal schools and schools of dentistry, veterinary surgery, pharmacy, and nurse training are not here included.

Tables 42 and 43 give in detail the statistics of the 7,983 public and private high

schools reporting to this Bureau in 1899-1900. Table 44 shows the number of public and private high schools for boys only, for girls only, and the number of coeducational secondary schools in each State.

CHAPTER XL.

MANUAL AND INDUSTRIAL TRAINING.

References to recent Reports of the United States Commissioner of Education, in which this subject has been treated or statistics published: Annual Report for 1888-89, pages 411-423, 1362-1367; 1889-90, pages 1148, 1209-1212, 1351-1356; 1891-92, page 1197; 1892-93, pages 186-188, 569-575; 1893-94, pages 877-949, 2063-2169; 1894-95, page 2170; 1895-96, pages 989-992, 1001-1152, 1321-1329, 1510-1521 (column 8); 1896-97, pages 193-197, 699-703, 2211-2222 (column 8), 2279-2294; 1897-98, pages 141, 194, 723, 2370-2382 (column 8), 2419-2440; 1898-99, pages 26, 83, 179-189, 208-209, 853-863, 1355-1361, 1442, 1448, 1525-1536 (column 8), 2139-2162.

There is a steady increase from year to year in the enrollment in the schools especially devoted to manual and industrial training. The number of such schools reporting to this Office for the year 1899-1900 was 144, an increase of 19 over the preceding year. The different pupils receiving manual or industrial training in these schools was 41,736, an increase of 3,115 in one year.

The 144 schools, including 32 industrial schools for Indian children, had 1,199 teachers in the manual and industrial training departments—612 men and 587 women—as shown in Table 3. The number of boys receiving manual training was 25,754, an increase of 2,752, and the number of girls 15,982, an increase of 363.

The total expenditure for manual training by 106 of the 144 schools was \$766,121. Of the aggregate of expenditure for 1899-1900 the sum of \$573,784 was paid teachers, \$94,405 for material, \$42,862 for new tools and repairs, and \$55,070 for incidentals and for items not classified.

The statistics in detail for the 112 manual and industrial training schools other than Indian schools will be found in Table 4. In these 112 schools there were employed 871 teachers—479 men and 392 women. In the same schools there were 35,191 pupils—2,193 boys and 13,261 girls.

Table 5 gives in detail the statistics of the 32 Indian schools. There were 328 teachers employed in these schools—133 men and 195 women. The number of pupils was 6,545, the number of boys being 3,824 and girls 2,721.

The branches of manual training or the trades taught and the number of pupils in each branch, so far as reported by the individual schools mentioned in Tables 4 and 5, are shown in Table 6.

This Office did not attempt to ascertain the number of pupils receiving manual or industrial training in 1899-1900 in institutions not distinctively manual or industrial training schools. General statistics of this character were collected in 1893-94 and printed in the Report of this Office for that year, pages 2093 to 2169.

Table 1, on the next page, shows the number of cities of 8,000 population and over in whose public schools manual training has been given in the last ten years. In 1890 it was given in 37 cities, in 1894 in 95 cities, in 1896 in 121 cities, in 1898 in 146 cities, and in 1900 in 169 cities.

Table 2 gives a list of the 169 cities in whose public schools manual training (other than drawing) was given in 1899-1900, and indicates the grades in each city system in which such instruction was given.

CHAPTER XLI.

COMMERCIAL AND BUSINESS SCHOOLS.

In the last five years prominent business men of the country, as well as many leading educators, have manifested an increasing interest in the subject of business training, particularly in higher commercial education. Several universities now have departments of commerce, and many colleges offer business courses leading to degrees, while hundreds of public and private high schools have commercial courses parallel with the regular high-school courses. Many of the business and commercial schools have also extended and improved their courses of study. The progress of this movement was noted at some length in the Report of the Commissioner of Education for 1897-98, pages 2441-2461. The Report for 1898-99 published the recommendations of the committee of the department of business education of the National Educational Association on a course of study for commercial colleges, pages 2163-2174. In a preceding chapter of this Report (Chap. XXXV, pp. 1861-1871), under the head of "Higher commercial education," there are given synopses of commercial courses offered by a number of universities and colleges.

There are in the United States 4,393 institutions of various grades in which there were 186,048 students reported as pursuing commercial or business studies in the scholastic year 1899-1900. The number of each class of institution and the number of business and commercial students in each of the five classes may be seen from the following summary:

Class of institution.	Number of schools.	Males.	Females.	Total.
Universities and colleges	183	6,212	1,741	7,953
Public and private normal schools	75	4,564	2,003	6,567
Private high schools and academies	869	9,911	5,738	15,649
Public high schools	2,893	33,133	35,757	68,890
Commercial and business schools	373	58,396	33,153	91,549
Total	4,393	112,216	78,482	190,698

Since 1889-90 the number of students pursuing business studies in commercial schools and other institutions has been subject to great fluctuation from year to year. Business depressions and reverses almost instantly affect this class of schools. In 1890 there were reported to this Office 103,914 students in commercial studies. There was a steady and rapid increase up to 1893-94, when the number reached 150,505. Then there was a decline until 1897-98, when the number was only 123,913. The next year there was an increase to 131,518, and in 1899-1900 the number was 190,698, a phenomenal increase of 59,180 in one year.

The following table is an exhibit of the number of students reported in commercial studies for each year from 1889-90 to 1899-1900:

Students pursuing commercial studies.

Scholastic year.	In institutions not distinctly business schools.					In commercial and business schools.	Aggregate of students in commercial studies.
	Universities and colleges.	Normal schools.	Private high schools and academies.	Public high schools.	Total.		
1889-90.....					24,994	78,920	103,914
1890-91.....					36,564	81,898	118,462
1891-92.....					27,254	77,856	105,110
1892-93.....					30,892	99,654	130,546
1893-94.....	7,300	7,771	4,466	15,220	34,757	115,748	150,505
1894-95.....	4,577	5,293	8,819	25,539	44,228	96,135	140,363
1895-96.....	5,678	5,375	9,889	30,330	51,272	80,662	131,934
1896-97.....	5,056	6,297	11,574	33,075	56,002	77,746	123,748
1897-98.....	5,869	5,721	9,740	31,633	52,963	70,950	123,913
1898-99.....	6,468	6,126	10,609	38,134	61,332	70,186	131,518
1899-1900.....	7,953	6,657	15,649	68,890	99,149	91,549	190,698

The above table indicates the progress made by high schools and colleges in meeting the demand for commercial education in this country. In 1889-90 these institutions had less than 25 per cent of the students in business studies, while in 1899-1900 they had almost 52 per cent. While the number of students in business and commercial schools advanced from 70,186 in 1898-99 to 91,549 in 1899-1900, an increase of 21,363, the number in all other institutions increased 37,817, from 61,332 in 1898-99 to 99,149 in 1899-1900. The public high schools alone furnished 30,753 of this remarkable increase. In private high schools and academies the increase was 5,040, in normal schools 531, and in universities and colleges 1,490. It would seem that the public high school of the near future is to meet the greater part of the demand for instruction in the lower commercial studies, such as business arithmetic, bookkeeping, stenography, commercial geography, and commercial law. It was ascertained by this Office in 1893-94 that there were 15,220 students in the public high schools pursuing some of these studies. In 1899-1900 the number had reached 68,890, an increase of over 342 per cent in six years. In 1893-94 the business and commercial schools reached the high-water mark when they reported 115,748 students. The lowest point reached was in 1898-99, when they reported 70,186 students; the 91,549 reported in 1899-1900 shows a phenomenal increase in one year, but the number is still 24,199 less than the number reported six years before.

Table 1 gives the number of institutions of all grades in each State and Territory in which business and commercial studies were taught and the number of students in such studies in 1899-1900.

Table 2 gives the number of commercial students in universities and colleges in each State. The same table shows the number of such students in public and private normal schools in each State.

Table 3 summarizes by States the number of business and commercial students in private high schools and academies. The number of such students in the public high schools in each State is given in the same table.

Table 4 is the first of a series of three tables summarizing the statistics of the 373 commercial and business schools reported to this Office for 1899-1900. These schools employed 2,112 instructors—1,413 men and 699 women. Of the 91,549 students enrolled, 58,896 were males and 33,153 females. Many of these institutions have both day and evening schools. The number of students enrolled in the day schools was 70,978, the number of males being 44,456, females 26,522. The num-

ber of students in the evening schools of these institutions and not attending any of the day schools was 16,094, the number of males being 11,137, females 4,957, as shown in Table 5. A number of the schools reported only total enrollment, without dividing day and evening attendance.

Table 5 shows that the 373 commercial and business schools had had 11,936 graduates from commercial courses and 11,356 graduates from amanuensis courses during the year 1899-1900.

The number of students in each of four courses of study in each State, as reported by the 373 business and commercial schools, is shown in Table 6. The number of students in each course is summarized as follows:

	Male.	Female.	Total.
Commercial course	37,538	12,844	50,382
Amanuensis course	14,451	20,054	34,505
English course	9,439	4,053	13,492
Course in telegraphy	1,633	286	1,919
Total	62,461	37,237	99,698

In many of the schools several thousand students were pursuing more than one course of study, which accounts for the fact that the total in the above table exceeds the total enrollment.

Tables 7 and 8 show the number of students in certain business studies in the public high schools in each State and Territory. The number of public high schools maintaining regular business courses was 505, with 21,253 students in such courses. In 2,913 schools there were 63,890 students in bookkeeping; in 451 schools, 13,235 students in commercial geography, and in 437 schools, 9,326 students in commercial law. In 11 States there were 990 students in Spanish, not shown in these tables.

Table 9 fills the remainder of this chapter, giving in detail the statistics of the 373 business and commercial schools.

CHAPTER XLII.

EDUCATION OF THE COLORED RACE.

References to preceding Reports of the United States Bureau of Education in which this subject has been treated: In Annual Reports—1870, pp. 61, 337-339; 1871, pp. 6, 7, 61-70; 1872, pp. xvii, xviii; 1873, p. lxvi; 1875, p. xxiii; 1876, p. xvi; 1877, pp. xxxiii-xxxviii; 1878, pp. xxviii-xxxiv; 1879, pp. xxxix-xlv; 1880, p. lviii; 1881, p. lxxxii; 1882-83, pp. xlviii-lvi, 85; 1883-84, p. liv; 1884-85, p. lxvii; 1885-86, pp. 596, 650-656; 1886-87, pp. 790, 874-881; 1887-88, pp. 20, 21, 167, 169, 988-998; 1888-89, pp. 768, 1412-1439; 1889-90, pp. 620, 621, 624, 634, 1073-1102, 1388-1392, 1395-1485; 1890-91, pp. 620, 624, 792, 803, 915, 961-980, 1469; 1891-92, pp. 8, 686, 688, 713, 861-867, 1002, 1234-1267; 1892-93, pp. 15, 442, 1551-1572, 1976; 1893-94, pp. 1019-1051; 1894-95, pp. 1331-1424; 1895-96, pp. 2061, 2115; 1896-97, pp. 2295-2333; 1897-98, pp. 2479-2507; 1898-99, pp. 2201-2225; Introduction to Annual Report for 1898-99, pp. lxxxviii-xcii; also in Circulars of Information—No. 3, 1883, p. 63; No. 2, 1886, pp. 123-123; No. 3, 1888, p. 122; No. 5, 1888, pp. 53, 54, 59, 60, 80-88; No. 1, 1892, p. 71. Special Report on District of Columbia for 1869, pp. 193, 300, 351-400. Special report, New Orleans Exposition, 1884-85, pp. 468-470, 775-781.

The estimated number of children in the South (the 16 former slave States and the District of Columbia) between 5 and 18 years of age for the scholastic year 1899-1900 was 9,094,490. Of this number 6,103,390, or 67.15 per cent, were white and 2,991,100, or 32.85 per cent, were colored, as shown in the first part of Table 1. The same table shows that the enrollment in the white public schools was 4,167,489, or 68.28 per cent of the white school population, while the enrollment in the colored public schools was 1,539,507, or 51.46 per cent of the colored school population. The average daily attendance in the white schools was 2,711,701, or 65.06 per cent of the white enrollment, and the average daily attendance in the negro schools was 957,160, or 62.17 per cent of the colored enrollment.

It is shown in Table 2 that the total expenditure for the public schools of the South for the year 1899-1900 was \$35,594,071. It is estimated that about 20 per cent of this sum, or \$7,118,814, was expended in support of the negro public schools.

The table shows the expenditure for both races for each year since 1870-71, the aggregate for the 30 years being \$615,103,948. During the first part of the period the colored schools did not receive as large a share as 20 per cent of the whole, but it is estimated that the South has expended for the education of the colored race in the public schools about \$109,000,000. It is impossible to obtain an accurate statement as to the amounts separately expended for the education of the negroes, for the reason that in twelve of the Southern States separate accounts are not kept. In Maryland the expenditure for negro schools is known for each of the 30 years. In North Carolina separate accounts have been kept since 1873, in the District of Columbia since 1875, in Kentucky since 1880, and in Florida since 1893. These statistics were given in the Report of the Commissioner of Education for 1898-99, pages lxxxviii-xcii.

PUBLIC HIGH SCHOOLS.

Tables 3 to 6 summarize the statistics of 92 public high schools for the negroes, 86 of these schools being in the South and included in the statistics of public com-

mon schools given in Table 1. For the 92 schools there were 272 teachers in 1899-1900 and a total enrollment of 8,448. There were 3,216 pupils in elementary grades and 5,232 in secondary or high-school grades proper, as shown in Table 3. There were 1,083 students in the classical course, 1,303 in scientific courses, 2,788 in the English course, 100 in the business course, and 206 in the normal course. There were 600 pupils in manual training. The number of graduates from the high-school course was 646.

Table 6 gives a very incomplete financial summary of the colored high schools. Of the 92 schools, 59 had libraries aggregating 14,961 volumes, valued at \$13,041. The value of the property of 62 schools was \$661,875. The total income of 24 schools was \$36,555. In most cases separate accounts for public high schools are not kept.

SCHOOLS SUPPORTED FROM PRIVATE SOURCES.

There were, for the year 1899-1900, reporting to this Office, 145 schools of secondary and higher grade for the education of colored students and supported almost entirely by funds from private sources. The statistics of these schools will be found summarized in Tables 7 to 12.

The 145 schools had 37,696 students—22,043 in elementary grades, 13,267 in secondary grades, and 2,386 in collegiate grades. Of the students in secondary grades there were 4,881 in training courses for teachers, and of these 803 were graduated. In higher education there were 1,751 students in professional courses, as shown in Table 10. There were 15,683 pupils of all grades in industrial training.

The aggregate income of 123 of the 145 schools was \$1,182,365, as shown in Table 12. Of this aggregate \$312,950 was received by 39 schools from public funds, 99 schools received \$148,506 from tuition fees, 29 received \$142,932 from productive funds, and 102 schools received \$677,977 from other sources. The greater part of this latter sum must have been contributed by private individuals for the support of the schools during the year. It is shown in the first part of the table that 56 schools received in benefactions for the year \$661,486. Only 117 of the schools reported libraries, aggregating 247,780 volumes.

The statistics of the 92 public high schools are given in detail in Table 13. The detailed statistics of the 145 private schools are given in Tables 14 and 15.

CHAPTER XLIII.

STATISTICS OF REFORM SCHOOLS.

Reports were received from 80 of the 88 reform schools known to this Office for the year 1899-1900.

In these schools 538 instructors were employed. There were 21,626 pupils attending school and 14,673 in industrial departments. The total number of inmates was 23,901. The value of grounds and buildings was \$17,504,444. The expenditures on buildings and grounds amounted to \$576,344; for salaries and other expenses, \$3,254,690. The number of assistants, not including instructors in school departments, was 1,569. There were 20,279 white inmates and 2,695 colored inmates and 927 not reported as to race; 9,075 were of native parents and 6,924 of foreign-born parents. Those that could only read when admitted were 3,833, and 1,674 could neither read nor write.

The number committed to the institutions during the year was 12,759 and the number discharged 13,158. When discharged from the schools many of the pupils possessed a trade and were provided for in good homes; nearly all could read and write; the majority had received the equivalent of a common-school education.

The North Atlantic Division reports 33 schools, 243 instructors, 10,099 pupils in school departments, and 6,900 in industrial departments. The number of inmates reported was 10,683, of which number 9,052 were males and 1,631 females. The value of grounds and buildings was \$7,277,725. The expenditures on grounds and buildings amounted to \$169,295; for salaries and other expenses, \$1,458,120, making a total expenditure of \$1,627,405.

The South Atlantic Division reports 10 schools, 46 instructors, 1,819 pupils in school departments, and 1,095 in the industrial departments. Of the 1,819 inmates reported, 1,604 were males and 215 females. The total value of grounds and buildings was \$1,353,802. The amount expended for buildings and improvements was \$33,244; for salaries and other expenses, \$163,404, making a total expenditure of \$196,648.

The South Central Division reports 4 schools, 25 instructors, 1,022 pupils in school departments, and 885 in industrial departments; total number of inmates, 1,266. Of this number 793 are males and 473 females. The value of grounds and buildings was \$35,000. The total amount expended was \$93,614—for buildings and improvements, \$12,497, and for salaries and other expenses, \$86,117.

The North Central Division reports 27 schools, 199 instructors, 7,771 pupils in school departments, and 6,189 in industrial departments. The total number of inmates reported was 9,053, of which number 6,542 were males and 2,514 females. The value of grounds and buildings was \$8,067,000. The amount expended was \$1,644,710—for buildings and improvements, \$303,783, and for salaries and other expenses, \$1,340,927.

The Western Division reports 6 schools, 25 instructors, 915 pupils in school departments, and 877 in industrial. The value of grounds and buildings was \$770,908. The amount expended was \$263,657—for buildings and improvements, \$57,535, and for salaries and other expenses, \$206,122.

TABLE 1.—Summary of statistics of reform schools, 1899-1900.

State or Territory.	Number of schools.	Number of teachers.	Number of pupils.	Number taught trades.	Inmates.			Value of grounds and buildings.	Expenditures.	
					Male.	Female.	Total.		Buildings and improvements.	For salaries and other expenses.

CHAPTER XLIV.

SCHOOLS FOR THE DEFECTIVE CLASSES.

The sixty-fifth annual report of the New York Institution for the Blind contains a few interesting paragraphs on the use of the kleidograph, a machine with typewriter keys which enables the operator to produce embossed printed matter which may be read by the touch. It is maintained that the introduction of this machine marks a new period in the education of the blind, and is the greatest aid to language study ever brought into use for those who can not see. The following extract is taken from the report of the principal of the school, Mr. William B. Wait:

The study of language constitutes one of the chief pursuits in school life. It is not only an important end, but is, in fact, the chief means in all educational work. The student who can see uses language in every form—spoken, written, and printed—while pencil and paper, pen and ink, blackboard and chalk, together with numberless books, are all supplied free, or can be obtained at almost nominal cost. Against this array of advantages the blind primarily have spoken language only; and so in the beginning of their education the instruction was almost entirely oral. Later, punctographic handwriting, by means of a stylet and tablet, was devised, and this gave a new and most important means of expression. The ratio of the utility of the stylus and embossing tablet to that of the slate and pencil in general school work, however, is about as 1 to 100, and hence it was not until the introduction of the typewriting machine, supplemented to a limited extent by stylet writing, that an advance upon the oral method was gained. The typewriter keyboard is readily learned, and a whole class soon acquires the means of facile expression, thus greatly increasing the amount of language work that can be done in a given time, and in such form that class papers can be readily examined and criticised by the teacher.

Plane surface writing, however, has no tangible power, and hence it is clear that the chief advantage of typewriting to the student comes from the application of his knowledge during the exercise itself, and not from any direct use he can make of the paper he has written.

Although the advantages of facile expression afforded by the typewriting machine to both teachers and pupils have been very great, it is obvious that without some means of facile tangible writing our resources would ever be incomplete and inadequate.

In addition to many other contributions which this institution has made in promoting the education of the blind, it has overcome the last remaining difficulty mentioned above through the kleidograph, a machine which enables the blind student to write with facility in an embossed form, readable by touch. As language is not only the foundation of education, but the means by which all education proceeds, the important place which the kleidograph holds will at once be appreciated. This sketch briefly outlines the stages of progress and the methods of advance in this line of our work.

During the past year our facilities in this department have been strengthened by the addition of 20 new writing machines of the letter-press type, making 35 in all now at command for class purposes. These, together with 70 kleidographs, constitute an equipment unequaled by any school in the world.

The development of touch for the purpose of reading has always been a matter of deepest interest and large importance in all schools for the blind, but it has been a difficult matter to prescribe an orderly and satisfactory method for this work at all comparable with the methods pursued in teaching other subjects.

All embossed books are very expensive, and the work to be done within the period of school life is great and covers a wide field, so that it is important to attain satisfactory results within the shortest possible time.

Schools for the blind.—The total number of schools reported to this Office for the scholastic year 1899-1900, was 37; number of instructors, 437—male 144, and female 293; in music 142, and in the industrial departments 106. The total number of pupils was 4,021—male, 2,104; female, 1,917. In the kindergarten, 429; in vocal music, 1,815; in instrumental music, 1,833. The industrial department reported 2,235. The total number of volumes in the libraries was 94,689. The value of scientific instruments was \$78,928, and the value of grounds and buildings \$3,316,212. The total expenditures were \$890,711.

Schools for the deaf.—There are represented in this report 114 schools for the deaf, with 1,184 instructors and 11,104 pupils. The 56 State public schools report 1,012 instructors—male 344, and female 668; in articulation, 403; aural development, 90; and in the industrial departments, 267. The total number of pupils reported was 9,787, of which number 4,342 were taught by the combined system, 2,978 by the purely oral method, and 3,150 by the manual method; 696 were taught in kindergartens. The number of graduates was 393. The libraries of these institutions contained 90,239 volumes. The value of scientific apparatus was \$21,080; of grounds and buildings, \$12,115,856. The total expenditures amounted to \$1,863,126.

The private schools for the deaf reported were 17; the number of instructors, 73—45 in articulation, 11 in aural development, and 26 in industrial department. The number of pupils reported was 478, of which number 261 were taught by the combined system, 185 by the purely oral method, and 10 by the manual method; 42 were taught in the kindergartens.

The 41 day schools for the deaf report 93 instructors—53 in articulation, 29 in aural development, and 28 in industrial departments. The number of pupils reported was 749, of which number 124 were taught by the combined system, 609 by the purely oral method, and 12 by the manual method. The number taught in the kindergartens was 43. There were 3 graduates. Expenditures amounted to \$57,714. There was an increase of 10 schools in day schools reported, the greatest increase being in Wisconsin.

Schools for the feeble-minded.—The number of schools reported was 29, with 304 instructors in the school departments, 208 in industrial departments, and 764 assistants in caring for the inmates. The number of pupils reported was 11,217, of which number 1,103 were instructed in the kindergarten and 2,149 in music. The 19 State public schools reported 248 instructors in school departments, 171 in industrial departments, and 702 assistants caring for the inmates. The number of pupils reported was 9,792. Of these, 932 were in kindergartens and 1,995 in music. The value of grounds and buildings was \$3,608,198, and the expenditures were \$1,400,783.

CHAPTER XLV.

STATISTICS OF PUBLIC KINDERGARTENS.

There were 250 cities in the United States of over 4,000 population in 1899-1900 in which public kindergartens were maintained in connection with the city systems of public schools. The table on the next page summarizes the statistics of the public kindergartens. There was an increase of 37 in the number of cities supporting public kindergartens over the preceding year. The actual number of kindergartens reported was 1,815, an increase of 273. The number of teachers employed was 3,326, an increase of 497. The number of pupils in the kindergartens was 131,657, an increase of 21,763 over the year 1898-99. The information in Table 2 was furnished this Office by the city superintendents of public instruction. The table shows the number of public kindergartens in each city, the number of teachers, and the number of pupils by sex.

For the year 1897-98 this Office attempted to collect statistics of public and private kindergartens, kindergarten associations, and kindergarten training schools. The result was printed in Chapter LIII of the Education Report for 1897-98, pages 2537 to 2579. The Office, by much correspondence, procured the names of 2,998 private kindergartens known to have been in operation in 1897-98. After repeated requests for information, 1,519 private kindergartens reported statistics to this Office. Detailed information from the 1,479 other private kindergartens reported as still in existence could not be obtained. The 1,519 kindergartens reporting had 3,232 teachers and 47,853 pupils. Allowing proportionate numbers of teachers and pupils, it may be estimated that the 1,479 kindergartens not giving statistics had 3,173 teachers and 45,884 pupils. Taking this as a liberal estimate, the 2,998 private kindergartens had 6,405 teachers and 93,737 pupils in 1897-98. The statistics of the private kindergartens as thus estimated will be found summarized in the last three columns of Table 1 on the next page.

Estimating that the private kindergartens in 1899-1900 had an enrollment of 100,000, the number of children receiving instruction in kindergartens was not less than 231,657.

The following table gives the number of public and private kindergartens, the number of teachers, and the number of pupils, as reported to this Office for certain years, beginning with 1873:

Year.	Kinder- gartens.	Teachers.	Pupils.	Year.	Kinder- gartens.	Teachers.	Pupils.
1873	42	73	1,252	1882	348	814	16,916
1874	55	125	1,636	1884	354	831	17,002
1875	95	216	2,809	1885	415	905	18,832
1876	130	364	4,090	1886	417	945	21,640

TEACHERS' PENSIONS AND ANNUITIES.

In Part II of the Annual Report of this Bureau of 1894-95 a lengthy article on "Pensions for Teachers" was published. The subject was at that time discussed in nearly all the large cities of the United States, and several associations of teachers, for the payment of annuities or pensions after a stated time of service or in cases of disability, were formed. Of these the Report of that year gives a full account; it quotes the laws and constitutions of these associations, gives information concerning their relations to the State, whether they were incorporated, or whether the establishment of a pension fund was authorized by the legislature; what rate of premium was required from the members, the amount of annuity paid to disabled teachers, and other minutiae. The consensus of all concerned seemed to have been that 1 per cent of a member's salary was ample as an annual premium to insure him a pension in accordance with the amount of his salary.

But while there seemed to be few voices among teachers that denounced or rejected the scheme, some doubt was expressed by people engaged in the life insurance business as to the associations' ability to pay the stipulated pensions with a premium of 1 per cent of the members' salary during service. It was urged that the premium be raised to, at least, 3 per cent, for sudden calls upon the fund might at any time deplete it so completely that the whole scheme would collapse if the premium remained so small as 1 per cent.

How prudent this note of warning was is seen from subsequent events. Within three years for nearly all pension funds accumulated during the time of enthusiastic advocacy of the scheme, formed of 1 per cent of the members' salaries and sums realized from bazaars, concerts, and occasional bequests, the premium had to be raised. The funds of some cities were nearly wrecked by drafts upon them from pensioners, the number of which exceeded previous calculations. It is even to-day interesting and instructive to read the timely warning as published in the Report mentioned at the beginning of this article (see p. 1108 of Annual Report of 1894-95). It was uttered by an insurance expert and was accompanied by mortality and income tables, both comprehensive and convincing. To see how the old plan of 1 per cent premium worked, a few cases of the Chicago pension-fund

administration may be cited. The first two pensioners of four consecutive years may be picked out as examples:

	Date of pension.	Amount drawn from fund.	Amount paid into fund.
Jane A. B.	1896	\$1,332	\$32
Mary P. N.	1896	1,374	33
Lucy G.	1897	1,543	42
Minnie P. K.	1897	1,176	32
Hester A. B.	1898	1,133	43
Fanny J. K.	1898	1,168	64
Frances E. D.	1899	441	36
Kate McC.	1899	282	33

The whole amount paid to pensioners since the establishment of the fund in Chicago, up to January 1, 1900, was \$100,249, offset by only \$5,216 paid in by the beneficiaries of the fund. The disproportion between premium and benefit is glaring, especially if compared with the conditions of pension funds of teachers in Europe, a full account of which is found in Annual Report of 1898-99 (pp. 164-179). Hence it is not astonishing to hear that in Cincinnati (see Annual Report of 1898-99, p. 1481) and in several other cities the administration of the teachers' pension funds soon needed reorganization. In some places it is now proposed to leave the premium as low as it is, but to reduce the maximum sum paid to a beneficiary to \$500 per annum; in others an increased premium is advocated; again in others the number of years of service before annuities are paid is increased. While all these changes are going on, new pension funds are formed. Thus, for instance, in Minneapolis (see charter below). Nowhere is a doubt expressed in the ultimate proper adjustment of the funds, their in and out flow, and all difficulties that have arisen in the administration of the funds can be met with legal enactments, statutory amendments, and local adjustments, and are being met promptly. If in any instance they showed too rapid depletion or decrease, the officers applied to their constituents, the teachers, and immediate steps were taken to save the institution, hitherto always with success.

In *Minneapolis* the scheme proposed is a municipal one, being part of the new city charter submitted to the State legislature in January, 1900. The principal features of the proposed law for Minneapolis are those providing for retention of 1 per cent from the salaries of the teachers and requiring the city council to appropriate each year a sum equal in amount to the contribution of the teachers. The term of service is fixed at twenty years for both male and female teachers, the maximum pension is \$500, and payment terminates on death of beneficiary. The fund is not to be drawn upon until there is in it the sum of \$10,000. If the fund should prove inadequate, pensions are to be prorated.

Following is the proposed law in detail:

SECTION 1. There is hereby created a retirement fund under the name of the Minneapolis Teachers' Retirement Fund.

SEC. 2. It shall consist of: (a) One per cent deducted monthly from the salaries of the teachers, other than substitutes, regularly employed by the board of education of the city. (b) All moneys appropriated by the city council to said fund. (c) All deductions made from the salaries of said teachers from whatever cause, whether made under contracts in force at the time this charter goes into effect or thereafter. (d) All moneys turned into said fund from any other sources whatsoever.

SEC. 3. From and after the expiration of the time for which the salary of any teacher was fixed prior to the adoption of this charter there shall be deducted each month from the monthly salary of every such teacher an amount equal to 1 per cent thereof, and paid into the said retirement fund.

SEC. 4. The city treasurer shall deduct and pay into the said fund the said 1 per cent each month at the time he pays the salaries of the said teachers, and no teacher shall have the right at any time to recover the amount so deducted from said salary.

SEC. 5. In making the annual appropriation for the schools of the city of Minneapolis the city council shall include in such appropriation for the use and benefit of the Minneapolis Teachers' Retirement Fund a sum of money equal to 1 per cent of the salaries paid the teachers, other than substitutes, regularly employed by the board of education during the preceding fiscal year.

The sum so appropriated shall be annually paid to the city treasurer as custodian of said teachers' retirement fund, and together with the fines described in section 2 shall be by him disbursed only on the warrant of the board of education.

SEC. 6. The city treasurer of the city of Minneapolis shall be the custodian of said fund, and shall be liable on his official bond for the safe-keeping of same.

SEC. 7. The board of education shall have the charge and management of said fund, and shall invest and disburse in such manner and under such rules and regulations as it shall deem proper, subject, however, to the provisions of the following sections.

The board shall annually report the condition of said fund to the city council.

SEC. 8. Whenever said board of education decides that the general efficiency of the schools will be best served by the retirement of any teacher on account of age or physical or mental disability, said teacher may by a majority vote of all the members of said board be permanently retired from service, and shall thereafter receive from said fund, provided he or she shall have served twenty years as teacher in the schools of the city of Minneapolis, and not otherwise, a monthly allowance equal to one-half of the amount of the salary said teacher was receiving at the time he or she was retired.

And further provided, That the maximum allowance under this provision shall be \$500 to any teacher in any one year, and that said allowance shall terminate upon the death of said teacher.

SEC. 9. No appropriation shall be made from said fund, nor shall any teacher be entitled to its benefits, until said fund shall have reached the sum of \$10,000, and no appropriation shall ever be made from said fund for any other purpose than the permanent retirement of those teachers entitled to its benefits as provided in the preceding section.

SEC. 10. If the amount in said fund shall at any time be insufficient to pay in full the allowances due under the provisions of section 8 of this chapter, then said board shall, as often as the exigency arises, scale down all allowances pro rata, so that no teacher justly entitled to its benefits shall ever be wholly denied same by reason of the insufficiency of the fund to pay all allowances in full.

SEC. 11. The word "teacher" as used in this chapter shall be construed as including all superintendents of instruction, including the superintendent of schools, and all special teachers, supervisors, principals, and instructors regularly employed by said board.

Interesting, also, are some of the particulars of the workings of the pension laws of *Greater New York*, which are herewith given as quoted from the *School Weekly* of Chicago. They are taken from the annual report of the superintendent of schools and relate to the school year 1898-99.

Some items are as follows:

Total number of retired teachers.....	164
Number retired during year.....	26
Deaths of retired teachers during year.....	7
Total amount of annuities paid.....	\$95, 698. 89
Balance of retirement fund July 31, 1899, exclusive of excise moneys in—	
Manhattan and Bronx.....	45, 246. 74
Queens.....	3, 269. 50
Richmond.....	1, 027. 03
Amount of excise moneys, 1898, not apportioned.....	269, 094. 83
Amount of interest moneys not apportioned.....	3, 113. 52
Amount of interest moneys not funded.....	2, 631. 01

These figures apply only to the boroughs of Manhattan and the Bronx, Queens, and Richmond. The city of Brooklyn has a pension law specially applicable to itself. The borough fund is maintained from the following sources:

1. All money, pay, compensation, or salary, or any part thereof, forfeited, deducted, or withheld from any teacher or teachers for and on account of absence from duty from any cause.

2. All moneys received from donations, legacies, gifts, bequests, or otherwise, for and on account of said fund.

3. Apportionment of excise moneys amounting to 5 per cent.

4. All such other methods of investment as may be duly and legally devised for the increase of said fund.

Although the law has been in existence but two years, it will be seen that there are more pensioners than in Chicago. The amount paid out is thus far less than that paid to pensioners from Chicago schools. There is a balance in the treasury of nearly \$50,000, exclusive of the \$270,000 of excise money which has not yet been apportioned owing to an uncertainty in the construction of the law, but which is an asset of the fund.

The annuity is one-half the amount of annual salary drawn by the teacher immediately preceding retirement, but in no case exceeding \$1,000.

The board of education has power by a two-thirds vote of all its members, after a recommendation to that effect shall have been made by the city superintendent of schools, stating that the teacher is mentally or physically incapacitated for the performance of duty, to retire any female teacher of the public schools, including special teachers in the same, who shall have taught therein during a period aggregating thirty years, and to retire any male teacher of said schools who shall have taught therein during a period aggregating thirty-five years. The board may also, in its discretion, retire such teachers upon their own application, after the like period of service.

The fund is administered by the board of education and the money is kept in trust by the controller. No teachers have yet been retired in the boroughs of Queens and Richmond.

The pension law applicable to the city of *Brooklyn*, passed in 1896, is radically different to the borough law, and in many respects is similar to the Illinois law. The fund is secured by the board of education turning into the fund 1 per cent of the salaries paid each month to the teachers who should, prior to that date, elect to come under the provisions of the act, and a similar deduction and disposition of the 1 per cent from the salaries of all teachers appointed after January 1, 1896. It will be noticed that the privilege of election is granted to such teachers as were in the employ of the board prior to the passage of the law. There is a provision for receiving money from bequest. The board of education is given the right to retire teachers under the following conditions:

Male teachers not under 60 years of age; female teachers not under 55 years of age who have taught not less than thirty years, of which twenty immediately preceding the proposed retirement shall have been in the public schools of Brooklyn. Each teacher retired receives one-half of the amount of salary received by the teacher at retirement, provided, however, that no pension exceeds the sum of \$1,200 per annum; and it is further required that no teacher shall be retired unless he or she shall have paid into the retirement fund an amount equal to 20 per cent of his or her annual salary at the proposed date of retirement.

A few statistics from the report of last year follow:

Number of teachers retired during year	4
Number of annuitants died during year	1
Number on retired list July 31	38
Annuities paid year ending July 31	\$20,384.77
Balance of retirement fund July 31, exclusive of excise moneys	\$36,853.95

The Brooklyn law has not had the severe test given the Illinois statute.

In *Chicago* the necessity of amending the provisions of the pension law has been felt very acutely. A committee of revision was appointed in 1900. The report of this committee, which was laid before the convention of teachers interested in the fund on February 15, 1901, recommends a series of amendments to the present law. The Chicago School Weekly says:

As far as possible the good features of the present law are retained. The principal changes relate to the financial features and the membership of the board. In drafting the amendments the committee has had to keep in mind the differences between the teaching and employees forces, the necessity of making the provisions sufficiently elastic that the board of trustees may make rules to meet emergencies. It is proposed to make the whole board elective, except the superintendent, who is to be a member ex officio. The number of trustees is reduced to fourteen, including four school trustees and nine teachers and employees. The term of twenty-five years' service for full annuity, as now required, is recommended. A disability clause after fifteen years service is added, and a partial retirement clause after twenty years' service is favored. The disability annuity is subject to review, allowing the beneficiary after two years to return to her work. The twenty-year feature entitles the beneficiary to four-fifths of the annuity.

The maximum pension to be paid is \$400, as against \$600 at present paid. The contribution on the part of all teachers is the same, and no sum may be deducted from an amount exceeding \$1,000, and no one earning less than \$49 a month may participate in the fund.

Teachers will have deducted not less than 1 per cent nor more than 5 per cent of their salaries. Employees will contribute not less than \$20 nor more than \$60 a year. In response to the demand of the employees they will receive payments on a dependent and disability basis, and not annuity and disability basis, as in the case of teachers. As a result there will be two funds kept, one for employees and one for teachers. The money will be kept in three funds. A permanent fund, made up of gifts, legacies, and a certain amount set apart each year by the trustees, will be founded. Only the interest of this fund may be used. A reserve fund will be kept, made up of the annual surplus of receipts of the fund. This may only be drawn upon by order of a two-thirds vote. The general fund will be made up of the deductions from salaries.

The present annuitants will be provided for by regulation of the trustees. Every teacher who has been in the employ of the board since prior to 1895 will be given the privilege of electing to come into the pension plan. On all others the pension plan will be obligatory.

FULL TEXT OF AMENDMENTS.

The text of the pension law, amended according to the report of the committee of fifteen, reads as follows:

Be it enacted by the people of the State of Illinois in the general assembly represented: That the board of education in cities having a population exceeding 100,000 inhabitants shall have the power, and it shall be the duty of said board of education, to create (and maintain as hereinafter specified) a public-school teachers' and a public-school employees' retirement fund, which shall consist of—

(a) A permanent fund made up of gifts, legacies, bequests, etc., and a sum set apart by the board of trustees annually.

(b) A reserve fund which shall consist of the annual surplus of the general fund over the amount required to meet the current year's expenditures. Upon two-thirds vote of the contributors voting, any or all moneys in this fund may be transferred to the general fund.

(c) A general fund made up of the interest derived from said permanent and reserve funds and of amounts retained from the salaries or wages of teachers and employees, which amount shall be deducted in equal installments from said salaries or wages at the regular time for the payments of such salaries or wages and all moneys which may be derived from any and all sources not mentioned in (a). Said general fund shall be the only fund out of which benefits can be directly paid.

It shall be the duty of the board of education in cities where this act applies to provide such clerical help, printing, and legal assistance as the board of trustees of this fund shall deem necessary to carry out the provisions of this act.

The board of education shall, in the month of September immediately following the passage of this act, arrange for the election of a board of trustees of this fund, said election to be held not later than October 30 of the same year. This board shall have power, and it shall be its duty, to administer the fund and to interpret and carry out the provisions of this act.

NUMBER AND DUTIES OF TRUSTEES.

The board of trustees shall consist of four members of the board of education, the superintendent of schools, and nine teachers and employees, contributors to this fund.

The superintendent shall be ex officio a member of this board. The other members of the board shall be elected by the teachers and employees contributing to this fund, in the following manner:

At the first election there shall be elected by ballot from among the members of the board of education two members of the said board of education to serve for one year and two members of said board to serve for two years; and thereafter, in the manner and at the time prescribed in the rules of the board of trustees, two members shall be elected to hold office for two years, and at said first election the contributors shall elect three of their number to serve one year, three for two years, and three for three years, and annually thereafter the contributors shall elect three of their members to hold office for a period of three years.

No trustee shall hold office for more than three consecutive years, and shall hold office only while a member of or employed by the board of education. This board of trustees shall have power:

1. To determine the amounts to be deducted from salaries or wages paid to teachers or employees, provided that in the case of those designated in this act as "teachers" it shall not be less than 1 per cent nor more than 5 per cent annually of salaries received; provided that no deduction shall be made on any sum greater than \$1,000, and that in the case of those designated in this act as "employees" the amount deducted shall be not less than \$20 nor more than \$90 per year. They shall have power to establish a sliding scale of deductions.

2. To make payment from said general fund in pursuance of this act, and to administer and invest the fund or funds subject to such limitations as are provided in the act of which this act is amendatory.

3. To pay all expenses not otherwise provided for; first, out of the general fund; second, out of the reserve fund.

4. To fix, increase, or reduce benefits at any time, provided that no annuity shall exceed \$400 per annum, and that all annuities for equal service shall be uniform in amount.

To take by gift, grant, bequest, or otherwise any money, real estate, personal property, right of property, or other valuable thing.

To have, hold, purchase, sell, assign, and transfer any of the securities in which any part of the said fund may be invested.

5. To fill any vacancy in the said board until the next annual election.

6. To make, in addition to rules for their own government, such general rules as may be necessary to carry out the spirit and intent of this act.

They shall keep full and complete records of their meetings, and of the receipts and disbursements on account of this fund; also complete list of and records of the annuitants and contributors.

They shall hear and decide all applications for benefits under this act. They shall have power to suspend any annuity granted for disability, provided such annuity is for a less number of years than four-fifths of the full term of service, whenever in their judgment the beneficiary is able to work, or for other good cause.

They shall have power to frame a rule granting to dependents of employee-contributors a partial annuity or benefit.

They shall have power to liquidate any claim against the fund, provided there shall be no rule allowing restitution of deductions after said contributor shall have been eligible to benefits.

Members of the board of trustees may receive a salary or compensation not to exceed \$50 per year.

RETIREMENT OF CONTRIBUTORS.

Any contributor upon retiring, after a period of not less than twenty-five years of service and a like number of years of contributing to the fund of this act, or to the fund of the act of which this act is amendatory, shall be entitled to the full annuity then paid.

Any contributor upon retiring, after a period of not less than twenty-five years' service, and who has contributed to the aforesaid fund less than twenty-five years, shall be entitled to receive the full annuity then being paid, provided said teacher or employee shall contribute to the aforesaid fund a sum equal to the total contribution, with accrued interest for a full annuity; which sum shall be fixed by the board of trustees. If the aforesaid sum be not paid, then he or she shall be entitled to receive one-half of such portion of the full annuity then paid as his or her years of contributing to the aforesaid funds bear to twenty-five years, plus the ratio which the total amount deducted from said contributor's salary bears to the total amount of the full contribution.

PENSIONERS UNDER PRESENT ACT.

Any annuitant receiving a pension under the law of 1898, of which this act is amendatory, shall, upon the passage of this act, cease to receive benefits under the said law, but in lieu thereof shall be entitled to receive such portion of the full annuity fixed by the board of trustees under this act as his years of contributing to the fund of this act and of the act of which this act is amendatory bear to twenty-five years or the board of trustees may provide. That annuitants under the act of 1895 may receive full annuities under this act, provided they shall pay into this fund a sum which, together with that already contributed by them, shall equal the total contribution of twenty-five years, with accrued interest; said amount to be fixed by the board of trustees.

All moneys contributed to the fund of the law of 1895 and now on hand shall be transferred to the reserve fund of this act.

The term "employee" under this act shall include engineers, janitors, janitresses, and office employees, and the term "teacher" shall include superintendent, district superintendent, supervisor, special teacher, principals, teachers.

Any teacher or employee who has been contributing to this fund less than fifteen years, or fund of act of which this is amendatory, and who shall be dismissed from service of said board of education, may upon application within three months after date of such retirement receive one-half of the total amount paid by such teacher into such fund.

This act shall not be binding upon teachers or employees in the service prior to January 1, 1896, but such of those as choose may come under its provisions by notifying the secretary of the board of trustees to that effect on or before July 1, 1902.

This act shall not apply to teachers or employees earning less than \$49 per month.

No teacher or school employee who is a contributor to the fund created under this act shall be removed or discharged except for cause, upon written charges which shall be investigated and determined by the board of education, whose action and decision in the matter shall be final.

Benefits can not be assigned, mortgaged, or attached.

The city treasurer shall be custodian of aforesaid permanent reserve and general funds and shall secure and safely keep the same, subject to the control and direction of said board of trustees, and shall keep books and accounts concerning said fund in such manner as may be prescribed by the said board, and said books and accounts shall always be subject to the inspection of the said board or any member thereof.

The treasurer shall, within ten days after his election or appointment, execute a bond to the city with good and sufficient securities in such penal sum as the said board of trustees shall direct, to be approved by the said board, conditioned for the faithful performance of the duties of his office, that he will safely keep and well and truly account for all moneys and profits which may come into his hands as such treasurer and that on the expiration of his term of office he will surrender and deliver over to his successors all unexpended moneys and all property which may come into his hands as treasurer of such fund. Such bond shall be filed in the office of the clerk of such city, and in case of a breach of the same or the conditions thereof, suit may be brought on the same in the name of said city for the use of said board of trustees or by any person or persons injured by such breach.

The president and secretary of such board of education shall certify monthly to the city treasurer all amounts deducted from the salaries of the board of education in accordance with the provisions of this act, as well as all other moneys contributed to the said fund.

One feature of the Chicago pension law was particularly objectionable to some teachers, to wit, the compulsory nature of the measure; hence many advocated having an optional clause inserted, so that teachers who do not desire to enter the membership shall not be obliged to do so. This idea was agitated throughout the city and found many friends. The board of trustees of the fund themselves favor

this. A committee has arranged with Chicago representatives to introduce the bill to the legislature at Springfield. Following is an address to the legislature:

To the members of the forty-second general assembly of the State of Illinois:

The present teachers' pension law went into effect July 1, 1895. Under it each teacher in the Chicago public schools receives but 99 per cent of his salary and the remaining 1 per cent goes into the pension fund. It has been evident for some time that the income was utterly inadequate, and the teachers in both the grammar and high schools are practically unanimous in opposition to the present law.

The following petition has been signed by 2,463 teachers in the Chicago public schools, and 90 schools have not yet (March 21, 1901) been heard from:

"We, public-school teachers and employees in the city of Chicago, are opposed to the present pension law, or the enactment of any so-called pension law or retiring fund containing a compulsory clause."

We simply ask that the present or any proposed pension law be so amended that teachers may participate in its obligations and benefits or not, as they choose. We urge this for the following reasons:

1. If the pension law is desirable it does not need to be compulsory, a simple enabling act is enough. A voluntary pension system could live if any considerable part of our teaching force really wanted to contribute to a fund so that they might draw an annuity in their old age. Why is it necessary to force other teachers into it against their wishes and judgment?

2. Wise provision for one is not necessarily wise provision for another. Some may want an annuity for their old age, others, life insurance, while still others may want neither. Each should be free to choose for himself. Most of the men teachers are married and have families depending upon them. If they die in the service their wives and children get nothing; their contribution to the pension fund is a dead loss. This money was earned by them, and they should have the right to determine the manner of its expenditure.

Practically the same is true of a great number of our women teachers. Many of them are the main breadwinners in families; and probably the majority of them contribute to the support of mothers or brothers or sisters, for our teachers are not drawn from the wealthy. Suppose one of them dies, what becomes of her contributions to the pension fund? While her relatives are raising the money to meet her funeral expenses, if we may judge from the course of many of our present annuitants, her money may be spent by some pensioner on afternoon teas. Is it right to compel her by law to contribute to this pension fund against her own judgment?

3. According to an estimate made by Mr. W. E. Watt, only one out of every twenty-five contributors will ever receive a pension. The rest resign or get married or accept positions elsewhere, or die in the service. This is doubtless a fine thing for the one, but how about the other twenty-four? It has a little the appearance of a lottery in which there is one prize for every twenty-five tickets. We do not ask that the lottery be abolished, but we ask that the law shall cease compelling us to purchase tickets.

4. We hold that everyone (including public-school teachers) should be free to spend the dollar earned in accordance with individual judgment.

According to a table prepared for the *School Weekly*, showing the amount of money paid into the pension fund by each individual pensioner and the amount each had drawn out up to January 1, 1900, the total amount paid by those who were then drawing pensions was \$5,216 and the total amount they had received was \$100,249. On the average each annuitant had received \$739 and paid in \$41.

(Signed by committee) W. J. Harrower, Mary Wibirt, Hiram B. Loomis, Charles H. Perrine.

THE MOVEMENT IN OTHER STATES.

The following account of the movement in other States is also taken from the *Chicago School Weekly*:

A report of the working of the *New Jersey* teachers' retirement fund shows that twenty-nine teachers are now receiving annuities of \$316 and a total of \$8,000 has been paid out. The fund was established in 1896. It is maintained by contributions of 1 per cent from teachers' salaries.

In the *New York State* assembly a bill has been introduced under the provisions of which the board of education may retire, by a two-thirds vote of all its members, incapacitated women superintendents, tutors, and critic teachers in the normal college or its training department who have taught thirty years in that institution or in the public schools.

FOREIGN STUDENTS IN GERMAN UNIVERSITIES.

While during the summer semester of 1899 there were 2,284 foreigners matriculated in German Universities, the number reached nearly 2,700 in the winter of 1900-1901. This number does not include about 2,000 foreign "hearers" who can not be matriculated as regular students owing to their want of the preparation prescribed by law; nor does the number include the foreign students of polytechnica, art academies, music conservatories, and agricultural, forestry, and mining academies. The Annual Report of this Bureau for 1893 gives a summary of foreign students in polytechnica and agricultural, forestry, and mining academies for that year, which shows a total of 1,276. If the art and music students were added, the total number of foreign students in higher institutions in Germany would rise to 4,000. The following figures have reference to foreign university students only.

Of the 2,284 students mentioned 563 studied philosophy, philology, and history; 480 studied mathematics and natural science; 477 studied medicine; 299, law; 284, agriculture, forestry, and political economy; 150, theology, and 31, dentistry; making a total of 2,414, which indicates that some—130—studied in two faculties.

The "hearers" (nonmatriculated students) have all the privileges of regular students, such as attendance at lectures and exercises, use of library, laboratories, and other agencies if they pay the prescribed fees; but not being matriculated, their names are not kept on the rolls, nor can they acquire degrees or compete in State examinations, the successful passing of which opens up a career in the service of the State, which is coveted by native Germans and is granted almost exclusively to them.

Foreign students came from nearly all the civilized countries. From Russia 594, Austria-Hungary 467, Switzerland 289, England 159, Bulgaria 69, the Netherlands 50, France 41, Servia 39, Italy 37, Turkey 33, Roumania 32, Sweden and Norway 31, Luxemburg 24, Greece 23, Belgium 19, Denmark 3, Montenegro 3, Spain 3; total from Europe, 1,857. From Asia, chiefly from Japan, came 101; from Africa 21, from Australia 5, and from America 300. The report fails to specify from what part of America the last mentioned came.

The total number of matriculated students in German universities has increased 20 per cent in five years. The number of foreigners among them has increased at a slightly larger ratio, to judge from partial returns, but most of these foreigners are found in the medical and philosophical faculties. Few foreign students study theology, and also comparatively few study law in Germany.

The following numbers will show which universities are preferred by foreigners: Berlin had in 1899 655 foreign students, Leipzig 322, Heidelberg 205, Munich 196, Halle 138, Freiburg 96, Göttingen 93, Strassburg 75, Jena 71, Marburg 66, Würzburg 59, Bonn 50, Königsburg 49, Tübingen 48, Breslau 40, Giessen 35, Erlangen 33, Greifswald 22, Kiel 22, Rostock 7, and Münster 2. In 1900 Berlin had 714 foreign students.

For detailed statistics concerning the attendance of women in the universities of the Kingdom of Prussia, see the Annual Report of this Bureau for 1898-99, Vol. 2, pages 1486-1489. The number of women studying in Berlin in 1900 was 439. In 1900 at the University of Berlin there were 366 students matriculated in the faculty of theology, 2,359 in the faculty of jurisprudence, 1,312 in the faculty of medicine, and 2,636 in the faculty of philosophy. With respect to nationality 4,679 students came from Prussia, 994 from the other States of the Empire, and 714 from foreign countries. Of foreigners of European origin the majority (318) come from Russia, 112 from Austria, 88 from Switzerland, 62 from Hungary, 32 from Great Britain and Ireland, 22 from Italy, 20 from France, 20 from Roumania, 17 from Turkey, 17 from Servia, 16 from Bulgaria, 15 from Sweden, 15 from Greece, 12 from the Netherlands, 11 from Luxemburg, 5 from Belgium, 4 from Spain, 3 from Denmark, and 1 from Portugal. Of foreign students from distant parts of the world 114

come from America, 62 from Asia, 3 from Africa, and 1 from Australia. Berlin University is therefore in reality cosmopolitan.

In addition to the duly registered students there are 5,466 persons who attend the lectures there as hearers not entitled to admission to State examinations, but allowed to acquire academic degrees.

In Switzerland during the winter of 1898-99 there were in the ten higher institutions 1,163 students who were residents of the canton in which the institutions are located, 1,465 were from other cantons, and 1,946 were foreigners, an increase of 346 in five years. Foreign students therefore form 42.5 per cent of the whole number of university students in Switzerland.

HIGHER COMMERCIAL SCHOOLS IN EUROPE.

The subject of higher commercial education of the same grade as that afforded by the universities and technological institutions is still uppermost in the discussions on educational movements in Europe. Since a commercial university has been founded in Leipzig, other institutions of like or similar kind have been opened (1) in Aachen (Aix-la-Chapelle), Rhenish Prussia, in connection with the polytechnic institute at that place; (2) in Hamburg, where the wealthy leaders of transoceanic commerce have combined to establish a higher school, separate and distinct from any other educational institution; this new school is a commercial university, in which particularly the international commercial relations and modern languages are taught; (3) in Cologne, Rhenish Prussia, where the particular commercial interests of industrial Germany are represented. Hence, Germany has at present 22 universities, 10 technological institutes, 4 commercial institutions of university rank, and a number of higher agricultural, mining, and forestry schools, all of which are either independent institutions or affiliated with old-established universities.

Course of study of the Leipzig Commercial University.—In order to fully understand the high grade of this course, which is one of two years, it is necessary to know that admission is granted only to the graduates of gymnasia, i. e., classical or semiclassical high schools, which are virtually colleges. The nature of a German university precludes the prescription of any course of study. This can not be more clearly illustrated than by an analogy: A German university is like a restaurant in which one eats “à la carte,” while the American university is like a “table d’hôte,” where a set and prepared menu is served. This means that the German student, coming as he does to the university at 20 years of age, chooses his own mental fare, but certain advice is given him with an outlook toward the final examination.

The studies which are offered (“à la carte”) in this commercial university are political economy and all branches related thereto, such as commercial history, economic or applied geography, and general technology, as well as commercial and marine law, law of exchange, and principles of the civil code, together with modern legislation affecting political economy and finance.

These studies are calculated to keep students busy during the four semesters. Only the most competent can master statistics, finance, jurisprudence, anthropological geography, ethnography, and similar studies within the same length of time. Still these studies are offered also, necessarily in condensed form. The curriculum of the university includes also correspondence and counting-house practice, commercial arithmetic, bookkeeping, mechanical technology of textile industry, and chemical technology. These latter branches are a continuation of studies found in commercial secondary schools, but more difficult problems are considered theoretically in the university. The practical exercises in commercial usages are held

in the practice school, the former commercial high school, and since much importance is attached during the final examination to skill in commercial practice, these exercises are well attended. The university grants a "diploma of completion of commercial studies" after two years regular attendance and the passing of a final examination. In Hamburg and Aix-la-Chapelle the course is slightly different, owing to local needs.

Prof. H. Raydt, the director of studies in the Commercial University of Leipzig, publishes the course offered there in this way (the numbers in brackets signify the number of students pursuing the study during the first year after the opening of the institution):

General political economy [73]; commercial, exchange, and marine law [70]; legislation for commerce and transportation [56]; bookkeeping [58]; office work and correspondence [58]; commercial and political arithmetic [51]; technology of textile industry [27]; geography and colonization [24]; general technology [21]; chemical technology [21]; universal history of modern times [16]; geography of central Europe [13]; insurance mathematics [14]; introduction into the study of statistics [13]; history of the era of discoveries [7]; French and English commercial correspondence; French, English, Italian, Spanish, and Russian languages for beginners; German language for foreigners, and stenography with typewriting.

The number of students has very greatly increased since the first semester, when the foregoing items were noted.

From a recent educational bibliography published in the *Educational Review* (April, 1901) a few articles and books on the subject may be mentioned as having bearing upon the movement for higher commercial education in this country.

Adams, C. K.—The establishment of a school or college of commerce in the University of Wisconsin; appeared in *Bulletin of University of Wisconsin*. It is a report to the regents of the university advocating such a school.

Herrick, C. A.—Commercial education. This is a supplement to the fifth year-book of the National Herbart Society.

James, E. J.—Commercial education in secondary schools. Appeared in *Educational Monographs*, N. M. Butler, editor.

Monaghan, J. C.—Industrial education in Germany. Appeared in *Proceedings of University Convocation of the State of New York* (thirty-eighth convocation).

Thurber, C. H.—Commercial education. Appeared in *School Review* (April, 1900).

What secondary studies are most valuable for a business life? Discussion appeared in *Proceedings of the Thirty-eighth University Convocation of the State of New York*.

The Annual Reports of the Bureau of Education contain a number of articles on the subject. See—

REGULATIONS RELATING TO CORPORAL PUNISHMENT IN CITIES OF OVER 100,000 INHABITANTS.

Corporal punishment is forbidden in the schools of—

The entire State of New Jersey. (New Jersey School Laws, 1899, p. 28, secs. 71 and 72.)

Boroughs of Manhattan and the Bronx, New York City. (Rules and Regulations, 1900, p. 62, sec. 64-1.)

Borough of Richmond, New York City. (Manual and Course of Study, 1899, p. 9.)

Chicago, Ill. (Rules and Regulations, 1898, p. 28, sec. 62.)

Baltimore, Md. (Rules, 1900, p. 17, art. 11.)

Cleveland, Ohio. (Handbook, 1899-1900, p. 77, sec. 23.)

St. Paul, Minn., except to repel violence, etc. (Forty-first Annual Report, p. 153, sec. 134.)

Syracuse, N. Y. (Rules and Regulations, 1898, p. 30, sec. 20.)

Providence, R. I., in grades above primary; permitted only with parent's consent in primary grades. (By-laws, 1897, p. 23, art. 15.)

Toledo, Ohio. (Rules, 1885, p. 53, sec. 3.)

REGULATIONS IN OTHER CITIES OF OVER 100,000 INHABITANTS.

Philadelphia, Pa.: There is no rule, but corporal punishment is said to have been abandoned by common consent.

For the borough of Brooklyn and the borough of Queens, New York City, there is no information at hand.

St. Louis, Mo.: May be administered only by a principal, or in his presence and by his consent. It must be avoided as far as possible. (Rules, 1897, p. 73, rule 47, sec. 4.)

Boston, Mass.: Forbidden in high schools and kindergartens and as to girls in grammar schools. In any case it is restricted to blows upon the hand with a rattan. Each case must be reported through the principal to the superintendent. (Rules and Regulations, 1898, secs. 218 and 241.)

Buffalo, N. Y.: The schools must be governed as far as possible without corporal punishment. Except when the superintendent gives special permission to other teachers, only a principal or acting principal may inflict it. (Charter and ordinances, 1896, Chap. XIV, p. 218, sec. 39.)

San Francisco, Cal.: May not be inflicted in the high schools or upon girls in any schools. It is permitted only in extreme cases and may be inflicted only by principals or by vice-principals, with the consent of principals. Excessive punishment is prohibited, only a strap or a rattan being allowed. (Rules, 1900, p. 25, sec. 64.)

Cincinnati, Ohio: May not be inflicted for failures in lessons or recitations. Blows on head or violent shaking of pupils prohibited. (Sixty-sixth Report Board of Education, 1895-96, p. 199, sec. 84.)

Pittsburg, Pa.: No recent information is at hand.

New Orleans, La.: May be inflicted only in extreme cases as a last alternative, and only by the principal or by his express authority. Must not be inflicted in the presence of the class or during lesson in which offense was committed. Blows upon the head and lonely confinement forbidden. (Rules and Regulations, 1896, p. 9, sec. 13.)

Detroit, Mich.: Must be avoided if possible. Must not be inflicted without full knowledge and consent of principal. (Rules Board of Education, 1888, p. 27, rule 89.)

Milwaukee, Wis.: Permitted, as last alternative, by principal only. Excessive punishment and lonely confinement prohibited. Must not be inflicted in presence of class. All cases must be reported monthly to superintendent. (Rules and Regulations Board of School Directors, 1893, art. 13, sec. 7.)

Washington, D. C.: Must be avoided if possible. All cases must be reported monthly to principal and through him and supervising principal to superintendent. (Rules, 1900, p. 10, sec. 50.)

Louisville, Ky.: Must be avoided as far as possible. Cruel punishment or confinement in closets prohibited. May be inflicted only after nature of offense has been fully explained to pupils. (Manual of School Board, 1898, p. 31, sec. 3, rule 3.)

Minneapolis, Minn.: Permitted only when all other means fail. Principals only may inflict corporal punishment; then only when parents give written consent. (Twenty-second Report Board of Education, 1899, p. 139, sec. 58.)

Indianapolis, Ind.: Must be avoided as far as possible. May be inflicted only in presence of principal, and must be immediately reported by him to superintendent. (Manual of Public School, 1900-1901, rule 51, sec. 11.)

Kansas City, Mo.: May be inflicted in cases of flagrant offenses, and then only after duly notifying parents (or guardians) of intended punishment; and if parent or guardian will administer punishment, so as to preserve discipline of the school, teacher must inflict no additional punishment. Must not be inflicted in presence of school, but at the close of session and in presence of two other teachers or the superintendent. (Rules and Regulations Board of Education, 1888, p. 25, sec. 81.)

Rochester, N. Y.: May be inflicted in extreme cases by the principal or with his consent by an assistant. (By-laws and rules, Board of Education, 1898, p. 38, sec. 5.)

Denver, Colo., district No. 1: May be inflicted only after consultation with and with consent of principal. When practicable, superintendent should be consulted. All cases must be immediately reported to superintendent. (Twenty-fifth Annual Report Board of Education, district No 1, 1899, p. 112.)

Allegheny, Pa.: Must be avoided when obedience and good order can be preserved by milder measures. (Rules, Twenty-sixth Annual Report Superintendent Public Schools, 1899, p. 109, sec. 3.)

Columbus, Ohio: Allowed when all other means have failed. To be inflicted in schoolroom by pupil's teacher, the principal being the judge of special cases. Punishment in the nature of personal indignity forbidden. (Report, 1890, p. 334, secs. 27, 28.)

Worcester, Mass.: Permitted only in extreme cases, then only when approved by principal or superintendent. Must not be inflicted in presence of school. Teachers are required to make and keep complete record of all cases. (Rules of School Committee, 1900, p. 22, sec. 12.)

New Haven, Conn.: May be administered, with consent of principal, in extreme cases only, but never at same session of school at which the offense was committed. Cases to be reported monthly to superintendent. (Manual, 1891, p. 56, sec. 176.)

Fall River, Mass.: May be inflicted where milder measures fail. Must not ordinarily be administered in presence of school. Record of each punishment and offense must be sent to superintendent for inspection of the board. (Rules and Regulations, 1894, p. 13, sec. 46.)

St. Joseph, Mo.: Must be avoided as far as possible. Each case to be reported to principal and by him monthly to superintendent. (Report, 1889-90, p. 170, sec. 12.)

Omaha, Nebr.: No information is at hand.

Los Angeles, Cal.: Must be avoided if possible; switch or strap to be used; blows upon face or head forbidden. (Report, 1898-99, p. 172, sec. 55.)

Memphis, Tenn.: Must be avoided when good order can be preserved by milder measures. (Manual, 1897-98, p. 53, sec. 48.)

Scranton, Pa.: No information is at hand.

Cambridge, Mass.: Prohibited except by written permission of the superintendent. When pupil persistently violates rules superintendent may give authority to inflict it for remainder of term, having sent due notice to parent or guardian. (Rules, School Committee, 1899, p. 15, sec. 76.)

REQUIREMENTS AS TO VACCINATION IN THE PUBLIC SCHOOLS OF 19 CITIES.

- A physician's certificate of vaccination is required in—
 New York. (Rules and Regulations, Manhattan and the Bronx, 1900, p. 64.)
 Chicago, unless applicant has had smallpox. (Rules and Regulations, 1898, p. 30.)
 Philadelphia, unless applicant has had smallpox. (Rules, 1897, p. 292.)
 Boston, except where physician certifies that child is unfit for vaccination. (Rules and Regulations, 1900, p. 44.)
 Cleveland, vaccination or other protection. (Handbook, 1899-1900, p. 62.)
 Buffalo. (Charter and Ordinances, 1896, p. 231.)
 Detroit. (Rules, 1895, p. 24.)
 Milwaukee. (Rules and Regulations, 1891, p. 44.)
 Newark, unless child has had smallpox. (Report of 1899, p. 365.)
 Providence. (By-laws, 1897, p. 20.)

OTHER PROVISIONS.

- St. Louis, children admitted, provided they have been vaccinated. (Rules, 1897, p. 78.)
 Baltimore, vaccination or other protection from smallpox required. (Rules, 1900, p. 15.)
 San Francisco, satisfactory evidence of vaccination required. (Rules 1900, p. 38.)
 Cincinnati, satisfactory evidence of vaccination required. (Manual, 1895, p. 198.)
 New Orleans, satisfactory evidence of vaccination required. (Rules, 1896, p. 5.)
 Washington, vaccination or other protection from smallpox required. (Rules, 1900, p. 1.)
 Jersey City, vaccination or other protection from smallpox required. (Report 1896, p. 148.)
 Louisville, evidence of vaccination or other protection required. (Manual, 1893, p. 23.)
 Minneapolis, evidence of vaccination or physician's certificate that child should not be vaccinated is required. (Annual Report, 1900, p. 134.)

TRANSPORTATION OF PUPILS TO SCHOOL.

The practice of consolidating small schools and transporting the more distant pupils to a central school at the public expense is now being carried out to a greater or less extent in eighteen States, to wit: Connecticut, Florida, Indiana, Iowa, Kansas, Maine, Massachusetts, Nebraska, New Hampshire, New Jersey, New York, North Dakota, Ohio, Pennsylvania, Rhode Island, South Dakota, Vermont, and Wisconsin.

The amount expended for transportation in Massachusetts increased from \$30,649 in 1890-91 to \$141,754 in 1899-1900; in Vermont from \$11,122 in 1893-94 to \$26,492 in 1899-1900. These figures tend to show that the practice continues to spread where it has once gained a foothold. The case of Ohio might also be cited, where transportation was first tried in the township of Kingsville in 1892; the next legislature extended it to three specified counties; as a result of the object lesson afforded, a general law covering the whole State was passed in 1898.

It is the general experience that a saving of funds is effected through consolidation of schools. Of the towns in Massachusetts that have tried the plan, 68 per cent report a less cost after consolidation, and only 8 per cent an increased cost.¹

¹ 62 Mass. Rep. (1897-98), p. 456.

Of 124 New Hampshire towns, 118 report less cost with conveyance as compared with maintaining local schools, 5 report the cost the same, and 1 the cost greater; 26 give the cost with conveyance as one-half of that with local schools, 8 give one-third, 7 give one-fourth, 3 give one-fifth, and 1 each one-sixth, three-eighths, two-fifths, and three-fifths.¹

Connecticut transported 849 pupils in 1898-99 at a cost of \$12,000, or \$14.14 per pupil; Vermont 2,032 pupils for one year at a cost of \$26,492, or \$12.85 per pupil. These are averages. In individual cases the cost varies greatly according to the particular circumstances in each case.

The testimony is very general that consolidation results in improved schools, and is well nigh unanimous that attendance is more regular.²

In cases where centralizing the schools would be beneficial it would seem that the manifest and fundamental advantages to be gained must in the end prevail over the inertia of conservatism, unreasoning prejudice, or petty self-interest, and such appears to be the actual trend of events; the just apprehensions of parents may be allayed by procuring fit and trustworthy drivers and making suitable regulations.

State Commissioner T. B. Stockwell, of Rhode Island, says: "I know of no other possible way whereby the rural sections of the State can ever again be provided with anything like suitable schools."³

PRESENT STATUS.

Connecticut.—A law of 1889 provided for the discontinuance of small schools and their union with schools of adjoining districts. In 1893 free transportation of pupils was authorized. In 1899 the number of schools closed was 84; pupils transported, 849; cost, about \$12,000.

Florida.—"Several counties have inaugurated the system of consolidating the smaller schools and transporting the pupils by wagons." (Florida School Report, 1900, p. 19.)

Indiana.—"Forty counties have already begun the work of collecting pupils into larger groups by transporting them." (Indiana School Report, 1900, p. 529.)

Iowa.—The law provides that where there will be a saving of expense, and children will also thereby receive increased advantages, school boards may arrange for the transportation of any child to and from school.

Several places have taken advantage of this law.

Kansas.—"Our present law allowing districts to discontinue schools and send the pupils to other schools is inadequate." (Kansas School Report, 1900, p. 23.)

Maine.—By an act of 1893 and subsequent amendments schools having too few scholars may be suspended for one year; schools having less than eight pupils are discontinued. The superintendent of schools must provide transportation for all pupils who reside so far from school as to render it necessary, or may board scholars near schools.

Massachusetts.—A law of 1869 provides that the school committee of any town may expend money in their discretion in transporting pupils to and from school. "The smaller towns are consolidating generally their feeble schools and conveying their children to stronger central ones." (Massachusetts School Report, 1900, p. 132.)

There was expended for conveyance in 1890-91, \$30,649; in 1899-1900, \$141,754.

Nebraska.—A law of 1897 authorizes the transportation of pupils who live so far from school as to render attendance impracticable without transportation. A district board may contract for the instruction of all pupils in a neighboring district and transport them thither.

Twenty-one counties contain schools in which one or both features of the law have been tried. Fifty-seven pupils were transported, at a cost of \$560; 158 pupils

¹ 51 N. H. Rep. (1900), pp. 276-281.

² 62 Mass. Rep. (1897-98), pp. 454, 455.

³ R. I. Rep. (1899), p. 86.

attended school in adjoining districts for an average of seven months at a total cost of \$1,471. "Those making the report are unanimous in the opinion that the law is beneficial." "The difficulty in inaugurating any new system, where prejudice and long-established usages prevail, is met here as well as in other matters." (Nebraska School Report, 1900, pp. 40-43.)

New Hampshire.—Towns are authorized to expend a portion of the school money, not exceeding 25 per cent, in conveying children to and from school. (New Hampshire School Laws, 1898, chap. 92, sec. 1.)

New Jersey.—Children living so far from school that they are unable to attend may be transported at the public expense. (New Jersey School Law, 1899, p. 43.)

New York.—School districts are authorized to contract with adjoining districts for the tuition of their children, and to convey them at the public expense; 150 such contracts were made in 1898-99. There are still in the State 3,552 districts (nearly one-third of the whole number) with an average attendance of 10 or less. (New York School Report, 1900, p. 55.)

North Dakota.—Schools with an average attendance of less than four on ten consecutive days may be discontinued. Two or more schools may be consolidated and pupils transported. (North Dakota General School Laws, 1899, sec. 704.)

Ohio.—In 1894 a special law was passed authorizing centralization and transportation in Kingsville, Ashtabula County. The experience of Kingsville is detailed at some length in the Report of this Office of 1898-99, pages 526-529. The succeeding legislature passed a measure applicable to the counties of Stark, Ashtabula, and Portage. In 1898 the law was made general. As it now stands boards of education may submit to a vote the question of township centralization, and must submit it upon petition of one-fourth the electors. (Ohio School Report, 1900, pp. 12-15.)

Pennsylvania has a law (dating from 1897) authorizing directors to provide transportation, but only for pupils of schools that have been closed by reason of small attendance, and who will have a greater distance to travel than before, and with the proviso that the cost per pupil shall not exceed the cost of maintaining the schools so closed.

Rhode Island.—A law of 1898 authorizes school committees to consolidate any schools that have an average number belonging of less than twelve, and provide transportation for pupils. Any town may consolidate three or more ungraded schools. Any district with ungraded school may consolidate with district having graded school. The State pays \$100 to each district so consolidated. A few ungraded schools have been consolidated; the conveyance of the children still remains as the great obstacle. Two schools of Burrillville formerly cost the town \$600 per year. Consolidated with others the cost for transportation was \$427.50.

South Dakota.—"We understand the school laws of this State are sufficient to allow a school township to try this plan, or even two or more subdistricts may unite their schools into one, so that centralization may be tried in this State at once." (B. D. Kribs, in South Dakota School Report, 1900, p. 13.)

The reports of the county superintendents show that the question is much discussed and that a beginning has been made in three or four counties; elsewhere considerable opposition has been developed, principally on the part of parents.

Vermont.—On a written application from ten resident taxpayers of a town a portion of the school money, not exceeding 25 per cent, may be used to transport scholars who live $1\frac{1}{2}$ miles or more from school. That transportation is growing in favor is attested by the fact that the expenditure for this purpose increased from \$11,122 in 1893-94 to \$26,492 in 1899-1900. In 1899-1900 there were 726 schools closed all or part of the year and 2,909 pupils furnished transportation. There were still, however, in the last term 201 schools of 8 pupils or less each, a decrease of 84 from the preceding year.

Wisconsin.—The law now provides that any school district may make provision for closing its schools and sending its pupils to adjoining schools, and provide for the payment of tuition and transportation of pupils by taxation. (Wisconsin School Report, 1900, p. 17.)

There are 955 schools in the State having an average daily attendance of not more than 10. Professor Upham reports that there is no organized transportation of pupils, though three counties are contemplating it. (*Ib.*, p. 22.)

DISEASE IN SECONDHAND BOOKS.¹

Secondhand schoolbooks have found their way into nearly every neighborhood and school in Kentucky; so have smallpox and other contagious diseases. Scarcely a county in the State has escaped the ravages of this contagion, and in most instances the manner of its approach is mysterious and unknown.

It is a well-known fact that contagious diseases may be communicated through secondhand clothing or other articles of cotton or woolen goods used by patients afflicted with these diseases, unless such articles are thoroughly disinfected; nor does the disinfecting always destroy the germs of disease. This is true of secondhand books. While modern disinfecting is a great benefit, it does not always disinfect. Especially is this true of books. The outside may be thoroughly disinfected, and yet germs within—between the leaves—remain unharmed, unless the leaves, one by one, be subjected to the most careful fumigation. This process in itself would necessarily be so slow, and therefore expensive, that it would be cheaper to buy a new book than to sterilize an old one.

It is remarkable how long an old, soiled garment or an infected book will retain the germs of disease. The writer is well acquainted with a family that had smallpox twenty years ago; it was before vaccination was so extensively employed, and before the disease was so well understood by physicians as it is to-day. Every member of the family had the disease. When they had recovered, the house was disinfected well, it was thought, and the intense alarm in the village and surrounding country subsided. Twelve years passed; two other children were born into the family. The story of the smallpox and the terrible fright which it occasioned was almost forgotten, when the younger child, in his play, found some old yarn stockings which had been used by one of the family while he had smallpox, and which had been rolled up by nurse and put into an obscure corner of a closet. The child, not realizing danger, unrolled the garments. In a few days he had a well-developed case of smallpox. During the twelve years since the first attack in the family there had not been a case of the disease in the neighborhood, and the boy who contracted the disease in the manner just described had never been exposed to the disease in any way whatever prior to the time of finding the soiled garments. It is easy for disease germs, once in an old book, to be retained indefinitely, and finally communicated as readily as by an old garment.

Dr. A. J. Andrews, of Lexington, Ky., a graduate of the college of Physicians and Surgeons, New York City, director of the gymnasium of Kentucky University, and a practitioner of wide experience, says: "The use of secondhand books certainly might become a fruitful source of contagion. Pupils in our public schools should not be allowed to use secondhand books at all, especially when they do not know who used the books first, unless the books have been thoroughly disinfected; even then it is possible that some books will be overlooked. Better discard the use of them altogether. One case of smallpox, scarlet fever, or diphtheria may do more damage in a family or community than it is possible to repay by the savings on secondhand books in a lifetime."

¹ From the American Journal of Education, May, 1901.

Dr. J. B. Marvin, president of Kentucky University medical department in Louisville, and one of the most noted specialists in the South, says: "Experience of the medical world is in favor of contagiousness of smallpox, measles, itch, scarlet fever, and diphtheria, and the transmission of them through clothing, books, toys, etc. It is possible for these diseases to be communicated through the use of secondhand books. Pupils in our public schools should not buy and use a secondhand book used by a pupil while he had any of these diseases."

The boards of health in many of our cities are now investigating this question. County boards are looking into it also.

The Chicago Library board has a special committee at work on the subject of infected books now. The following is taken from partial report made by that committee as reported by the Chicago Tribune February 19, 1901: "All the books in the Chicago Public Library should be sterilized to prevent the spread of disease, according to the report of Dr. W. A. Kuflewski, submitted yesterday. Dr. Kuflewski was chairman of the special committee appointed by the library board two weeks ago to investigate the subject. He displayed several glass tubes containing countless germs taken from books in the library. He had examined 50 volumes, he said, and found them all more or less infected. He was convinced the books spread contagion." The committee was continued, and is now pushing its work.

Cincinnati is agitating the question, and at work on lines very similar to those of Chicago. The following clipping is taken from the Commercial-Tribune of January 22 last: "At the January meeting of the city hospital trustees, a letter was read from Dr. White, of the public library board, offering to deliver and return free of charge such books and periodicals as may be desired by the patients in the hospital."

The offer was promptly accepted at the time, and Messrs. Smith and Holmes were appointed a committee to confer with the library board to complete the arrangements.

Since then several meetings have been held, but nothing has been done toward putting the project into effect, because of the discussion which has arisen over consolidating the two libraries.

Many of the local practitioners believe the hospital library should be transferred to the building on Vine street, but they heartily oppose the free-delivery scheme. They say it would be a constant menace to the public health, and, as evidence, they cite innumerable instances where contagion has resulted from books exposed to infectious diseases, sometimes after a period of fifty years.

Books are considered one of the best natural cultures for disease germs known, and no mode of sterilization will cleanse them. This fact has been recognized by the health department for a long time. Where books have been exposed even to the atmosphere of rooms in which contagion has been present they have been promptly ordered destroyed.

Mr. Green, the president of the library board, said last night that such a thing as sending books from a circulating library to a hospital could not be thought of. "The health department would not permit such a thing to be done. Every day the library is furnished with a statement from the health department of the houses where are contagious diseases, and no books are issued on cards to the people living at the addresses given until the department gives consent."

Dr. Healy, the health officer of Lexington, in speaking to the writer regarding the danger of using secondhand books, said: "There can be no doubt that dirty secondhand books can convey contagious diseases. Some Chicago houses are buying them in States which have made recent adoptions. They rebind them and brush them up a little and sell them all over the country. I find that there is really no economy in buying them, as the difference in price of the secondhand and the new books is only about 10 cents per book, on an average. The saving is

too small, and the smallpox, measles, diphtheria, or scarlet fever taken from these books might do more damage than the savings of many years of their use would benefit us. I think our board of health will restrict the handling of such books by our dealers and regulate the secondhand schoolbook trade more carefully. We can't take the risk of leaving it altogether in the hands of the dealers."

It is also a fact that secondhand books are now sold in large quantities in nearly all our county seats and school towns, and there is hardly a country store that does not have them. These books have been gathered from every conceivable source; they have been used in the public schools of every race and color; they have been used by children of every degree of culture—from the best to the worst and most filthy—and when we permit a child to use such a book we have no way of knowing whose child used it first.

Kentucky has never had so much smallpox as within the last two or three years. Dr. McCormick, secretary of the State board of health, says that nearly every county in the State has had it. In some counties it has amounted to a fearful epidemic. A singular feature is that in so many places the disease seems to appear almost spontaneously; at least, the patient and physicians do not know where it came from. Even in counties having only a few cases it seems to be widely distributed.

No county has suffered a worse epidemic than Greenup. At one time nearly every neighborhood in the county had it. No county seems to have used more secondhand books in the country schools. A prominent educator of that county says: "Quite a number of secondhand books have been sold within the last few years. These books were bought of a firm in Chicago, whose agent told the dealers that the books came principally from Tennessee, when a change in books was made in that State."

It is a well-known fact that smallpox has been widely distributed over the State of Tennessee in recent years. This may be the source of the smallpox in Greenup County, and as for that matter, in many other localities throughout the State. What is true of smallpox is equally true of many other diseases. Besides the diseases mentioned above, it is well known that tuberculosis (consumption) is communicable by contact with the bacilli thrown off by the victims of this dread disease, and the secondhand book, better than almost any other medium, can harbor and communicate such germs to unsuspecting users of them.

Under the circumstances, is it wise, safe, or economical to allow the indiscriminate use of secondhand books in our public schools and homes? Should we take any such risks? The cost of books is one of the least of all the expenses of the student. Why take such hazard when so little is to be gained? Besides, the filth of the thing is repulsive to children and teachers of good breeding. If we could always know what child or children have used the books before us, the case would be different. But as it is, is it not almost as cleanly to wear the soiled garments of an unknown (probably diseased) person? What aesthetic, self-respecting child should be forced to use such books?

It is high time this state of affairs should come to an end.

COMPULSORY ATTENDANCE LAW VETOED IN MISSOURI.

The Missouri legislature passed in 1901 a compulsory attendance law, which was vetoed by the governor. Following is the text of the law:

AN ACT to enforce the constitutional right of every child in the State to an education, to provide for truant or parental schools and attendance officers in cities of ten thousand population or more, and to prohibit the employment of children during school hours.

Be it enacted by the general assembly of the State of Missouri, as follows:

SECTION 1. Every parent, guardian, or other person in the State of Missouri having charge and control of a child between the ages of eight and fourteen years

shall cause such child to attend regularly some day school, public, private, parochial, or parish, not less than three-fourths of the entire time the school which said child attends is in session, or shall provide such child at home or elsewhere with such regular daily instruction during the usual hours as shall be, in the judgment of a court of record having criminal jurisdiction, substantially equivalent at least to the instruction given the children of like age at said day school in the locality in which said child resides: *Provided*, That every parent, guardian, or person in the State of Missouri having charge and control of a child between the ages of fourteen and sixteen years who is not actually and regularly and lawfully engaged in some useful employment or service shall cause said child to attend regularly some day school as aforesaid.

SEC. 2. A child between the ages aforesaid may be excused temporarily from complying with the provisions of this act in whole or in part if it be shown to the satisfaction of a court of record that said parent or guardian or person having charge and control of said child is not able through extreme destitution to provide or obtain in any way proper clothing for said child, or that said child is mentally or physically incapacitated to attend school for the whole period required or any part thereof, or that there is no public school taught within two and one-half miles of the residence of said child by the nearest traveled road, or that the labor of said child is absolutely necessary for the support of the family, or that said child has completed the common school course as prescribed by constituted authority or its equivalent and has received a certificate of graduation therefrom.

SEC. 3. The board having charge of a public school in a city or district of three thousand or more population by the last census may appoint and remove at pleasure one or more attendance officers to enforce the provisions of this act and shall fix the compensation and manner of performance of the duties of said attendance officers and shall pay them from the public school funds: and the attendance officers as aforesaid shall serve written or printed notices upon the parents, or guardians, or persons who, having charge and control of children as aforesaid, violate the provisions of this act; shall, when reasonable doubt exists as to the age of any such child, require a properly attested birth certificate or an affidavit stating such child's age and date of birth and physical characteristics; shall have the right to visit and enter any office or factory or business house employing children as aforesaid; shall have the right to require a properly attested certificate of the attendance of any child or children at such day school; shall have power to arrest without warrant all truants and nonattendants as aforesaid and place them in some public school unless the parents or guardians or persons in charge and control of said children respectively shall at once place them in some other day school as aforesaid; and shall serve the legal notices and subpoenas of the court and make such required arrests in the cases which they prosecute without further fee or compensation than that paid by the board as aforesaid; and shall carry into effect such other regulations as may lawfully be required by the board appointing them.

SEC. 4. The board having charge of the public schools of any city or district having ten thousand or more population by last census may establish and maintain from the public school funds one or more ungraded truant or parental schools in such city or district, or any such board may at its discretion purchase land and maintain such schools, either within or without their own school districts, for children who are between the ages of eight and sixteen years, and who are either habitual truants from any day school in which they are enrolled as pupils, or who while in attendance at any school are incorrigible, vicious, or immoral in conduct, or who habitually wander or loiter about the streets or roads, or other public places without lawful employment; and all such children shall be deemed juvenile disorderly persons, and may by said school board, through its officer, or by a court having criminal jurisdiction in the city or district, be assigned to and required and compelled to attend such truant or parental school or any department of the graded school as such board or court may direct.

SEC. 5. Any parent or guardian or person who having charge and control of a child between the ages of eight and sixteen years, violates any provisions of this act shall be warned as aforesaid as soon as possible after the beginning of the public school term of the city or town or district in which such child resides, and also at any time thereafter by the attendance officer herein provided for, or by clerk of district when no attendance officer is provided for, to place and keep said child in regular attendance at some day school within ten days from the service of said written or printed notice of warning, and upon failing to comply with this act after a lapse of ten days from the date of service of said notice of warning, said parent or guardian or person having charge and control of said child shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not less than ten dollars and not more than twenty-five dollars, or be imprisoned

for not less than two days and not more than ten days, or both such fine and imprisonment: *Provided*, That said sentence of fine or imprisonment, or both, may be suspended and finally remitted by the court with or without the payment of costs at the discretion of the court if the said child be immediately placed and kept in regular attendance in some day school as aforesaid, and if such fact of regular attendance is proven subsequently to the satisfaction of said court by a properly attested certificate of attendance by the superintendent or teacher of said day school.

SEC. 6. Every board having charge of the public schools of any city or town or district in the State of Missouri shall, during the month of August of each year, publish this act in full for ten days in a newspaper published in the city or town or district or county in which the members thereof reside, or shall post copies thereof in ten or more public places as will in their judgment best give knowledge thereof to their constituents.

SEC. 7. No child between eight and fourteen years of age shall be employed in any mine, factory, workshop, mercantile establishment, or in any other manner during the usual school hours unless the person employing him shall first procure a certificate from the superintendent or teacher of the school he attended, stating that such child attended school for the period required by law, or has been excused from attendance as provided in section two; and it shall be the duty of such superintendent or teacher to furnish such certificate upon application of the parent, guardian, or other persons having control of such child entitled to the same.

SEC. 8. Every owner, superintendent, or officer of any mine, factory, workshop, or mercantile establishment, and any other person who shall employ any child between eight and fourteen years of age contrary to the provisions of this act shall be deemed guilty of a misdemeanor, and upon conviction shall be fined for each offense in a sum not less than twenty nor more than fifty dollars and costs.

SEC. 9. Prosecutions under this act shall be brought in the name of the State of Missouri, before any court of record having criminal jurisdiction, and the fines collected shall be paid over to the county treasurer and be credited to the permanent school fund of the county or city.

SEC. 10.¹ The provisions of this act are hereby suspended in the several counties in this State until a majority of the legal voters of any county voting at any general election shall decide to enforce same in such county, provided that only a majority of the legal voters voting on said question shall be necessary to decide its adoption or rejection, the question having been submitted by the county court on a petition of one hundred qualified voters.

a Statistics of high and normal schools. Average enrollment in the normal school, 226 pupils.

b Includes \$39,853.31, proportion of general expenses.

WOMEN IN SCHOOL ADMINISTRATION.

There are at present 2 women holding the position of State superintendent of schools, 12 that of city superintendent, 234 that of county superintendent. The status of women in respect to directive influence in school affairs is tersely summarized as follows:

Women may hold any school office in Connecticut, Idaho, Illinois, Indiana, Louisiana, Minnesota, North Dakota, Oregon, Pennsylvania, South Dakota, and Wyoming. Women may be county superintendents in Kentucky (if holding a State teacher's diploma), Montana (district offices also), Tennessee, and Wisconsin (city, town, and district offices also). Women may be commissioners and school district officers in New York.

Women may be local town or district officers in Arizona, California, Colorado, Iowa (where a woman must be a member of the State educational board of examiners), Maine, Massachusetts, Michigan, Nebraska, New Jersey, Ohio, and Vermont.

Women have like suffrage with men in Colorado, Idaho, Utah, and Wyoming. They may vote (1) on general school questions in Minnesota (at any election or at any district meeting), in North Dakota, and South Dakota; (2) on local school questions in Arizona, Iowa (on issue of bonds or increase of tax levy), Kansas, Kentucky (if widowed parents or guardians or spinster guardians of school children), Michigan, Nebraska, New York (if parents and taxpayers), Montana (at district elections), New Hampshire, New Jersey (restricted from voting for members of boards of education), Ohio (for members of boards), Oregon (widows with children to educate and taxpayers), Vermont (on all questions pertaining to schools), Washington (for directors), and Wisconsin.

Women State superintendents of public instruction.

SUMMARY OF LAWS RELATING TO COMPULSORY EDUCATION AND CHILD LABOR IN THE UNITED STATES.¹

[Issued by the Chicago Association of Collegiate Alumnae, February, 1901.]

The compulsory education law of Illinois requires children between the ages of 7 and 14 years to attend school for sixteen weeks during the year. The Illinois child-labor law forbids the employment for wages of children under the age of 14 years. The joint operation of these laws makes it possible for children who have complied with the school requirement of sixteen weeks' attendance, but who are without proper home restraint, to spend their time on the streets for the rest

¹ Report of the United States Commissioner of Education for 1897-98; Report of the United States Industrial Commission on Labor Legislation, 1900; Labor Laws of the United States, and Bulletins of the Department of Labor.

of the year. Since they may not work and need not go to school, they are necessarily left to the demoralizing influences of idleness, often under vicious surroundings. The effect of such a life on children in a great city is shown in the statistics of juvenile crime. Mr. Riis has said: "Three-fourths of all juvenile delinquency in New York is the result of truancy, the street life of children."

A similar assertion might be made of Chicago. The discrepancy between the compulsory education and child-labor laws, which is in part responsible for the present state of things in Illinois, has become the subject of serious consideration on the part of many persons interested in juvenile reform, among them some of the women's clubs of this city and State. A lengthening of the compulsory school term (at least in cities), so that the school period will correspond more nearly with the period during which employment is forbidden, seems to be the remedy needed. The citizens' educational commission of the civic federation has passed a recommendation for an increase of the compulsory school term from sixteen weeks to twenty-six weeks, and it is expected that this recommendation will be embodied in a bill which the commission is to present to the legislature this winter.

In view of the fact that conflicting opinions are held as to the details of the proposed legislation, it has been thought that a comparative study of such legislation in other States might prove helpful. The accompanying table has accordingly been prepared. By reason of the close connection between the two subjects, the main points of the child-labor laws in States having such laws have been included with the provisions on compulsory education.

MADELEINE WALLIN SIKES,
Chairman Committee on Educational Legislation,

COMPULSORY EDUCATION.				CHILD LABOR. ¹	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor. ²
Illinois	7-14	16 weeks; 6 consecutive. Time to commence with beginning of first term of school year for pupils under 10 years of age, and not later than December 1 of said year for pupils over 10.	\$1 to \$5 and costs; stand committed till paid. Penalty for false statements as to age or attendance, \$3 to \$20.	14 years, in any mercantile institution, store, office, laundry, manufacturing establishment, factory, workshop, or mine. Girls may not work in mines at any age. Certificate of age required under 16. ³ 10 years, in mines 21 years, in barrooms 14 years, in mines	
Alabama					
Alaska					
Arkansas					
California	8-14	Two-thirds of full term; 12 weeks consecutive.	First, not exceeding \$20; subsequent, \$20 to \$50, with costs.	10 years, in any factory, workshop, or mercantile establishment. Certificate of age required under 16.	Children under 16 years, unable to read and write, may not be employed in mines.
Colorado	8-14	12 weeks; 8 consecutive.	\$5 to \$25	14 years, in any underground work, mine, smelter, mill, or factory; 12 years, in coal mines (boys). No girl may be employed in coal mines.	Children under 14 years, unable to read or write, may not be employed in any business during school hours unless they have attended school a prescribed period during the year; under 16, unable to read and write, may not be employed in mines.
Connecticut	4-16	Full term	Not exceeding \$5	14 years, in any mechanical, mercantile, or manufacturing establishment.	Children under 14 must have attended day school a prescribed period. Between 14 and 16, provisions similar to Maine and Massachusetts.
District of Columbia.	8-14	12 weeks; 6 consecutive.	Not exceeding \$20.	Children under 15 may not be employed more than 60 days without consent of legal guardian.	
Florida					
Idaho	8-14	12 weeks; 8 consecutive.	First, not less than \$3; subsequent, \$10 to \$50, with costs.	14 years, in mines (constitution of State).	
Indiana	8-14	12 consecutive weeks	\$10 to \$50, and, in discretion of court, imprisonment 2 to 90 days.	14 years, in any manufacturing or mercantile establishment, mine, quarry, laundry, renovating works, bakery, or printing office. Certificate of age required under 16.	Children under 16, unable to read and write English, may not be employed in foregoing employments except in vacation of public schools.
Iowa				12 years, in mines (boys)	

Kansas -----	8-14 12 weeks; 6 consecutive -----	First, \$5 to \$10; subsequent, \$10 to \$20.	12 years, in coal mines -----	Same as Arkansas; and must have attended school 3 months in this year.
Kentucky -----	7-14 8 consecutive weeks -----	First, \$5 to \$20; subsequent, \$10 to \$50.	Constitution requires laws fixing minimum age for child labor in "places dangerous to life or health, or injurious to morals." No such laws are found.	
Louisiana -----	-----	-----	12 years (boys), 14 (girls), in any factory, warehouse, or work-shop.	Children under 14 must not be employed in foregoing employments, or in clothing, dress-making, or millinery establishments, nor by itinerant musicians, unless they have attended school 4 months in preceding year.
Maine -----	8-15 16 weeks; 2 terms of 8 weeks, if practicable.	Not exceeding \$25.	12 years, in any manufacturing or mercantile establishment. Certificate of age required under 16. Under 13, this certificate must state school attendance.	Children under 15 shall not be employed in any manufacturing or mercantile establishment, except during vacation, unless they have attended school 16 weeks during preceding year. Such school attendance must continue during employment.
Maryland -----	-----	-----	12 years, in mills and factories (except canning establishments). 16 counties exempt from law. Law applies to shops and mercantile establishments in Baltimore.	
Massachusetts -----	7-14 Full term -----	Not exceeding \$20.	14 years, in factories, workshops, or mercantile establishments; 14, in any other employment for wages during school hours; 18 years, handling intoxicating liquors (except in drug stores). Certificate of age required under 16.	Children under 14 (see preceding column); over 14, who can not read and write English, shall not be employed where there is an evening school unless they attend the same.
Michigan -----	8-14 16 weeks; 6 consecutive -----	First, \$5 to \$10; subsequent, not less than \$10; incorrigible, \$10 to \$20, or penal bond of \$100.	14 years, in manufacturing establishments. Certificate of age required under 16. (Law does not apply to canning or evaporating works).	Children under 16, unable to read and write, may not be employed in manufacturing establishments.

¹ No attempt has been made in this table to note the States regulating the hours of labor of minors where labor is permitted. Such regulations are now very general, exceptions being some of the extreme Western States and the Northern States generally. Illinois prohibits more than sixty hours of labor in any one week, or more than ten hours in any one day, for persons over 16 years.

² Statistics on this subject in the report of the Industrial Commission, from which this table was compiled, are not complete for all the States. The provisions are varied and complicated, and can be exactly ascertained only by reference to the statutes of each State.

³ This certificate must contain: Name, place, and date of birth of child; in New York and Massachusetts and some other States, a statement of school attendance, personal description of the child, and other data.

⁴ Not applicable to children over 14 lawfully employed and not enrolled at school.

⁵ To 16, if wandering about public places without lawful occupation.

COMPULSORY EDUCATION.				CHILD LABOR.	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Minnesota	8-16	12 weeks: 6 consecutive	First, \$25; subsequent, \$25 to \$50.	14 years; in factories, workshops, or mines; 14 years, in mercantile establishments, telegraph, telephone, or public messenger companies, except during vacation of public schools; 16 years, in any occupation dangerous to life, limb, health, or morals.	Children under school age (16 years) may not be employed in any occupation unless they have attended school the prescribed period; under 16, unable to read and write English, may not be employed in any indoor occupation (except in vacation) unless attending day or evening school.
Mississippi				Children under 21 (boys), under 18 (girls), may not be employed away from home without consent of legal guardian.	
Missouri				14 years, in manufacturing or mechanical establishments, or where work would be dangerous to health of child.	
Montana	8-14	12 weeks: 6 consecutive	\$5 to \$25.	14 years, in mines.	Children under 14, in foregoing employments (provisions similar to Maine.)
Nebraska	8-14	12 weeks	\$10 to \$50.	10 years, in manufacturing, mechanical, industrial, or mercantile establishments; under 12 years, not more than 4 months in the year in railroad shops, factories, shops, or mines. Certificate of age under 16 years.	
Nevada	8-14	16 weeks: 8 consecutive	First, \$50 to \$100; subsequent, \$100 to \$200, with costs.	10 years in any manufacturing establishment.	Children under 16 (provisions similar to Maine and Massachusetts.)
New Hampshire ..	8-16	12 weeks: 6 consecutive	First, \$10; subsequent, \$20		
New Jersey	7-12	20 weeks: 8 consecutive	\$10 to \$25, or imprisonment 1 to 3 months.	14 years (girls), 12 years (boys), in factories, workshops, mines, or manufacturing establishments.	Children under 15 may not be employed in any business whatever unless they have attended school for 12 consecutive weeks in preceding year.
New Mexico	8-16	12 weeks	\$1 to \$25, or imprisonment not exceeding 10 days.		

New York.....	8-16	Full term (October 1 to June 1) between ages of 8 and 12; 80 days between ages of 12 and 14; when unemployed between 14 and 16.	First, not exceeding \$5; subsequent, not exceeding \$30, or imprisonment not exceeding 30 days, or both fines and imprisonment.	"14 years, in factories, and in mercantile establishments in villages and cities over 3,000 inhabitants. Certificate of age, school attendance, etc., required under 16.	Children under 16 (provisions similar to Massachusetts); but children over 14 and over 12 who can read and write English may be employed in factories and mercantile establishments, respectively, during vacation, without complying with the school requirements in other respects.
North Carolina.....				Under 21, may not be employed out of State without consent of legal guardian.	
North Dakota.....	8-14	12 weeks; 6 consecutive	First, \$5 to \$20; subsequent, \$10 to \$30, with costs.	12 years, in mines, factories, and workshops (constitution of State).	Children under 14 may not be employed in any manner during school hours unless they have attended school 12 weeks during the year.
Ohio.....	8-14	20 weeks; 10 consecutive, city; 16 weeks; 8 consecutive, other districts.	\$5 to \$20, or penal bond of \$100; on refusal, imprisonment from 10 to 30 days.	13 years, in factories, shops, mercantile, or other establishments; 15 years, in mines.	Boys under 15 and girls under 16 may not be employed during school hours (household work excepted).
Oregon.....	8-14	12 consecutive weeks	First, \$5 to \$25; subsequent, \$25 to \$50, with costs.	13 years, in factories, manufacturing or mercantile industries, laundries, workshops, renovating works, or printing offices; 14 years in mines (boys); girls may not work in mines; 12 years, in bituminous mines.	Children under 16 may not be employed in the foregoing "or other industrial establishments" unless they can read and write English, or have attended school 16 weeks in preceding year.
Pennsylvania.....	2 8-16	70 per cent of the term.....	First, not exceeding \$2; subsequent, not exceeding \$5.	Certificate of age required under 16.	Children under 15 (provisions similar to Maine and Massachusetts).
Rhode Island.....	7-15	80 days, and when unemployed.	Not exceeding \$30.....	12 years, in factories, manufacturing or mercantile establishments. Certificate of age required under 14.	Same as North Dakota.
South Dakota.....	8-14	12 weeks; 6 consecutive	\$10 to \$20 and costs; stand committed till paid.	14 years, in mines.	
Tennessee.....				12 years, in workshops, mills, factories, or mines.	
Utah.....	8-14	20 weeks; 10 consecutive	First, not exceeding \$10; subsequent, not exceeding \$30, with costs.	14 years, in mines (constitution of State); girls may not work in mines.	
Vermont.....	8-14	20 weeks	\$5 to \$25.....	16 years, in manufacturing or mechanical establishments.	Children under 14 (provisions similar to Maine and Massachusetts).

¹ Many States (among them Illinois) forbid occupations dangerous to the life or health of children, or permit them only under restrictions. (However, in Illinois, only "extra hazardous" occupations are forbidden.) A majority of the States forbid the employment of children under a certain age in begging, singing, theatrical exhibitions, etc.

² Not applicable to children over 13 regularly employed in useful service.

COMPULSORY EDUCATION.				CHILD LABOR.	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Washington.....	18-15	12 weeks	\$10 to \$25; defective children, \$50 to \$200.	14 years, in mines (boys); girls may not work in mines.	Children under 15 may not be employed in manufacturing, mechanical, or mercantile establishments, or by telegraph or telephone companies (except in vacation) unless they have attended school a prescribed period the previous year, or have attained reasonable proficiency in common branches. Such attendance to continue during employment).
West Virginia.....	8-14	16 weeks	First, \$2; subsequent, \$5	12 years, in mines, factories, workshops, manufactories, or establishments where goods or wares are manufactured.	
Wisconsin.....	7-13	12 weeks	\$3 to \$20	14 years, in mines, factories, or workshops; 14 years, in mercantile establishments, laundries, or in telegraph, telephone, or public messenger service, except in vacation of public schools. Certificate of age required under 16 (but county judge, commissioner of labor, factory or assistant factory inspector may exempt any child over 12 from this act, where labor is necessary to support).	
Wyoming	20-21	12 weeks	Not exceeding \$25.	14 years, in mines (constitution of State); girls may not work in mines.	
United States laws (for Territories).				12 years, in the underground workings of any mine.	

¹ 16 to 21, in case of defective children.

² Penalty only for child 7 to 16, or one living idly and loitering about public places.

FREE TEXT-BOOKS.

The following extracts from the laws of the various States regarding free text-books are taken from Chapter XIX of the Report of the Commissioner of Education for 1897-98:

In certain States the text-books are regularly furnished free to pupils. These, with the units bearing the expense, are Delaware (district), District of Columbia (below high schools), Idaho (district), Maine (town), Maryland (county), Massachusetts (town), Nebraska (district), New Hampshire (town), New Jersey (school corporation), Pennsylvania (school corporation), Rhode Island (town).

In New York (rural) district boards furnish indigent pupils; (union school district) boards of education are authorized to furnish books "to pupils out of any money provided for the purpose," but no mode of providing money is indicated.

In the following States, where books are usually individual property, local authorities have legal sanction for supplying the use of books free to indigent pupils, obligatory in all except Illinois and Missouri, where it is permissive: California (district); Illinois (district); Indiana (township); Kentucky (county); Missouri (district); Montana (district), Nevada (district); New Mexico (district); Virginia (district); Washington (district).

In certain States free text-books are furnished irregularly on local popular vote—local option, as it might be called. These are Colorado (district); Connecticut (town); Iowa (district); Kansas (district); Michigan (district); Minnesota (district); North Dakota (district); South Dakota (district); Vermont (town); Wisconsin (district).

Particulars for the individual States mentioned are as follows:

California, 1895.—By law of 1895 and authorization of later laws, the State board of education, consisting of the governor, State superintendent, and principals of State normal schools, has compiled, or caused to be compiled, for the common schools these text-books: Readers, spellers, arithmetics, grammars, United States histories, geographies, text-books on physiology and hygiene, including a system of gymnastic exercises, and special instructions as to the nature of alcoholic drinks and narcotics and their effect upon the human system.

Whenever any one or more of the State series of school text-books shall have been compiled and adopted, the State board of education shall issue an order requiring the uniform use of said book or books in the common schools of the State, * * * and no school board or other school authority in this State shall have the power to authorize the use of any * * * books as text-books other than those directed to be used by the order aforesaid of such State board, except books on such subjects as are not provided for by text-books published by the State.

The printing of these text-books is done under the superintendent of State printing at the State printing office.

All orders for text-books are to be made on the superintendent of public instruction, accompanied by cash in payment at the price fixed by the State board of education as the cost price at Sacramento, and the cost of postage if to be shipped by mail.

The following persons are entitled to order books:

(1) County superintendents of schools for the use of teachers, parents, and pupils in their counties only.

(2) Principals of State normal schools for their (use) and for the use of the pupils in their respective schools only.

(3) The secretary or clerk of any school district in the State for the use of the pupils in such district only; but no books ordered by the county superintendents or clerks of district boards of trustees or principals of normal schools shall be sold

at a price exceeding the cost price at Sacramento, with the actual cost of freight and cartage added.

(4) Any retail dealer who first transmits to the State superintendent of public instruction an affidavit pledging himself not to sell the books to be sold again, or to any person beyond the limits of the State, or at a price exceeding the price to the pupil fixed by the State board of education.

The boards of supervisors of the counties are required to provide a revolving fund to enable the county superintendent to purchase the State text-books; all moneys taken therefrom to be replaced by the moneys received from the sale of books by himself, teachers, or clerks of boards.

All schoolbooks compiled by the State must be furnished to the public school children of the State at the cost of printing, publishing, and distributing the same, the cost of distribution taken to be the cost of postage required for mailing each book. (Act of 1887.)

School boards must furnish books for the children unable to purchase them, the books remaining district property and kept in the district library when not in use.

Illinois, 1897.—The district directors determine what branches of study shall be taught and what text-books be used, and they are required to enforce uniformity and permit no change oftener than once in four years. They have power to purchase, at the expense of the district, text-books to supply indigent children by loan.

Indiana, 1897.—The State board of education, consisting of the governor, State superintendent, presidents of the State university, Purdue University, the State normal school, and superintendents of schools of the three largest cities, was authorized in 1889 to invite proposals: (1) From publishers for furnishing books to the school trustees of the State for a term of five years; (2) from authors who have unpublished manuscripts; (3) from parties ready to undertake the compilation of the required books.

The subjects prescribed were: Spelling, reading, arithmetic, geography, English grammar, physiology, history of the United States, and a graded series of writing books.

Books are supplied under contracts with publishers.

The State is expressly protected from any liability to the contractors, who receive their pay solely from the proceeds of sales upon a plan as follows: Every school corporation certifies to the county superintendent (appointed by township trustees of the several townships) the number of the respective books required in its schools. The county superintendent makes requisition upon the (elected) State superintendent, who makes requisition upon the contractor, who within ninety days ships the books to the county superintendent. The latter notifies the local trustees, who take the books certified by them as needed and furnish them to the school patrons or school children of the corporation at the contract price for cash only, except that the corporation furnishes necessary books to indigent children, who would otherwise be unable to attend school. Any child 6 to 21 years of age, and any parent, guardian, or teacher of such child, may buy at contract price from the county superintendent, who makes separate requisition on the contractor for these books.

Kentucky, 1896.—The county board of examiners, consisting of the county superintendent in each county, fixes a list, with publisher's guaranty, not to be changed for five years. Penalty for accepting anything of value for influencing choice, fine of \$500 and removal from office; for offering it, fine of \$500.

The (elected) county superintendent ascertains from trustees and teachers and otherwise the number and cost of text-books in each branch needed by indigent children in the county, and on his report to the county judge the latter is required to purchase them from an allowance, not to exceed \$100 per annum in any county, and turn them over to the county superintendent for distribution.

Missouri, 1897.—The State auditor, attorney-general, (elected) superintendent of public instruction, president of the State normal school at Kirksville, and one

practical public-school teacher appointed by the governor constitute a schoolbook commission.

This commission, upon bids submitted, made contracts for books to be supplied for five years from September 1, 1897, to be used exclusively after September 1, 1898.

The books are furnished through dealers or by mail at guaranteed prices: (1) contract; (2) retail; (3) mailing.

Any director or board of directors permitting any other text-book to be used in the same branches and the same grades as the contract list is deemed guilty of a misdemeanor and is subject to a fine of \$5 to \$25 for each offense; but supplementary reading may be used when furnished without expense to pupils and without displacing any contract book.

Districts furnish indigent children from the contingent fund.

The act does not apply to cities having a population of 50,000 or over.

Montana, 1895.—The State board of education, consisting of the governor (elected), State superintendent of public instruction, attorney-general, ex-officio members, and eight appointed by the governor, recommends to the legislature a uniform series of text-books to be used in the public schools below the high schools.

The State superintendent prepares lists of publications suitable for school libraries, with prices. He prescribes a course of study for all public schools.

Local school boards provide books for indigent children; require all pupils to be furnished with suitable books as a condition of membership in school; determine what branches shall be taught additional to those required by law, subject to approval by the (elected) county superintendent.

Nevada, 1897.—The State board of education, consisting of the governor (elected), superintendent of public instruction, and president of the university, prescribes a uniform series of text-books in the principal studies pursued in the public schools, including temperance lessons, not to be changed oftener than once in four years. Text-books in algebra, geometry, drawing, natural history and philosophy, astronomy, and elements of bookkeeping are prescribed, as well as those for common English branches.

Penalty for failure to use the books of the list is forfeiture of the district's share of public-school moneys.

The boards of school trustees furnish indigent children, holding the books as district property.

New Mexico, 1895.—The Territorial board of education, consisting of the governor and the presidents of the university at Albuquerque and the Agricultural College at Las Cruces, is empowered to adopt a system of schoolbooks for exclusive use in the public schools of the Territory. It has power to contract with publishers, through the superintendent of public instruction (appointed by the governor, by and with the advice and consent of the council), for purchase and delivery of books.

The books purchased in the name of the Territory shall be sold to the counties for cash only, at cost and freight, with 5 per cent added for necessary expenses. Accounts are settled by the superintendent of public instruction on the 10th of each month, and a full settlement is made between the Territory and contractors semiannually, March 1 and September 1. No change is to be made for four years from adoption. Penalty: Any teacher, school officer, or county superintendent violating the rules of the board is deemed guilty of a misdemeanor, and is subject to a fine of from \$10 to \$100. Indigents are furnished with books by district boards.

Ohio, 1897.—A commission, consisting of the governor, secretary of state, and (elected) State commissioner of common schools, fixes maximum prices on books offered through proposals filed in the office of the commissioner of common schools and confirmed by agreement for five years. It is unlawful for any board of education to adopt or cause to be used any book not filed as above.

Publishers failing to maintain the supply as provided are to have the book in question permanently rejected and to pay \$500 for each failure, which sum is to go to the common-school fund of the State.

The State commissioner of common schools in the first half of June, annually, notifies boards of education regarding the publishers whose guaranties are filed. On the third Monday of August, or at an adjourned meeting within two weeks, each board elects the studies to be pursued and the books to be used in the schools under its control. No text-book so adopted is to be changed, nor any part altered or revised, nor any other text-book substituted for five years from adoption without consent of three-fourths of the members elected given at a regular meeting.

Each board, at regular meetings in April and August, is to determine the kind and number of books required in its schools for next six months, and cause an order to be drawn for the amount in favor of the clerk of the board; the clerk then orders the books from the publisher, the board paying transportation charges from the contingent fund.

The board has authority to arrange for the care and sale of the books to pupils of school age at not exceeding 10 per cent advance on the cost. The board may contract with local dealers to furnish books at rates above indicated, the board being responsible to the publishers for all books purchased by the board. When pupils remove from any district to a district using other books, and wish to dispose of their books, the board of the district from which they remove is authorized to purchase their books at a fair valuation and resell them. The local board furnishes indigent pupils by loan.

Virginia, 1892.—Uniformity of text-books and the furnishing of schoolhouses with such apparatus and library as may be necessary shall be provided for on some gradual system by the (State) board of education. The two works of John Esten Cooke, entitled, respectively, *Virginia; A History of Her People, and Stories of the Old Dominion*, shall be included in the list of text-books.

The State board of education, consisting of the governor, superintendent of the public instruction (elected by the general assembly), and attorney-general, made contracts with publishers by which a series of books became established for four years from August 1, 1894. The board prescribed that counties and cities could change during the four years from other books in use, but must keep the newly adopted books four years from adoption, if continued so long on the list of the board. Every pupil is required to be supplied with proper books before admission to any school. City and county superintendents (appointed by the State board of education and confirmed by the senate) are charged with securing arrangements for having supplies of the adopted books within easy reach at stipulated prices.

School districts provide books for indigent pupils.

Washington, 1893.—The State board of education, consisting of four suitable persons, two being teachers in the common schools, appointed by the governor, by and with the advice and consent of the senate, together with the superintendent of public instruction, is authorized to adopt a uniform series of books for the common schools, not to be changed for five years except on failure of publishers to comply with their contract.

City boards of education may adopt books additional to those prescribed by the State board, but make no changes within five years of adoption, and they provide books for indigent children.

All children are required to be supplied with the prescribed books as a condition of membership in the schools.

Any district using text-books other than those prescribed, or failing to comply with the course of study prescribed by the board of education, forfeits 25 per cent of its school fund for that year.

STATES IN WHICH SCHOOLBOOKS ARE, OR MAY BE, PUBLIC PROPERTY.

In the following States provision is made, obligatory or permissive, for furnishing the use of text-books free to pupils, for sake of brevity called free text-books.

Colorado, 1893.—Each school board * * * shall have power, and it shall be their duty, * * * to fix the course of study, the exercises, and the kind of text-books to be used: *Provided*, That but one kind of text-book of the same grade or branch of study shall be used in the same department of a school, and that after the adoption of any book it shall not be changed in less than four years, unless the price thereof shall be unwarrantably advanced or the mechanical quality lowered or the supply stopped.

To provide books for indigent children, on the written statement of the teachers that the parents of such children are not able to purchase them, and to furnish free text-books for the use of all pupils when authorized to do so by a majority vote of the district as expressed at any regular or special meeting.

To require all pupils to be furnished with the proper and suitable books as a condition of membership in school.

Connecticut, 1895.—The State board of education, consisting of the governor, lieutenant-governor, and four persons appointed by the general assembly, may direct what books shall be used in all its (State) schools, but shall not direct any book to be changed oftener than once in five years. (Sec. 10.)

Any town, at its annual meeting, may direct its school visitors or board of education or town committee to purchase, at the expense of said town, the text-books and other school supplies used in the public schools of said town, and said text-books and supplies shall be loaned to the pupils of said public schools free of charge. (Sec. 53.)

Delaware, 1893.—By the law of 1885 the State board of education, now composed of the governor, secretary of state, and the three superintendents of the counties appointed by the governor, meets every five years to determine what changes shall be made in the text-books to be used in the said free schools, and no change shall be made in any text-books to be used in the said free schools except at the meetings to be held every five years as directed by this act.

By act of 1891, on and after the first Saturday in April, A. D. 1891, the school commissioners or trustees of each school district or districts in the State shall furnish the necessary text-books free to all the pupils enrolled in the free schools of the State in the manner hereinafter provided.

The school commissioners or trustees shall order from the publisher or publishers the books which have been adopted by the State board of education at the net contract prices at which the publishers have agreed to supply the same. (Sec. 2.)

It shall be the duty of the clerk of each school district to distribute the books received to the scholars or their parents, guardians, or other person, as they desire, upon receipt for the same. The clerk shall be responsible for the safe-keeping of the books furnished him and also for prices of books sold. (Sec. 3.)

It shall be the duty of the school commissioners to provide for the safe-keeping and care of the books returned by the pupils at the close of the annual term to the clerk. The school commissioners may furnish books at cost to pupils who wish to replace books lost or willfully destroyed or who may wish to own their books, and shall turn the proceeds into the school fund of the district. (Sec. 4.)

It shall be the duty of every teacher to hand to the commissioners of the district, at the end of each quarter, an inventory of the books in the school belonging to the district, stating by whom such books are held, their condition, and the number of and by whom books have been destroyed. Until such report shall have been made it shall not be lawful to pay such teacher his or her salary. (Sec. 5.)

The text-books for the colored schools of the State shall be ordered by the county superintendents of the respective counties through the county treasurer of each county. (Sec. 7.)

District of Columbia, 1898.—In recent years books have been supplied by loan, free, to pupils below the high schools through specific appropriations made by Congress, upon which the District depends for its legislation.

Idaho, 1897.—A State board of text-book commissioners, consisting of the president of the university, the State superintendent of public instruction, and three others engaged in educational work, appointed by the governor, after proposals for furnishing books, free on board cars, were received for a term of six years from September 1, 1893, selected a series of books for exclusive use in the State.

The chairman of each board of trustees in a county forwards to the (elected) county superintendent a list of the books needed. The county superintendent makes the necessary orders to the State superintendent, who orders from the contracting publishers and, on receipt, distributes to the county superintendents. All payments to county superintendents are forwarded to the State treasurer, who is charged with settlement of bills of contractors.

By amendatory act of 1897 the trustees purchase, at the expense of the district, all text-books used in the public schools, to be either loaned to the pupils free of charge or sold at cost to any pupils of the district for cash only. The clerk is custodian and must deposit a detailed monthly statement of accounts and of the condition of books.

Iowa, 1897.—The board of directors of each school corporation is empowered to adopt text-books for the teaching of all branches taught, and to contract for and buy said books and to sell the same to the pupils of their respective districts at cost. The board may select one or more persons within the county to keep said books for sale, under bond. All the books purchased under the provisions of this chapter shall be paid for out of the contingent fund.

The books are selected after advertisement for proposals. Contracts are made for five years. The publishing contractors give bonds.

The (elected) county superintendent, the county auditor, and the members of the board of supervisors constitute a county board of education. On petition of one-half the school directors of a county, outside the cities and towns, asking for a uniform series of text-books in the county, the board provides for submitting the question of county uniformity of text-books to the electors at the next annual meeting. If a majority of the electors voting vote affirmatively, the county board selects the text-books for the entire county and contracts for the same. The list adopted is obligatory upon all public schools of the county except in the cities and towns, which may adopt the same books if they so choose. The board of education may arrange for depositories and pay for the books out of county funds, to which proceeds of sales are returned. On petition of one-third or more of the legal voters in any school corporation the question of providing free text-books is submitted to the voters at the annual meeting, notice thereof being in the call for the meeting.

If a majority of the legal voters present and voting favor it, the board procures the books, by selection and contract as above, and loans them to pupils, who are held responsible for damage or loss, but are permitted to buy any text-books used in the school at cost. The electors, by like steps, can secure the discontinuance of loaning text-books to pupils.

District boards may furnish school books to indigent children when they are likely to be deprived of the proper benefits of school unless so aided.

Kansas, 1897.—A school text-book commission of eight members, appointed by the governor, by and with the consent of the senate (not more than three members being of the same political party), with the State superintendent ex officio chairman, for four years from the first Monday in April, 1897, was authorized to select and adopt a uniform series of school text-books for use in the public schools in the

following-named branches: Spelling, reading, arithmetic, geography, English grammar, physiology and hygiene, history of the United States, civil government, elements of algebra and physical geography, elements of natural philosophy, bookkeeping, and a graded series of writing books.

Bids were invited from publishers for furnishing books for five years from September 1, 1897; also from authors of unpublished manuscript; also from persons willing to compile books. The law defines the maximum prices and provides for exchanges to secure uniformity.

After the annual school meeting each clerk is required to transmit an estimate of books required to the county superintendent, who sends a requisition on the publishers for books needed for the county. By a two-thirds majority of the legal electors any board may buy the necessary books from the incidental funds, retain the ownership, and furnish the use free to pupils.

Maine, 1895.—Towns shall provide schoolbooks for the use of the pupils in the public schools at the expense of said town: Provided, however, that any parent or guardian of any pupil in the public schools may, at his own expense, procure for the separate and exclusive use of such pupil the text-books required to be used in such schools.

Maryland, 1896.—Schoolbooks shall contain nothing of a sectarian or partisan character.

The board of public school commissioners of Baltimore City and each board of county school commissioners shall adopt and purchase text-books for use in the public schools of said city and of the several counties in the State as such new text-books are required, and when so procured the necessary text-books shall be furnished free of cost for use in the public schools of the State, subject to the order of said boards, but said boards shall have the right at any time to change any series of text-books already in use or hereafter adopted; provided, that text-books shall be furnished under the provisions of this act to the several grades in the public schools successively, beginning with the first grade; and provided, that said boards shall not be required to expend during any school year for said text-books more than the several amounts of money received by said boards, respectively, under the provisions of this act; and provided, that indigent pupils of all grades shall receive text-books free of cost, as provided under the provisions of existing laws; and provided, the said respective boards shall adopt such means for the purchase of text-books by competitive bidding, as far as is practicable, and at the lowest possible price; and provided, that parents or pupils may purchase their own text-books when they think proper. The details of titles, publishers, and prices are reported to the State board of education and set forth in full in its annual report.

The said several boards shall provide for the issuing, safe-keeping, care, and return of the same.

Massachusetts, 1895.—Chapter 103 of the acts of 1884 provides that the school committee of every city and town shall purchase, at the expense of such city or town, text-books and supplies used in the public schools; and said text-books and supplies shall be loaned to the pupils of said public schools free of charge, subject to rules of the committee.

The school committee directs what books shall be used, and prescribes, as far as practicable, a course of studies and exercises.

The committee must require the daily reading of some portion of the Bible, without written note or oral comment. It is recognized as fulfilling the requirement of law that the teacher shall read the Bible as part of the morning devotional service without requiring every pupil to do so. (Pub. stat. rel. to pub. inst., 1892, with annot. and expl., p. 46.)

Michigan, 1893.—The district board specifies the studies to be pursued in its

schools and selects the text-books, including those with the temperance lessons, approved by the State board of education. Text-books adopted are not to be changed for five years except by consent of a majority of the qualified voters present at an annual meeting or a special meeting called for the purpose.

The district board is authorized to purchase, at district expense, books necessary to supply indigent pupils.

On a majority vote, at an annual meeting with specified previous notice of the vote, the district board shall purchase the necessary books, to be the property of the district and loaned to pupils, providing that individuals may buy their books from the board, and that the question of free text-books may be revived at later annual meetings. The books are bought after proposals through contracts.

Officers neglecting, to proceed after vote of the district for free text-books are deemed guilty of misdemeanor and liable to a fine not more than \$50, with or without imprisonment in the county jail not exceeding thirty days.

Minnesota, 1897.—The board of trustees or board of education of each and every school district is empowered to select, adopt, or contract for the text-books needful for the use of the school or schools under its charge, and the said board shall have power to purchase the text-books selected or contracted for, and provide for the loan, free of charge, or sale at cost of such text-books to the pupils.

No adoption or contract must be for less than three nor more than five years, within which the text-books shall not be changed.

Whenever five or more legal voters of any district petition the board of school trustees to submit to vote the question of free text-books it is the duty of the trustees to call a meeting with ten days' notice. The question may come up at an annual meeting with like notice. If favored by a majority vote, the trustees shall provide free text-books out of the school funds.

The temperance lessons are obligatory, and the superintendent of public instruction and the presidents of the normal schools are directed to recommend a suitable text-book and furnish it at cost to the several school districts.

Nebraska, 1897.—It is made the duty of school boards to purchase all text-books necessary for the schools, and they are authorized to make contracts with publishers for terms not exceeding five years at prices not exceeding those for any individual or corporation in the United States, and with guaranty of any reduction made anywhere during life of the contract.

Publishers are to file price lists and bonds of \$2,000 to \$30,000 with the State superintendent of public instruction, who prepares copies of the lists, and sends them, as well as forms of contracts, through the (elected) county superintendents, to all districts.

All text-books purchased by district boards are held as the property of the district, and loaned to pupils free of charge, the pupils being held responsible for any damage, loss, or failure to return the books in due time and to the person designated by the board.

Any parent or pupil may purchase from the board necessary books at cost price. The board may designate a local dealer to handle the books for the district, with such increase above contract price to pay cost of transportation and handling as may be agreed upon.

New Hampshire, 1893.—Each town constitutes a single district for school purposes. The school board prescribes the studies. The board is required to purchase text-books at the expense of the city or town and loan them to the pupils free of charge under such rules as it prescribes, making provision for sale at cost to such pupils as wish to purchase them for their own use.

New Jersey, 1895.—Each township constitutes a school district; each city, borough, and incorporated town constitutes a school district separate and distinct from the township school district.

It is the duty of the local board of education to provide text-books and loan the

same free to all the pupils, subject to orders and regulations of the board. The purchase is made from a free text-book fund raised by special school tax.

Any school officer accepting any consideration for promoting the sale of any books or violating the provisions of the act is deemed guilty of a misdemeanor, punishable by removal from office.

New York, 1898.—In common-school districts the inhabitants at an annual or special school-district meeting may appropriate money for the purchase of free text-books for indigent pupils. This is the extent of their power, and even this is rarely exercised. There are about 12,000 common-school districts.

The inhabitants of union free-school districts are authorized by statute to appropriate money for the purchase of free text-books for the pupils residing in their districts. The proposition to be submitted to the meeting must be given and served upon every inhabitant prior to the meeting. This power is rarely exercised. There are about 700 union free-school districts, and probably scarcely 100 of them provide free text-books for all pupils.

The cities of the State by their charters are authorized to provide free text-books for all resident pupils. The books are loaned to be returned at the end of the term. No reports on the subject are made to the state department by districts or cities, but the belief is that about one-half the cities avail themselves of their charters for free text-books.

North Dakota, 1896.—The school board of any city, town, or district is empowered to select, adopt, or contract for text-books, also to purchase them and provide for the loan, free of charge, or sale at cost to the pupils.

On petition of a majority of the qualified electors the board must submit the question of providing free text-books to the next annual meeting, and on a majority vote it is the duty of the board so to provide.

Pennsylvania, 1897.—Immediately after the annual election of teachers in each school district and before the opening of the next term, there must be a meeting of the directors and teachers of each district, at which the directors decide upon a series of schoolbooks for exclusive use for the year. The school directors or controllers purchase text-books as required out of the school fund and furnish them free of cost for use in the schools, subject to the orders and provisions of the directors or controllers. No change in text-books must be made more than once in three years.

The Scriptures come under the head of text-books, and they should not be omitted from the list.

It is unlawful for anyone officially connected with the school system to promote the sale of any book or have an interest in such sale, under penalty of fine or imprisonment.

Rhode Island, 1896.—The school committee of each town prescribes the studies and purchases the text-books to be loaned to the pupils free of charge, subject to rules of the committee. A change may be made in the schoolbooks in any town by a two-thirds vote, of the whole committee, and, in the city of Providence, by a majority vote, provided that no change shall be made oftener than once in three years, unless by consent of the State board of education.

South Dakota, 1897.—The county board of education—consisting of the (elected) county superintendent, the superintendents of cities or towns, the county State's attorney, the board of county commissioners, and one person from each commissioner's district, selected by the school board of such district—selects and adopts all text-books for a term of five years, after receiving proposals and guaranties from publishers. The board of county commissioners contracts with publishers, designating a depository in the county where books shall be sold at not more than 10 per cent advance on cost. A provision is inserted in the contract that it becomes void as to any book when the State has published a corresponding book.

Each depository is put under bond and must make returns to the county auditor

monthly. On a written petition of the electors of any school corporation the board shall arrange to furnish free use of books. A safe bookcase is required. The books are to be the property of the school corporation, used only on order of the board.

Utah, 1896.—The State superintendent of schools, county superintendents, and the principal of the State normal school, or a majority of them in convention, decide what text-books shall be used, except in cities of the first or second class, not to be changed for five years, except for sufficient cause, to be decided at a special convention called for that purpose.

In cities of the first and the second class the boards of education have power to furnish and loan to pupils all text-books used by them.

Wisconsin, 1897.—At the annual meeting of every school district the question of providing free text-books must be submitted to popular vote.

The boards are required to determine what books shall be used in their respective districts.

COEDUCATION IN THE UNITED STATES AND IN FOREIGN COUNTRIES.

Coeducation, or the education of boys and girls in the same classes, is the general practice in the elementary schools of the United States. Exceptions to this rule are found in a few cities—less, apparently, than 6 per cent of the total number. In the majority of these cities the separation of boys and girls has arisen from the position or original arrangement of buildings, and is likely to be discontinued under changed conditions. Of the fifty principal cities enumerated by the census of 1890, four, namely, Philadelphia, Pa.; Newark, N. J.; Providence, R. I., and Atlanta, Ga., report separation of the sexes in the high schools only; two cities of this class—San Francisco, Cal., and Wilmington, Del.—reported, in 1892, separation in all grades above the primary. In six cities—New York and Brooklyn, N. Y.; Boston, Mass.; Baltimore, Md.; Washington, D. C., and Louisville, Ky.—both separate and mixed classes are found in all grades. Five cities of the second class, having a population of 8,000 or more, report separation of the sexes in the high schools, and ten cities of the same group separate classes in other grades. Of cities whose population is less than 8,000, nine report separate classes for boys and girls in some grades.

Coeducation is the policy in about two-thirds of the total number of private schools reporting to this Bureau and in 65 per cent of the colleges and universities. On November 14, 1900, the following vote was passed by the board of trustees of Clark University, Worcester, Mass., viz, "that the university will admit candidates for the degree of doctor of philosophy and will confer that degree without regard to the distinction of sex."

Foreign countries.—In England 65 per cent of the departments into which the elementary schools are divided have boys and girls in the same classes; in Scotland, 97 per cent. Statistics for Ireland show that 51 per cent of the national schools have a mixed attendance of boys and girls.

Separate education is the general policy in English schools of secondary grade, and where both sexes are admitted to the same school it is generally to separate departments. The royal commission on secondary education advocate the extension of the coeducational policy, and since the publication of their report (1895) experiments in this direction have noticeably increased.

In the British colonies, with very few exceptions, both mixed and separate schools are found. In Ontario all the schools are mixed. In Quebec the schools for English children are, as a rule, mixed, but in those for the French the sexes are separated. In the Australasian colonies the tendency to separate departments for boys and girls is noticeable in cities. In Cape Colony, while nearly all schools are mixed, separate schools for girls are encouraged.

In France custom and sentiment favor the separate education of boys and girls,

and the law requires every commune having above 500 inhabitants to establish a separate school for girls unless specially authorized to substitute therefor a mixed school. The attendance upon mixed schools slightly increased during the last decade, but not enough to indicate any decided change of sentiment in this respect. The mixed schools are seldom found in cities.

The department of the Seine, which is occupied by Paris and its environs, reported in 1891-92 for public schools only 0.2 per cent of the pupils enrolled in mixed schools, and for private schools 9.2 per cent.

In secondary schools, public and private, separate education is the universal rule.

Germany.—Separate education is the preferred policy in the German States, but is not practicable in the rural primary schools. According to statistics of 1891, in Prussia two-thirds of the children in the common schools were in mixed classes, but in the cities the proportion was only three-tenths. In Saxony only the two lowest classes are mixed, so that separation occurs generally at the tenth year of age—always by the twelfth.

Other continental countries.—Similar conditions prevail in the remaining countries of Europe, the tendency toward separation being most strongly marked in the Catholic countries. In Italy the law calls for separate schools for boys and girls, and if they attend at the same building it must be in separate departments, each provided with its own entrance door. The lowest classes, however, may be, and often are, mixed.

In Norway, and to a less extent in Denmark, girls are securing admission to secondary schools formerly reserved for boys.

The South American republics follow the precedent of the Latin states of Europe. Brazil, like Italy, requires separate schools for the two sexes. In 1888 the experiment of admitting boys and girls to the same class room was made in a few schools, but they were seated in different rooms outside of recitation hours.

Coeducation in the universities of Europe.—The adverse vote of the senate of Cambridge University upon the proposition to admit women to the university degrees fixes for the present the status of women with respect to the great English universities. The vote, which was taken May 21, 1897, stood 1,707 against to 661 for the resolution.

The university colleges established in England since 1868 are open to men and women. By the "universities act" of 1889 the Scotch universities were authorized to open their doors to women. Edinburgh admits them to the classes with men. Glasgow has affiliated Queen Margaret College for Women, and more recently (1895) opened all lectures in the faculty of arts to women. The University College of Dundee, affiliated to St. Andrews, is coeducational.

In France women have never been legally deprived of university privileges, and since 1863, when the first woman was enrolled in the Paris faculties, the number of women matriculates has been gradually increasing.

The universities and secondary schools of Italy admit students of both sexes to the same class, a policy at variance with that pursued in the elementary schools.

Women have recently been admitted to courses in the universities of Germany, Austria, and Hungary, special authorization being required in each individual case.

The University of Athens was open to women in 1890.

TEACHERS' SALARIES.

The list of city school systems in cities of over 8,000 inhabitants, as published in the Report of 1898-99, numbered 632. The revision of this list according to the figures of the Twelfth Census caused a reduction of the number to 568, a loss of 64 which had claimed populations of over 8,000. It being generally the case that the average salaries paid teachers and supervising officers in the small cities that were dropped from the list of last year are far below the average in all cities of over 8,000 inhab-

itants, to this change in the list is due the large apparent increase in the average salary for the cities of the country at large. In the case of some of the States, however, as in New Jersey and Illinois, the changes in average salaries can not be assigned to this cause, for, though four small cities were added to the list of the former, the average salary shows a marked increase over those of the previous year, and while Illinois, by the revision above mentioned, loses six cities, the average salary for the State shows a falling off from \$784.58 in 1898-99 to \$745.13 in 1899-1900. A notable salary change resulting from an actual improvement in the salary schedule appears in the figures for New York, which show an increase of \$137.17 over the average salary in this State for the preceding year.

Average annual salaries of teachers and supervising officers in cities of over 8,000 inhabitants, summarized by States, etc.
